U.S. ARMY NATICK LABORATORIES  
Natick, Massachusetts C1760

This report presents results of Contract DA19-129-AMC-664 (N)

Sponsored by  
OFFICE, CHIEF OF RESEARCH AND DEVELOPMENT  
Department of the Army

Monitored by  
Farth Sciences Laboratory  
U.S. Army Natick Laboratories

## FOREWORD

This report is one of the end-products of a series of studies that began in 1952 when the Office of The Quartermaster General awarded a contract to Cornell University for summarization of distributional data for insects and other arthropods of medical importance. The studies were planned in cooperation with personnel of the Office of the Surgeon General and the U. S. Department of Agriculture. Dr. Bernard V. Travis, Professor of Medical Entomology and Parasitology at Cornell University, has been the principal investigator since the inception of the series. A thorough search was made of the entomological literature, and for each country and major geographical region of the world a "summary report" was prepared, listing the reported occurrences and habitat data for medically important arthropods. These summary reports were placed on file at the Natick Laboratories and the Military Entomology Information Service, Walter Reed Hospital, where they are available for loan and reference.

By 1964 it became evident that changes in the field of entomology--both in knowledge acquired and in the distributions of some species--required updating of the material contained in the country summary reports. It was decided also that the material would be more useful if consolidated on a continental rather than a country basis. Contracts were let with Cornell University for accomplishing these two tasks simultaneously, and the present report for America North of Mexico is a result of this work. This is the fifth of six continental reports.

The distributions of the most important species have been mapped by the University of Pittsburgh's Department of Geography, and the maps will be published in an Atlas of Medically Important Arthropods, to accompany this and the other continental summaries.

The contract under which this work was accomplished was supported by funds from the Office of the Chief of Research and Development, Department of the Army. This contract was monitored by Dr. William C. Robison, Chief of the Geography Division, this laboratory. Dr. John J. Pratt, Jr., Head of the Applied Entomology Group of the Engineering Research Laboratory, was alternate project officer.

The following members of the staff at Cornell University assisted the authors in preparing this compilation: Eveline Anton, Editha G. Gagni, Erika Zeballos and Ruth Ereen, Librarian, Department of Entomology, Cornell University. Friscilla R. Lawrence typed the manuscript.

The Earth Sciences Laboratory is pleased to be able to present the results of the labors of Dr. Travis and his co-workers for the use of Army specialists in preventive medicine, public health officers, and entomologists.

## ABSTRACT

The occurrence of insects and other arthropods of medical importance in America North of Mexico is summarized on the basis of review of most of the available references in the scientific literature. The report includes, for each major group of arthropods, a listing of species and subspecies with biological and distributional data, tabulations of diseases or disease organisms transmitted, and literature citations.

The groups of arthropods included, with the number of species or subspecies in parentheses, are:

Mosquitoes (361), Black flies (234), Sand flies (13), Midges (122), Horse flies (554), Biting flies (4), Non-biting flies (45), Fleas (543), Bugs (30), Urticating and vesicating arthropods (9), Ticks (110), Mites (78), and Miscellaneous arthropods (17).

## ARTHROPODS OF MEDICAL IMPORTANCE IN AMERICA NORTH OF MEXICO

### INTRODUCTION

#### 1. Format of this report

As will be seen from the Abstract and the Table of Contents, the data in this report are presented according to arthropod groups.

For each arthropod group the data are presented in tables, one or two as required. In Table 1, which is the basic table for each arthropod group, are listed the arthropods, biological data, distribution, and documentary references. In Table 2 are summarized the disease organisms said by the author or authors to be transmitted by the arthropods.

After the above-mentioned tabular material there is, for each arthropod group, a section of Literature Cited, containing the complete citations referred to in the basic table (Table 1).

The format of the data sections of the report is explained below. At the end of this Introduction there are brief explanatory comments on synonymy, interpretation of statements, and the order of listings for any particular species in Table 1.

#### 2. Table 1 explained

For each group of arthropods (mosquitoes, black flies, etc.) its basic table, Table 1, lists for each species and subspecies the distribution (country or countries), together with any biological data, and the reference documenting each entry. We will explain this table by considering entries under each column heading in turn.

##### a. SPECIES

Under the first heading, SPECIES, is entered: genus, species, subspecies (if any), and describer.

The format for a typical entry under SPECIES is somewhat variable, depending on the information available for each arthropod group. Typically, the genera and species are listed in alphabetical order in each group. No entries are made for subgenera. However, the subspecies, varieties and forms are listed as they appear in the publications. The describer's name is given unless the author has not listed the name and it is not clear from the literature what the describer's name should be.

See note on synonymy at the end of this Introduction.

##### b. BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION

The basic data on Table 1 are presented under these headings. The entries in the table are made in the same order as the heading indicates, and are separated by the same punctuation mark, ";". "No data" is indicated by "---"; that is, there may be no data on BREEDING HABITATS or ADULT ACTIVITY. Under DISTRIBUTION, the third category of information, a number is entered; this number represents a country or island in America North of Mexico, which may be identified by consulting the Geographical Index immediately following this Introduction.

For example, the first entry on *Aedes aegypti* on page 2 (---;---;62°) means that there are no data on BREEDING HABITATS or ADULT ACTIVITY for Canada (number 62 under DISTRIBUTION, as identified in the Geographical Index) for the particular species, although the indicated reference (Downe et al.) shows that the species occurs there.

Further comments on each part of this heading follow:

BREEDING HABITATS: No entry is made (as indicated by "----") unless the author makes clear and specific statements. The data concerning the biology of the immature forms are quite sparse, except for mosquitoes.

ADULT ACTIVITY: Again, no entry is made (as indicated by "----") unless the author makes clear and specific statements. Except for mosquitoes, the authors present little biological data for adult arthropods.

DISTRIBUTION: As indicated by the heading, the third category of information is DISTRIBUTION and the entry in the table consists of one or more numbers. These numbers represent countries or islands in America North of Mexico and may be identified by referring to the Geographical Index. All entries in this report use these numbers (in the DISTRIBUTION column of both Table 1 and Table 2) instead of the full country or island name. For example, 62 is the number for Canada. Where the authors have not recorded a specific country, an inclusive number is used. For example, 351 is the number for North America. For explanation of symbols attached to the country numbers in this column, see paragraph c immediately below.

c. Symbols attached to the country number or to a reference date

In the DISTRIBUTION column, the country number may have a symbol attached to it, e.g., 52\* or 62°. In the DATE column, the date may have a symbol attached to it, e.g., 1936+.

Symbol \* after a country number indicates that the species is said by the author to transmit a disease organism to man. For example, on page 2 of this report, the second entry on *Aedes vexans* ends with "... 323\*\*". This means that the species in the United States (country 323 in the Index) is said to transmit a disease organism to man. When this symbol is used, the species of arthropod and the disease transmitted are entered in the table immediately following; that is, such entries in Table 1 are summarized in Table 2. Where two asterisks (\*\*) appear, they refer to two separate diseases.

Symbol ° after the country number indicates that the species is said by the author either to bite or directly annoy man. For example, on page 2 of this report the first entry on *Aedes vexans* ends with "... 62°". This means that this particular species in Canada (country 62 in Geographical Index) is said by the author either to bite or annoy man. These entries are not summarized, as are those marked "\*" above.

Symbol + after a reference date indicates that the record is an unconfirmed entry. In this report there are only two entries with this symbol; they are on pages 29 and 53. This means that these entries need further confirmation.

d. (GENERAL STATEMENTS)

In addition to the three main categories of information as described above, the column heading indicates that there may be general statements. If so, this entry is made after those of the three main categories and is enclosed in parentheses, exactly as the column heading indicates. This may be a statement for either the various countries or continents or for the various species. For example, on page 2 of this report, the third entry ends "... (Forest pools, ditches, excavations)".

e. AUTHOR and DATE

Every entry in Table 1 is documented by an author (or a senior author) and date of publication. The AUTHOR and DATE (year of cited publication) are entered in the last two columns of Table 1. (The complete literature citation is given, for each arthropod group, in the section immediately following the tables.)

3. Table 2 explained

As noted in 2c, all listings marked "\*" in a table are summarized for the particular species of arthropod, in the table immediately following, giving the country or countries where occurring, and the disease or disease organism transmitted.

Table 2 summarizes such items from Table 1. For example, on page 2 of this report (Mosquitoes, Table 1) the next to the last listing ends "... 323\*\*". We note on page 3, under the same species, another listing ending "... 323". These and similarly marked listings are summarized in Table 2, page 98. Besides the SPECIES and DISTRIBUTION, the table also gives information on DISEASE OR DISEASE ORGANISM. Entries in these columns are discussed below.

a. SPECIES and DISTRIBUTION

The SPECIES is, of course, that indicated in Table 1, and the DISTRIBUTION column summarizes all the numbers (i.e., countries or islands) that are marked "\*" listed under DISTRIBUTION in Table 1 for this particular species.

b. DISEASE OR DISEASE ORGANISM

Under this heading there are four subheadings (VIRUS & RICKETTSIA; PROTOZOA; HELMINTHS; OTHER). The subheading itself may be broken down, where necessary. For example, on page 98 (Mosquitoes, Table 2), the first subcolumn (VIRUS & RICKETTSIA) is broken down as: Dengue and Yellow fever, with numbers indicating the appropriate distribution.

4. Literature Cited section explained

At the end of each arthropod section there is a complete list of Literature Cited, as referred to in the last column of Table 1 (AUTHOR and DATE).

The abbreviations of the periodicals follow the World List of Scientific Periodicals.

5. Special comments

a. A note on synonymy

The problem of attempting to straighten out synonymy of scientific names is beyond the scope of this report. Except for a few species, the scientific names, as used by the authors, are entered in the tables. In a few cases we have followed the synonymy of an acceptable monograph. As there is no universal agreement among taxonomists, the responsibility of synonymy must be referred to the interpretation of each specialist.

b. A note on interpretation of statements

An attempt has been made to avoid interpreting the published statements. This has been found difficult in matters concerning disease transmission; thus it is often clearer if we use the author's own words. In general, it has been found that a few authors make unqualified statements concerning the vectors. Also, as one might expect, most of the statements are based on epidemiological evidence and not on actual transmissions.

c. Order of listings for same species in Table 1

If there is more than one country number for a single entry, the country numbers are arranged in ascending order. For example, on page 4, the fourth listing reads: "... 5, 62, 126 . . ."

When there is more than one entry (that is, citation with Author and Date) under a single species and describer, the entries are listed in ascending order of country number, based on the first (lowest) number for each entry. For example, on page 2, under *Aedes aboriginis*, the first listing is 5, the next 5, 62, then 62 (four listings), and finally 323. Since all countries mentioned by a single author are listed in that entry, the countries under a given species are not necessarily all in numerical order when there is more than one entry for that species.

## GEOGRAPHICAL INDEX

In 1962 a world-wide geographical Index was published\* listing countries and major regions in alphabetical order, and assigning to each a number. The following list consolidates the countries and certain other geographical entities of America North of Mexico from that Index. These are shown on the adjacent map.

The numbers of countries and other localities in America North of Mexico are listed in order. For example, when 62 is entered, it stands for Canada, and 323 stands for the United States. Where the author or authors have not recorded a specific country, an inclusive title is entered, e.g., 351 for North America. This is the purpose of the Index: to identify the countries or other locations represented by numbers under DISTRIBUTION (Table 1 or Table 2).

Ross: Classification and coding system for compilations from the world literature on insects and other arthropods that affect the health and comfort of man, Technical Report ES-4, U.S. Army, Quartermaster Research & Engineering Center, Natick, Mass., 259 pp., 1962.

GEOGRAPHICAL INDEX

- 5. Alaska
- 7. Aleutian Islands
- 26. Arctic Circle, within the (Inclusive title)
- 62. Canada
- 126. Greenland
  - Newfoundland, indexed under Canada, 62
- 250. Queen Charlotte Islands
  - Queen Elizabeth Archipelago, indexed under Canada, 62
- 260. Saint Pierre and Miquelon Islands
- 323. United States (excluding Alaska and Hawaii\*)
- 327. Vancouver Island
- 351. North America (Inclusive title)

---

\*Hawaii is indexed in Technical Report ES-36, "Arthropods of Medical Importance in Australia and the Pacific Islands".

ARTHROPOD DATA

A. MOSQUITOES

The Mosquito entries include information on the biology of the larvae and adults in addition to distribution and disease transmission. There are fewer species of mosquitoes (361) in America North of Mexico than in the other continents. However, the tabulations show that almost all species have a large documentation of their biology.

So many mosquitoes will bite man that an effort has been made to make a complete listing of mosquito species and subspecies. The synonymy is a difficult problem in this group; thus, some species and subspecies in the list are not valid names.

TABLE 1 - MOSQUITOES

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes abfitchii</i> (Felt)	---; meadows, timbered parts of river; 323	Headlee	1945
<i>abcriginis</i> Pyar	Roadside borrow pits devoid of vegetation; ---; 5	Gjullin et al.	1961
	---; ---; 5, 62 (Forest pools, ditches, excavations)	Dyar	1928
	Snow pools in deep woods; deep forests, rare; 62°	Hearle	1926
	Semi-stagnant pools, drainage pools, artificial pools; ---, 62	Dyar	1920
	---; March, May-July; 62	Hearle	1927
	---; ---; 62 (Early spring pools of foul character, in deep forest and shaded by large trees, bite by day or night)	Dyar	1921
	Shallow waters containing vegetation debris; May, June; 323	Irwin	1943
	Small temporary rain pools; common in some areas; 323	Stage et al.	1952
	Early forest pools; ---; 323	Matheson	1944
<i>abserratus</i> (Felt & Young)	Shallow temporary pool in swampy woodland wagon track; May; 62	Irwin	1926
	---; ---; 62, 323 (Ditches, heath and alder bogs, bite man, April-June)	Steward & McWade	1961
	Low, swampy woodlands and mountain pools; April-May; 323	Headlee	1945
	---; bite all day, June; 323°	Wallis	1960
<i>aegypti</i> (Linnaeus)	---; ---; 62°	Dowme et al.	1963
	Domestic, artificial containers in or near dwellings, treeholes, underground street catch basins, prefer fairly clean water; troublesome house pest, all day mostly early morning and late afternoon; 323**	King et al.	1960
	Just above the water line or on the surface of the water; vigorous biters and attack man quietly, all year; 323	Matheson	1944

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES aegypti</i> (Linnaeus) (cont.)	Lake shores; carrier and possible vector of yellow fever and dengue fever; 323	Quinby	1941
	More numerous in the substandard areas of towns and cities, prefer abandoned automobile tires to other artificial containers; ---; 323	Tinker	1964
	---; bites man severely on knuckles, ankles and elbows; 323	Komp	1923
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	---; experimentally infected with <i>Muchlereria bancrofti</i> ; 323	Eyles & Most	1947
	---; light trap; 323	Chamberlain et al.	1964a
<i>aestivalis</i> Dyar	---; Sept; 62	Dyar	1920
	In flood water of lakes, June-July; 323	Dyar	1922
<i>albertae</i> Dyar	Early spring ground pools; ---; 62	Dyar	1922
<i>aldrichi</i> Dyar & Knab	Temporary snow pools; ---; 5	Tulloch	1934
	Cottonwood swamps, river flood-pools; in woods, houses, bite all day, mostly at dusk, vicious and painful, very abundant; 62°	Hearle	1926
	Flooded low areas, overwinter in river border; ---; 62	Hearle	1921
	---; June-Sept.; 62	Hearle	1927
	---; ---; 62 (Flood pools shaded by bushes, in river bottoms)	Dyar	1921
	Ground depressions in the cottonwood bottom lands in river valley which will be flooded by the spring freshets, backwaters of streams with little or no current; enters houses; 323°	Mail	1934
<i>allenii</i> Turner	Tree holes; ---; 323	Matheson	1944
	---; June-July; 323°	Rozeboom	1942

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>aloponotum</i> Dyar	Cold early spring pools; forested coastal regions; 62, 323 ---; in woods, May-Aug., fairly common; 62°	Dyar Hearle	1928 1926
<i>alpinus</i> (Linnaeus)	Summer ground pools; ---; 5 ---; ---; 5, 62, 126 (Snow and ice pools)	Dyar	1922 1928
<i>altiusculus</i> Dyar	Early snow pools on mountain meadows; June, Aug.; 323	Dyar	1922
<i>atlanticus</i> Dyar & Knab	Shaded woodland or clear, grassy pools, shallow pool in marl soil with thick growth of <i>Sesuvium</i> ; severe biter in and near woods, abundant; 323° Pot hole; bites by day; 323 Temporary pools; March-Nov.; 323 Wagon-wheel rut along the border of a freshwater swamp; ---; 323 Temporary or semi-permanent rain pools in wooded areas; ---; 323 ---; light trap; 323	King et al. Bick Carpenter et al. Darsie et al. Rozeboom Dow et al.	1960 1946 1946 1951 1942 1964
<i>atlanticus</i> <i>tormentor</i> Dyar & Knab	---; April-Jan.; 323 ---; light trap; 323	Carpenter & Chamberlain Chamberlain et al.	1946 1964 a
<i>atropalpus</i> (Coquillett)	---; ---; 62, 323 (Rocky streams, overflow pools, rain-filled depressions, adults resting under rock edges and biting during daytime hours, experimental vector of equine encephalitis, Feb., Mar., Sept.-Dec.) ---; ---; 62. Tree holes; ---; 323 (Rock holes and small pools along rivers and streams, especially after spring floods, persistent biters, June-Sept.) Rock holes along mountainous streambeds, in rocks away from streams, pot holes, tree holes, artificial containers; rare; 323° Abandoned septic tank; ---; 323	Carpenter et al. Steward & McWade King et al. King et al.	1946 1961 1960 1939

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes atropalpus</i> (Coquillett) (cont.)	Pot holes and rock holes along streams and lakes, filling of rock pools by rains, high water or waves, attached to rock above water level; ---; 323	Lowry	1929
	Small pot holes along rapids in rivers, rock pools along lake shore; ---; 323	Owen	1937
	Pot holes near falls; ---; 323	Dickinson	1944
	Swampy area; ---; 323	Knutson	1943
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	---; experimentally infected with <i>Wuchereria bancrofti</i> ; 323	Evies & Most	1947
	---; June-Sept.; 323	Matheson	1944
	---; Aug.-Oct.; 323	Carpenter et al.	1945
<i>aureus</i> (Coquillett)	---; June; 62 (Early spring pools, rare)	Dyar	1921
	---; ---; 62 (Roadside and woodland pools, more often in bogs and marshes, bite freely all day and in the evening, April-mid-summer)	Steward & McWade	1961
	Early spring woodland pools, associated with cranberry bogs; bite in shade during day and early evening; 323°	Matheson	1944
	Large and permanent woodland pools, meadows, lakes; Mar.-Aug., bites fiercely at times; 323	Headlee	1945
	Temporary pools in spring, especially open bogs and swamps; rare; 323	Lowry	1929
	Early spring snow-water pools; Sept.; 323	Dickinson	1944
	Roadside pools derived from melting snow; ---; 323	Owen	1937
	Flooded, river pools, in cranberry bogs; ---; 323	Knutson	1943
	Shallow waters containing vegetation debris; ---; 323	Irwin	1943
	Open marsh pool, ditches; ---; 323	Lake	1953
	Near cypress swamp; ---; 323	Ross	1947

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>barri</i> Rueger	---; ---; 62, 323	Stone	1965
<i>bicinctatus</i> Thurman & Winkler	Early spring flooded meadows; ---; 323°	Freeborn & Bohart	1951
<i>bimaculatus</i> (Coquillett)	Muddy rain pools; Aug.; 323 Roadside pools; ---; 323 ---; fierce biter, common; 323° ---; rare, June, Sept.; 323	Rozeboom Matheson King et al. Beyer	1942 1944 1939 1923
<i>cacothinus</i> Dyar	---; ---; 323°	Dyar	1923
<i>callithotrys</i> Dyar	---; June; 5. ---; June, July; 62	Dyar	1920
<i>campestris</i> Dyar & Knab	---; ---; 5. (Pools, water filled depressions containing alkaline and rich organic contents, rest in grass and bite when disturbed) Common in alkaline water rich with organic matter; bites when disturbed, bites readily in hot afternoons and in the evening; 62 Shallow open pools in marshy meadow; invade living quarters to bite, active all day through sunset; 62° Temporary snow and rain pools; prairie, open grassland; 62 Irrigated areas, pools with high salt concentration; May-Sept.; 62 Grassy low-lying places; ---; 62 Open pools, ditches; ---; 62 ---; ---; 62. ---; abundant; 323 (Bite by day or night) Shallow pools filled from melting snow or early vernal rains; semi-arid plains and prairie, abundant during late spring and early summer, bite freely at any time, most active in the evening and early morning; 323°	Steward & McWade Rempel Twinn et al. Twinn Shemanchuk Rempel McLintock Dyar Rees	1961 1953 1948 1949 1959 1950 1944 1921 1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS: ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>campbelli</i> Dyar & Knab (cont.)	Semi-arid plains, prairies, alkaline waters, overflow of irrigation water, depressions; active in evening and morning hours, severe biter; 323	Matheson	1944
	Only in the spring; feed at any time but are more active at dusk, May to Nov.; 323	Rees	1934
	Open, unshaded waters; bite all day and during darkness, rare; 323	Stage et al.	1952
	Early spring snow-water pools; April; 323	Dickinson	1944
	Alkaline pools in arid plains; ---; 323	Mail	1934
	Marsh; ---; 323	Owen	1937
<i>canadensis</i> (Theobald)	---; ---; 5°	Gjullin et al.	1961
	Abundant near the northern edge of the aspen grove lands, rare in the coniferous forest zone; bite readily and most annoying in dense poplar bluffs, May-July; 62°	Rempel	1953
	Woodland pools; in woods, severe biter, Sept., very rare; 62	Hearle	1926
	Open pools; in houses; 62	McLinton	1944
	---; April, July-Sept.; 62. ---; ---; 323. ---; in forested regions; 351 (Any standing water, large or small, in and near woods, bogs and swamps in forest regions, ready biters, all summer)	Steward & McWade	1961
	---; ---; 62. Artificial pools; readily attack towards the evening, pest in woodlands; 323° (Woodland pools with decaying leaves, roadside puddles, spring fed pools, cranberry bogs, sphagnum bogs, pools, wooded swamps and open meadows, ice-covered ponds, common in May-June)	Matheson	1944
	---; ---; 62, 323 (Transient ground puddles, open woods, pools and roadside ditches, active after sunset, bites low near the ground)	Dyar	1922
	---; ---; 62, 323 (Temporary ground pools in shade)	Dyar	1928

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES canadensis</i> (Theobald) (cont.)	Temporary forest pools flooded by melting snow, depressions with decaying leaves and debris, in open meadow at high elevation; bites severely, mostly late afternoon in large wooded areas, rare in some areas; 323°	Stage et al.	1952
	Woodland pools, seepage water from spring floods, post oak flats along river, stump holes, small sink holes, oxbows of small woodland streams; fierce biter, bites readily in shade all day; 323	Ross	1947
	Marshy ground pools near edge of forests; forested areas above 8000 feet elevation, bites during daytime near shaded woodland pools; 323	Harmston	1949
	Woodland pools containing decaying leaves, in small streams and ditches; rarely enter houses; 323	Carpenter et al.	1946
	Woods, pools, streams; abundant March; 323	Horsfall	1936
	Roadside ditches, ground puddles, pools caused by overflow of river with bottoms covered with dead leaves and grass; ---; 323	Mail	1934
	Temporary or intermittent waters of spring pools and stream bed pools, artificial containers floating in city dumping pond; ---; 323	Rowe	1942
	Alkaline pools, ponds, lake margins in valley, irrigated field; ---; 323°	Chapman	1966
	In pools on sphagnum mats, cold permanent swamp pools; ---; 323	Irwin	1943
	Shallow, semi-permanent ponds in open fields; ---; 323	Good	1945
	Pasture pools, heavy rain-filled pools; ---; 323	Lowry	1929
	Temporary rain pools in the open; ---; 323	Dickinson	1944
	Fresh water pond, cranberry bog; ---; 323	Bast	1963
	Swamps, root holes; ---; 323	Knutson	1943
	Shaded pools; ---; 323	Owen	1937
	Salt marsh; ---; 323	Ferrigno & Bast	1962

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes canadensis</i> (Theobald) (cont.)	---; all year; 323 ---; common; 323	Carpenter & Chamberlain King et al.	1946 1939
<i>canadensis</i> <i>canadensis</i> (Theobald)	---; ---; 5, 62, 323 Woodland pools, shaded pools with dead leaves, roadside puddles, spring-fed pools, cranberry bogs, pools in open sphagnum bogs, wooded swamps and open meadows, water pits, receding river flood waters; abundant; 323°	Stone King et al.	1965 1960
<i>canadensis</i> <i>mathesonii</i> Middlekauff	---; ---; 5 Deep shaded fox holes; rare; 323	Stone King et al.	1965 1960
<i>cantans</i> Meigen	---; ---; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
<i>excitator</i> (Coquillett)	Brackish water; ---; 62 Salt marshes; ---; 62 ---; ---; 62 (Salt coastal pools)	Twinn Hearle Dyar	1944 1926 1928
	Salt marshes, brackish and fresh water pools; bite by day in open at night in houses, March; 323°	Wallis	1960
	Coastal marshes, along margins of streams and rivers, in cranberry bogs, saline pools; ---; 323*	Matheson	1944
	Brackish water in salt holes on marsh; ---; 323	Stearns et al.	1933
	Drainage from highlands; ---; 323	Headlee	1945
	---; during day in shrubbery or long grass, flies at dusk, persistent and vicious biter; 323	Lowry	1929
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	---; April-Oct.; 323	Barnes et al.	1950
* <i>cataaphylla</i> Dyar	Shallow temporary or semi-permanent pool; ---; 5 ---; ---; 5, 323 (Early spring pools, males swarm in open country, bites both day and night)	Gjullin et al. Dyar	1961 1922

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>cataphylla</i> Dyar (cont.)	Small grassy depressions sheltered by bluffs; active day and night; 62°	Rempel	1953
	Irrigated areas; ---; 62	Shemanchuk	1950
	---; April-Aug.; 62	Hearle	1927
	---; very rare; 62	Hearle	1926
	---; forest; 62	Twinn	1940
	---; ---; 62 (Grassy pools along riverbanks)	Dyar	1928
	Snow and flood water pools in the wooded sections of the mountains at elevations usually above 7,500 feet; May-July, Aug., bites readily, important pest in high mountain areas; 323°	Rees	1943
	Flooded pools in wooded regions; common in early spring-Aug.; 323	Matheson	1944
	Mountains; vicious biter also in sunshine, rare; 323	Stage et al.	1952
	Snow pools in wooded sections of mountains, grassy pools along river banks; ---; 323	Mail	1934
	---; mountains at 10,000 feet elevation, bite readily in the wooded areas; 323	Harmston	1949
<i>cataphylla</i> <i>cataphylla</i> Dyar	---; ---; 5, 62, 323	Stone	1965
<i>cataphylla</i> <i>pacificensis</i> Hearle	---; ---; 62	Stone	1965
<i>cineroborealis</i> Felt & Young	Shallow leafy woodland pools; May and June; 62	Twinn	1926a
	---; ---; 62. ---; April, May; 323 (Early spring pools, in forest and leafy shaded ditches along roads)	Dyar	1922
	---; ---; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
<i>cinereus</i> Meigen	Vernal snow-melt pools; ---; 5°	Frohne	1954
	---; abundant; 5	Frohne	1956
	Cottonwood flood swamps, shallow protected surface pools and ditches with clean water, snow and rainpools; common; 62	Hearle	1926

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES cinereus</i> Meigen (cont.)	Open woodland flooded by river; painful biter, May-July; 62°	Twinn	1926a
	Open pools, sloughs, ditches; woods; 62	McLintock	1944
	Common at the northern edge of the aspen grove region; ---; 62	Rempel	1953
	Flood pools, along river banks; ---; 62	Dyar	1920
	Irrigated areas; ---; 62	Shemanchuk	1959
	---; ---; 62 (Woodland pools, rain puddles, marshes, and bogs, April)	Steward & McWade	1961
	Shaded pools at high and low altitudes; attack by day and at dusk close to the ground and underbrush, March, abundant; 323	Stage et al.	1952
	Floodwater and woodland pools; in weeds and grasses near dwelling. a pest in some areas, rare; 323	King et al.	1960
	Small waterholes in glacial bogs and marshes, woodland pools; crepuscular; 323	Ross	1947
	Temporary grassy pools; peak May; 323	Knutson	1943
	Pools in coniferous forests, woodland pools in the hardwood region, temporary rain pools which are unshaded, open bogs, marshes; ---; 323	Owen	1937
	Shallow waters containing vegetation debris, margins of deeper pools; ---; 323	Irwin	1943
	Spring woodland pools with decaying leaves; ---; 323	Matheson	1944
	Various temporary ground pools, rain-filled pools; ---; 323	Lowry	1929
	Early spring snow-water pools, swamp pools; ---; 323	Dickinson	1944
	Seepage water, roadside ditches; ---; 323	Mail	1934
	Shallow woodland pools; ---; 323	Stearns et al.	1933
	---; along the foothills of higher mountain ranges near wooded streams, persistent biter in wooded areas during daytime; 323°	Harmston	1949

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>cinereus</i> Meigen (cont.)	---; April-Oct.; 323 ---; light traps; 323	Fellton et al.	1950
<i>cinereus</i> <i>form fuscus</i> Osten Sacken	---; June-Aug.; 62	Carpenter et al.	1945
<i>cinereus</i> <i>hemiteles</i> Dyar	Early spring pools, shallow grassy and sunlit or in deep forest; rather walk than fly, crawl on vegetation and attack the legs; 323°	Freeborn	1926
<i>classicus</i> Dyar	Ground pools; May; 323	Dyar	1922
<i>cromoris</i> (De Geer)	Breeds in water at 2°-3° C., dry basins of vernal pools or along dried margins of less transient standing water, brushy inclusions of tundra and alpine meadows; ---; 5°	Frohne	1956
	Shallow, temporary pools; forest; 5	Gjullin et al.	1961
	Area covered with brushy shrub, moss and grass; ---; 5	Gjullin & Cross	1951
	Temporary snow pool; ---; 5	Tulloch	1934
	---; May-Aug.; 5	Weber	1950
	---; abundant; 5	Hopla	1965
	---; ---; Swamps and marshes; ---; 323 (Early spring pools, remain in shade and bites after dark)	Matheson	1944
	Oxbow lakes and bog pools in shaded spruce forest with decaying logs and branches, rock pools with humus and moss; bite in spruce forest and willow thickets, open tundra meadows and mountain valleys at 1000 feet elevation all day and early evening, one of the most abundant and worst pests; 62°	Jenkins & Knight	1950
	Shallow snow pools in swampy coniferous forest; bites man on a sunny day and also in the evening; 62	Twinn et al.	1948
	---; deep wooded valley with a large stream and unusually dense balsam fir and black spruce; 62	Brown	1951

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>cormoisi</i> (De Geer) (cont.)	---; April-Aug.; 62 Flooded mountain, meadows and woodland pools left by melting snow, mountain lake margins; high mountain areas, vicious biters, especially at dusk, abundant; 32° Spring pools in woodlands and swamp; common in wooded areas, flying around garden and porches; 323 Natural pools, early-drying pools among aspens, beach pools and shallow swamp pools; April-Aug.; 323 Shallow depressions; prefers shade; 323 Low-lying grassy pools about the lake and in the edges of small ponds; ---; 323 Woodland pools filled by melting snow with bottom covered with leaves; ---; 323 Temporary pools in coniferous forests; ---; 323 ---; bite in wooded areas during daytime and open areas at evening; 323	Hearle Stage et al. Lowry Irwin Freeborn & Bohart Dyar Carpenter Owen Harmston Chapman	1927 1952 1929 1943 1951 1924 1950 1937 1949 1966
<i>cormoisi</i> <i>cormoisi</i> (De Geer)	Shaded overflow pools adjacent to streams, shaded streambeds; pine and aspen situations, 5,000-7,000 feet elevation, March-June; 323°	Chapman	1966
<i>cormoisi</i> <i>nevadensis</i> Chapman & Barr	Open and shaded pools in mountains at 7,200-8,700 feet elevation, overflow pools adjacent to streams, open meadow pools of snow melt; annoying at 8,000-9,500 feet elevation, May-June; 323°	Chapman	1966
<i>cormoisi</i> <i>sahdensis</i> Dyar	Deep mountain meadow pools; prevalent above 5,000 feet elevation; 323	Freeborn	1926
<i>coquilletti</i> Robineau-Desvoidy	---; ---; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
<i>currieli</i> Coquillett	Rock pools with brackish water and salt marshes; along the Coast and outlying islands; 62° ---; May-Aug.; 62 (Early ground puddles, persistent biter, abundant after sunset)	Hearle Dyar	1921 a 1921

TABLE 1 - MOSQUITOES (continued)

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes</i> <i>dixdens</i> Howard, Dyar & Knab (cont.)	Shallow waters containing vegetation debris; April; 323	Irwin	1943
	Early spring pools at high altitude in dense forest, flooded pool of river; ---; 323	Mail	1934
	Kettle hole; ---; 323	Wiedhass	1952
<i>discalis</i> (Coquillett)	---; rare, June-August; 323	Headlee	1945
<i>dorsalis</i> (Meigen)	Shallow weedy pool with alkaline water and rich in organic matter, a large dumping ground over- grown with wild barley and alkali grass, decaying hay straw, and manure; possible vector of Western equine encephalomyelitis, common in July-Sept.; 62°	Rempel	1953
	Coastal rock pools with high salinity, large salt marsh; seacoasts and islands, March-Aug.; 62	Hearle	1921
	Irrigated areas, temporary pools with alkaline water; in short-grass pastures all day, May- Sept.; 62°	Shemanchuk	1959
	Temporary snow and rain pools, tidal pools; prairie, open grassland; 62	Twinn	1949
	Alkaline pools in open pasture areas; ---; 62	Rempel	1950
	Open pools, ditches; ---; 62	McLintock	1944
	---; dominant in the great plains; 62. Rice- fields and flood waters; spring and autumn; 323 (Salt marshes of the coastal areas, open and unshaded, alkaline, saline and fresh water, especially irrigation)	Matheson	1944
	---; ---; 62, 323 (Coastal salt marshes, inland flood and irrigation water, vicious biters, attack day and night but most active toward the evening and on calm cloudy days)	Carpenter et al.	1946
	Open sunny areas flooded by saline, alkaline or fresh water, salt marshes; most abundant and troublesome in irrigated meadows and inundated grasslands, enter houses, attracted to light traps, naturally infected with western equine encephalomyelitis and St. Louis encephalitis viruses, experimental vector of Japanese B and California encephalitis viruses; 323°	Stage et al.	1952

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
AEDES <i>dorsalis</i> (Meigen) (cont.)	Water of high alkalinity, water or damp depressions, roadside ditch, irrigation ditch, open, temporary grassy pool, semi-permanent pools containing cattails and other hydrophytic vegetations, woodland pools deeply shaded with willows; April-Nov.; 323	Mail	1934
	Swampy areas, irrigated regions, lake surrounded by extensive flood areas, alkaline and fresh water, grassy pools; enter houses occasionally, vicious biter, in light trap, capable of transmitting western equine encephalitis; 323	Tate & Gates	1944
	Open ground pools, particularly in salt grass flats flooded with rain or irrigation water; bites at any time, most common pest in the valleys and deserts; 323	Rees	1934
	Temporary waters of stream bed pools, pasture pot holes and flooded areas, fluctuating marginal areas or marshes; experimental transmitter of equine encephalomyelitis; 323	Rowe	1942
	Water contaminated by industrial waste, saline waters from oil wells, seepage areas from factories; fierce biter, crepuscular; 323°	Ross	1947
	Inland fresh water and salt marsh drainage ditches; Jan.-March; 323	Herms	1934
	Brackish and fresh water; rare; 323	King et al.	1960
	Salt marshes, open, sunny pools subject to intermittent flooding; ---; 323	Freeborn & Bohart	1951
	Along margins of salt lake with 12% salinity; ---; 323 (Tolerate semi-exposed situations, prairies, shallow weedy alkaline pools rich in organic matter)	Steward & McWade	1961
	Foul, stagnant pools contaminated with sewage; ---; 323	Olson & Keegan	1944
	Temporary, exposed pools, foul, stagnant water; ---; 323	Owen	1937
	Alkaline pools or lakes; ---; 323	Dickinson	1944
	Salt water pools; ---; 323	Rozeboom	1942

<i>galloisi</i> Yamada	---; ---; 62	Stone	1961
<i>gonimus</i> Dyar & Knab	---; June; 323	Dyar	1922
<i>grossbecki</i> Dyar & Knab	Early spring pools; fierce biters, rare; 323°	Carpenter et al.	1946
	Semi-permanent woodland pools in sloughs; Jan., Feb.; 323	Wirth	1947
	Post oak flats along river; April-June; 323	Ross	1947
	Woodland pools and marshes; spring; 323	Wallis	1950
	Lake margins; Aug.; 323	Fellton et al.	1950
	Breeds away from the seacoast; ---; 323	Darsie et al.	1951
<i>hendersoni</i> Cockerell	---; ---; 323	Stone	1965

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i>			
<i>newitti</i> Hearle	---; July and Aug.; 62	Hearle	1923
<i>hexodontus</i> Dyar	Semi-permanent pools; tundra; 5°	Gjullin et al.	1961
	Carex marshes; ---; 5	Knight	1951
	Arctic tundra, clear water in alpine meadows at 1,000 feet elevation in unshaded snow melt pools and rock pools with much sedge, grass and sphagnum moss; pests in mountains, tundra meadows and near snowbanks, bite all day in sun and shade, June and July; 62°	Jenkins & Knight	1950
	Open or partially shaded meadow pools, ponds, marshy lake margins at 6,300-10,000 feet elevation; major pest in mountainous areas. March-July; 323	Chapman	1966
	Shallow pools in meadows or marshes or along streams; active after sunset behind bushes and tree trunks; 323	Dyar	1922
	Spring pools, hoofprints, tiny depressions of seepage areas, snow water in flooded meadows; ---; 323	Matheson	19--
	Small pools; ---; 323	Freeborn & Bohart	1951
	---; vicious biter in shade by day, common in some areas; 323°	Stage et al.	1952
<i>hirsuteron</i> Theobald	Low wooded areas flooded in spring by river; troublesome biter; 62°	Twinn	1926a
	Exposed ditches; houses, bush, May-Aug.; 62	McLintock	1944
	---; ---; 62 (Flood pools, with dead vegetable matter)	Dyar	1928
	Sometimes in early woodland pools; June, July; 323	Lowry	1923
	Flood pools of river valleys, depressions containing leaves and grasses, rain-filled pools in woods, hollows filled with rank weeds and rubbish filled by seepage from river; ---; 323	Mail	1934

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes</i> <i>hirsuteron</i> Theobald (cont.)	Shaded forest pool, temporary rain pool, ---; 323 ---; ---; 323°	Owen Shields	1937 1918
<i>sinuensis</i> (Theobald)	Temporary snow and rain pools; prairie, open grassland: 62 ---; June and Aug.; 62 ---; ---; 62, 323 (Early spring pools, in open country, swarming over prominent objects after sunset) ---; ---; 62, 323 (Spring rainpools, in arid regions and river valleys without grass)	Twinning Hearle Dyar	1941 1927 1921
	Early in the spring in snow water pools or pools filled by early vernal rains, rock pockets filled with water from melting snow, pools showing a high alkalinity; open plains and low mountain regions, bite readily during the day, more active in the evening, April-May; 323°	Rees	1943
	Roadside of river overflow, flooded meadow; common on dry plains, May; 323	Dyar	1929
	Irrigated areas; abundant in some areas; 323	Stage et al.	1952
	Pools in grassy meadow; ---; 323	Dyar	1924
	---; troublesome pest in plain areas and lower mountain valleys, June-Aug.; 323	Harmston	1949
<i>impiger</i> (Walker)	Pools in sphagnum-heath bog, temporary pools; June-July; 5 ---; ---; 5° ---; ---; 5, 32, 323 (Snow pools in the treeless regions of the arctic, commonest and worst species of the far north) Grassy pool in poplar bluffs; ---; 62 ---; June-July, densely forested country; 62 ---; April, May and Aug.; 62 ---; ---; 62, 323 (Common in forested regions)	Gjullin et al. Frohne Steward & McWade Rempel Dyar Hearle Rempel	1961 1956 1961 1950 1920 1927 1953

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES impiger</i> (Walker) (cont.)	---; ---; 62 (In spring pools)  Large mat pool exposed to sun, beach pool; in wooded sections during day, about buildings in the evening, rare, May; 323  At 8000 feet elevation; Mar., June-July; 323°  Temporary pools shaded by hardwood timber, cold, shaded pools in the dense coniferous forest, early, temporary snow pools in the open; ---; 323  Pools in semi-wooded areas at high altitudes; ---; 323  Snow pools in woods and meadows; ---; 323  Earliest spring pools; ---; 323  ---; elevations of 6000 to 9000 feet, along mountain streams near willow growths; 323	Dyar  Irwin  Matheson  Owen  Stage et al.  Mail  Lowry  Rees & Nielson	1928  1943  1944  1917  1952  1934  1929  1951
<i>implacabilis</i> (Walker)	Bogs, forest pools in the surrounding low-lying areas; ---; 62  Temporary leafy pools; bite all day, Mar.-May, 323°  Sphagnum mats of shaded pools, tamarack and poison sumac bogs; crepuscular; 323  In sunlit pools, shaded swamp pools; ---; 323  Early cold woodland pools; June; 323  Early spring snow-water pools; ---; 323  ---; May-July; 323	Brown et al.  Knutson  Ross  Irwin  Lowry  Dickinson  Blickle	1951  1943  1947  1943  1929  1944  1952
<i>implicatus</i> Vockeroth	Brackish water along coast; ---; 5. Coniferous forests; ---; 62. ---; ---; 323 (Temporary puddles of snow and rain water, bite readily in the evening and in woods at any time)  Temporary pools; ---, 5°	Steward & McWade  Gjullin et al.	1961  1961
<i>inconspicuus</i> Grossbeck	Mountain, rock pool; Sept.-Oct.; 323	Headlee	1945

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes</i> <i>incompetitus</i> Dyar	Small slow-flowing streams in wooded valley and shallow woodland pools; bites readily in the woods by day, May; 62°	Rempel	1953
	Stagnant creek flowing through bluff country; ---; 62	Rempel	1950
	Snow water, at 4,300-8,200 feet elevation, open and shaded meadow pools and ponds, roadside ditches, open and shaded ponds, pool margins in foothills; principal pest in foothills and higher elevations, Feb.-Aug., 323	Chapman	1966
	Plains, open meadows and small pools in semi-wooded country from sea level to 6000 feet elevation, rain pools; prefer shade, abundant; 323	Stage et al.	1952
	Numerous in overflow pools along wooded streams; troublesome in wooded areas along foothills and higher valleys; 323	Harmstor	1949
	Spring pools in river valleys and edges of lakes, active after sunset, over bushes, and small trees; 323	Dyar	1922
	Overflow pools from irrigation ditches; fierce biter; 323°	Matheson	1944
	Flood pool, depressions along river banks in temporary pools; ---; 323	Mail	1934
<i>incompetitus</i> form <i>hesitans</i> Hearle	---; June and July; 62	Hearle	1927
<i>incompetitus</i> <i>mutatus</i> Dyar	---; April-June; 323	Dyar	1929
<i>inequitus</i> form <i>mutatus</i> Dyar	---; May; 62	Hearle	1927
<i>infirmitus</i> Dyar & Knab	Temporary woodland or open grassy pools; attack readily by day in and near woods, at night in and near houses, in light traps, naturally infected with western equine encephalitis, abundant; 323°	King et al.	1960
	Temporary rain pools; seldom enters houses; 323	Quinby	1941
	Mud holes under palmettos; woods; 323°	Beyer	1923
	---; March-Dec.; 323	Carpenter & Chamberlain	1946

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes</i>			
<i>innotatus</i> Dyar & Knab	---; ---; 126	Dyar & Knab	1917
<i>intrudens</i> Dyar	Temporary snow melt pools in open areas of black spruce muckeg; ---; 5° ---; ---; 5. Common in the spruce forest; bite day and night; 62° Temporary water, snow pool; in houses and cans; 62	Gjuljin et al.	1961
	Shallow leafy woodland pools; ---; 62	Rempel	1953
	Irrigated areas; ---; 62	Dyar	1920
	Ditches; ---; 62°	Twinne	1926 a
	---; May-Aug.; 62 (Bogs and marshes, persistent biters)	Snemanchuk	1959
	---; deep wooded valley with a small stream; 62	McInteek	1944
	---; wooded areas; 62	Stewart & McWade	1961
	---; ---; 62, 323 (In cold snow-pools and wet meadows, enter houses until July)	Brown	1951
	' in the ground in depressions in wooded regions, snow water pools floored with dead leaves and vegetation, in the spring and early summer; forest areas, bite by day or night; 323°	Rempel	1950
	Ground pools formed by melted snow; enters houses freely; 323	Rees	1943
	Pools among aspens and on mat, beach pools; April-Aug.; 323	Lowry	1949
	Grassy pool fed by snow-water; abundant; 323	Irwin	1943
	Woodland pools shaded by deciduous trees, open bogs, marshy localities, forest pools in dense shade of coniferous; ---; 323	Dyar	1924
	---; Mar., bites mostly in May-July; 323°	Owen	1937
	---; rare in some areas; 323	Knutson	1943
	Shallow woodland pools; ---; 323	Stage et al.	1952
		Manson	1944

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i>			
<i>iridipennis</i> Dyar	---; Aug.; 323	Dyar	1922
<i>jamaicensis</i> (Theobald)	Open lot pools and woodland pools; July-August; 323	Headlee	1945
<i>klotzi</i> Matheson	Edge of small, cold, clear mountain stream; in tall grass in meadow, at 8300 feet altitude, July; 323	Matheson	1933
<i>labradoriensis</i> Dyar & Shannon	---; ---; 62	Dyar	1928
<i>lateralis</i> (Meigen)	Flood water in wooded river valley bottom; ---; 62	Twinn	1949
	---; ---; 62, 323 (Shaded floodwater areas covered with debris and growth of cottonwoods or willows, invade houses, bite by day and toward dusk)	Matheson	1944
	Shallow waters containing vegetation, debris, sunlit pools, shaded or partly shaded areas; May-July; 323	Irwin	1943
	Overflow pools in wooded river bottoms; serious pest; 323°	Freeborn & Bohart	1943
<i>lazarensis</i> Feit & Young	---; June, July; 5	Dyar	1920
	Flood pool in cottonwood bottom land; very rare; 62	Hearle	1926
	---; May-Aug.; 62 (Early ground pools in forest, flood pools, bites shortly after dark)	Dyar	1921
	Early ground pools in forest; active after sun- set, April-July; 323°	Dyar	1922
<i>leucostipes</i> Dyar	---; ---; 5 (Muskeg pools)	Dyar	1928
	Muskeg pools; June-July; 62	Dyar	1920
	---; May; 62	Hearle	1927
	---; coast; 323	Seguy	1924
<i>masanae</i> Dyar	Small pools along little streams, most numerous about the snow line; May, July; 323	Dyar	1922

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i>			
<i>mathesonii</i> Middlekauff	---; light traps, Aug.; 323	Carpenter et al.	1945
<i>melanimor</i> Dyar	Irrigated areas; ---; 62	Shemanchuk	1959
	Sloughs, roadside ditches, p't holes, irrigated fields; April-Feb.; 323°	Chapman	1960
	Temporary rain pools; ---; 323	Dyar	1928
<i>mercurator</i> Dyar	---; July; 62	Dyar	1920
<i>mimesis</i> Dyar	---; ---; 62. ---; July; 323 (Marsh pools in the spring)	Dyar	1922
<i>mississippi</i> Dyar	Tree stump; ---; 323	Dyar	1922
<i>mitchellae</i> (Dyar)	Open temporary pools, shallow depressions; light traps, severe biter, naturally infected with eastern equine encephalitis, rare; 323°	King et al.	1960
	Fresh water along coastal plain; ---; 323	Darsie et al.	1951
	Early spring pools of rainwater; ---; 323	Dyar	1928
	---; all year; 323	Carpenter & Chamberlain	1946
<i>monticola</i> Belkin & McDonald	---; ---; 323	Stone	1965
<i>muelleri</i> Dyar	---; in mountains at 6,100 feet; 323	Dyar	1928
<i>mutatus</i> Dyar	Kock pools filled by river freshets; persistent biter, all night, mostly at dusk, June-Aug., fairly rare; 62°	Hearle	1926
	River pools; ---; 323	Dyar	1922
<i>nearcticus</i> Dyar	Early summer ground pools; ---; 5	Dyar	1922
	---; May-Aug., surfaces of tundra pool; 5	Weber	1950
	Pools at 500-1000 feet elevation, clear water in small bogs and snow-melt pools above timberline in alpine meadows, unshaded pools of sedges, sphagnum and other mosses, rockpools; open rocky tundra areas and alpine meadows, it is the worst pest in the mountains, bite readily all day even in full sunlight and produce an immediate inflammatory reaction, June and July, abundant; 62°	Jenkins & Knight	1950

TABLE 1 - MOSQUITOES (continued)

SPECIES	HABITATS: ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>nearcticus</i> Dyar (cont.)	Small shallow pools; ---; 62 ---; ---; 62 (Ground pools of arctic regions) High altitudes in the mountain in clear pools of melting snow water, ---; 323° ---; rare in some areas; 323	Rempel Dyar Mail Stage et al.	1953 1921 1934 1952
<i>nigripes</i> (Zetterstedt)	Carex marshes; ---; 5 ---; low tundra in cold, high wind, active May-Aug.; 5 ---; abundant; 5°	Knight Weber Hopla	1951 1950 1965
	At 1000 feet elevation in unshaded waters, rock pools with vegetation, alpine snow melt pools and tundra bog pools, bottoms and sides with organic debris, dead sedge or grass and sphagnum and other mosses; rocky tundra and alpine meadows, in forest, bite all day, at temperatures of 48°-65° F., in sunshine and in high winds, June and July, abundant; 62°	Jenkins & Knight	1950
	Shallow, grassy snow pools among marshes and dwarf willow and birch; invade camp buildings, peak Aug.; 62	Twinn et al.	1948
	Reservoir with melting snow; ---; 126 ---; June-Aug.; 126°	Monchadskii Natvig	1936 + 1948
<i>nigromaculis</i> (Ludlow)	---; ---; 5 Shallow pasture depressions and weedy irrigation ditches; possible vector western equine encephalomyelitis, July-Sept.; 62° Irrigated areas; ---; 62	Stone Rempel Shemanchuk	1965 1953 1959
	---, ---; 62 (Alkaline waters in rain-filled depressions, bites during daylight hours, but more active in the evening)	Carpenter et al.	1946
	---; ---; 62 (Early ground pools)	Dyar	1921
	---; ---; 62 (Rain pools)	Dyar	1928
	Temporary overflow from irrigation ditch, muddy roadside pool, pool near habitation, edge of slough, alfalfa field; at light near habitation, bites day and night; 323°	Parker	1916

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES nigromaculatus</i> (Ludlow) (cont.)	Open irrigated or flooded meadows in prairie or open country; experimental vector of equine encephalomyelitis, St. Louis and Japanese B encephalitis, abundant; 323	Stage et al.	1952
	Temporary pools of fresh water; attracted to light traps, common, Apr.-Oct.; 323	Rozeboom	1942
	Temporary rain pools, pasture pot holes and flooded areas, intermittent stream bed pools and marshes; ---; 323	Rowe	1942
	Open sunlit pools of waste and intermittent water; ---; 323	Freedman & Bohart	1951
	Puddles, prefers alkaline waters; ---; 323	Matneson	1944
	Foul, stagnant barnyard pool; ---; 323	Owen	1937
	Saline pool ; ---; 323	Ross	1947
	---; abundant in irrigated farming regions; 323°	Harmston	19-9
<i>A. siphadopsis</i> Dyar & Knab	Depressions filled with water in the spring, surface pools filled by melting snow, small shallow scattered pools; vicious biter, readily bites man, feed any time during the day but are more active towards evening; 323°	Rees	1943
	Edge of drainage ditch in open country, shallow alkaline pools in valley; March, abundant in some areas; 323°	Stage et al.	1952
	Along foothills; April-June; 323	Rees	1934
<i>nivitarsis</i> Coquillett	Rocky, mountain pool; May; 323	Headlee	1945
<i>pacificensis</i> Hearle	---; April; 62	Hearle	1927
<i>paganorum</i> Dyar & Knab	---; May; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man)	Winn & Beaulieu	1915
<i>pallidohirtus</i> Grossbeck	Woodland pool in mountain; May; 323	Headlee	19-5
<i>calustris</i> Dyar	---; June; ---; May-July; 323 (Early marsh pools, in forest until late summer)	Dyar	1921
<i>pearyi</i> Dyar & Shannon	---; ---; 62	Dyar	1928

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes pionips</i> Dyar	Temporary or semi-permanent pools in sphagnum-heath bogs, roadside ditches, tractor tracks, small shallow bodies of water in recently disturbed ground; ---; 5  ---; abundant; 5°  ---; June; 5. ---; May, July, Aug.; 62  ---; ---; 5, 323 (Early spring pools in spruce forest, active after sunset)  Cool and clear water in small depressions at the bases of spruce trees; tree branches, rarely bites; 62°  Shaded rockpools with sedge, grass, moss and organic debris, at edge of conifer forest; June; 62  ---; deep wooded valley with a large stream and unusually dense balsam fir and black spruce; 62  ---; forest; 62  ---; ---; 62, 323 (Large spring pools)  Permanent pools in dense timber; forested mountains; 323  Small pools in meadow at 7000 feet elevation; rare; 323  Shaded shallow pool; June; 323	Gjullin et al.  Hopla  Dyar  Dyar  Rempel  Jenkins & Knight  Brown  Twinn  Dyar  Mail  Stage et al.  Dyar  Dyar	1901  1965  1920  1922  1953  1950  1951  1949  1928  1934  1952  1929  1922  1945  1920  1921  1922  1952
<i>pontoricensis</i> L. Dlouy	Saltire pools; Mar., June-Aug., Dec.; 323	Dyar	1922
<i>pretans</i> Grossbeck	Meadow; April-May, July, Sept.; 323	Headlee	1945
<i>prodotae</i> Dyar	---; July; 5  ---; ---; 5. ---; June, Aug.; 62 (Early spring pools, bite both by day and night, males swarm high over spaces between bushes or small trees in open country)	Dyar	1920  1921
<i>prolixus</i> Dyar	Early spring pools; June, July; 5	Dyar	1922
<i>pseudosianaeus</i> Smith	---; ---; 5, 62. Sphagnum bog swamp; ---; 323	Smith	1952

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES pullatus</i> (Coqui'lett)	Small clear snow melt pools in <i>Carex</i> meadows; ---; 5°	Gjullin et al.	1961
	---; ---; 5, 323. ---; ---; 62 (Muddy pools along streams and lakes, males swarm after sunset in opening of the forest or over willows)	Dyar	1921
	From sea level to 1000 feet elevation, unshaded bare granite or gneiss rock pools, pools with sedge, sphagnum or other mosses and humus on sides and bottoms, clear water; ---; 62°	Jenkins & Knight	1950
	Temporary water, pools; May-July, swarm after sunset; 62	Dyar	1920
	---; ---; 62 (Artificial containers, small pools or marshy spots near dwellings)	Winn & Beaulieu	1915
	Ground depressions in the forest and meadows of higher mountain regions, pools filled with water from melting snow or from overflow of mountain streams; bite fiercely at any time during the day; 323°	Rees	1943
	Grassy pools near timber; abundant in mountainous areas and heavily wooded areas, May-Aug.; 323	Harmston	1949
	Shallow waters containing vegetation debris; rare; 323	Irwin	1943
	At 7,200-10,000 feet elevation in open and shaded meadow pools adjacent to streams; ---; 323	Chapman	1966
	Small pools found in tracks in marshy ground; ---; 323	Parker	1916
<i>punctatus</i> Dyar	Forest and meadows at 7000 feet elevation; ---; 323	Matheson	1944
	---; bite all day in shade, common in some areas; 323	Stage et al.	1952
	Early snow pools; June-Aug.; 5	Dyar	1922
	Brackish coastal marshes; ---; 5°	Frohne	1956
	<i>Carex</i> marshes; ---; 5	Knight	1951
	---; ---; 62, 323 (Pools filled with snow water)	Dyar	1928

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES furcator</i> (Kirby)	shallow semi-permanent pools in <i>Sphagnum</i> -heath bogs and <i>Carex</i> or <i>Calamagrostis</i> marshes; ---; 5	Gjullin et al.	1961
	Area covered with brushy shrub, moss and grass area; ---; 5	Gjullin & Cross	1951
	Temporary snow pools; ---; 5	Tulloch	1934
	---; May-Aug.; 5	Weber	1950
	---; abundant; 5°	Hopla	1965
	---; ---; 5, 323 (Common in forested areas). Forest; in houses, fierce biter, attack in the evening and by night, in shade by day; 62°	Rempel	1953
	In black and white spruce forests, bog and rock pool with vegetation, sphagnum bog pools, sedge marsh pool with iron flocculate with an oil slick, grass pool with decaying wood and vegetation, shaded and unshaded with stained or turbid water; rare; 62	Jenkins & Knight	1950
	Snow pools at 3000 feet altitude, shallow woodland pools; in deep woods, bite all day, fairly common; 62	Hearle	1926
	Pools and marshy areas with vegetation, on treeless tundra meadow, in swampy woods; active after sunset; 62	Twinn et al.	1948
	---; deep wooded valley with a large stream and unusually dense balsam fir and black spruce; 62	Brown	1951
	---; persistent biters, most common and annoying; 62° (Woodland and forest species, any body of standing water, large or small and roadside ditches, marshes, early species and can withstand repeated freezing and thawing)	Steward & McWade	1961
	---; May-Sept.; 62	Gyar	1920
	Pools in the timber and mountain meadows, especially pools with mossy bottoms usually filled with water from melting snow and the more permanent pools are slightly acidic; timbered regions, persistent biters, 323°	Rees	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES punctator</i> (Kirby) (ccnt.)	Shaded swamp pools; in wooded regions day and night, in and around buildings during early morning and evening, April-Aug.; 323	Irwin	1943
	In early spring usually in pools containing decaying organic matter; bite during the day or at dusk; 323	Rees	1934
	Cold, shaded pools of the coniferous forest, woodland pools in deciduous forest, open bogs; ---; 323	Owen	1937
	Early pools, especially mossy woodland pools and bog pools; ---; 323	Lowry	1929
	Mountain areas up to 13,000 feet elevation; ---; 323	Matheson	1944
	Early spring snow-water pools; ---; 323	Dickinson	1944
	Wooded swamps; ---; 323	Stearns et al.	1933
<i>purpureipes</i> Aitken	---; ---; 323	Stone	1965
<i>quaylei</i> Dyar & Knab	---; ---; 62°. Tidewater pools; ---; 323°	Dyar	1907
<i>rempeli</i> Vockeroth	---; ---; 62	Stone	1965
<i>riparius</i> Dyar & Knab	---; ---; 5	Stone	1965
	Small weedy ditches and depressions in the neighborhood of clumps of aspen poplar, in transition zone between forest and prairie; May; 62	Rempel	1953
	Irrigated areas; ---; 62	Shemanchuk	1959
	Ditches; ---; 62	McLintock	1944
	---; prairie; 62	Twinn	1949
	---; June; 62	Dyar	1921
	---; ---; 62. ---; ---; 323 (Prairies in grassland pools, ditches and depressions near poplar and willow clumps)	Steward & McWade	1961

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES riparius</i> Dyar & Knab (cont.)	---; ---; 62 (Spring pools on the prairie)  Temporary spring pool, pasture, pot holes, spring run-off water in an intermittent marsh; April; 323  Early spring snow-water pools in open; May-July, Sept.-Nov.; 323	Matheson Rowe Dickinson	1944 1942 1944
	Spring pools in the prairie region; ---; 323 ---; rare; 323	Owen Irwin	1937 1943
<i>sapphirinus</i> Osten-Sacken	---; ---; 62 (Rare)	Dvar	1921
<i>cayi</i> Dyar & Knab	Shaded woodland pools, meadows and lakes; ferocious biters, July-Sept.; 323°	Headlee	1945
<i>scutellaris</i> (Roncani)	Rainwater pools; susceptible to experimental infection with yellow fever virus, rare; 323 ---; ---; 323°	King et al. McGregor & Eads	1900 1943
<i>schizophorus</i> Dyar	Snow-water, in foothills, open meadow pools, marshy lake margins at 5000-8,700 feet; Feb., April-June; 323°  Small depressions, around edge of permanent pools in open meadow, foul water with high alkalinity; ---; 323	Chapman Mail	1966 1934
	Overflow from a permanent pool, cattle tracks, scummy seepage, water in the open; ---; 323	Dyar	1929
<i>serratus</i> (Theobald)	Low swampy woodland and mountain pools, meadows, mountains; June-Sept.; 323	Headlee	1945
<i>sierrensis</i> (Ludlow)	---; ---; 62, 323  Tree holes in quaking aspen and black cottonwood at 6,700-7,500 feet; bite at 6,700 feet, April-Sept. and Nov.; 323°	Stone Chapman	1965 1966
<i>signifera</i> (Coquillett)	Tree holes, occasionally barrels or tubs; Aug., Nov.; 323	Headlee	1945
<i>smithii</i> Coquillett	Pitcher plants in cold bog, orchids; May; 323	Felt	1904

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES sollicitans</i> (Walker)	Salt marsh; ---; 62	Twinn	1949
	Pools in salt marsh along coast, pools filled by extra high tides or heavy rains, salt water pools; thick pine woods, open beaches at dusk, severe biters both day and night, enter houses freely; 323°	Lowry	1929
	Pot holes and depressions; bite fiercely in grass and shrubbery by day, may fly 40-50 miles, experimental vector of eastern and western equine encephalitis; 323	King et al.	1960
	Salt marshes along ocean coasts, salt water pumped from oil well, brackish swamp; bite in full sunlight, more prevalent in spring and autumn; 323	King et al.	1939
	Salt or brackish pools on tidal marshes; bite especially late afternoon; 323	Komp	1923
	Salt water from mine or oil well drainage, waters with a salinity three times the average of ocean water; ---; 323	Ross	1947
	Brackish swamps, oil fields; ---; 323	Matheson	1944
	Surface water, pot hole, ditch, marsh; ---, 323	Bick	1946
	Salt and brackish mud water; ---; 323	Beyer	1923
	Soil of salt marsh after heavy rain; ---; 323	Stearns et al.	1933
	Saline pools; ---; 323	Fellton et al.	1950
	Relatively fresh-water pool; ---; 323	Carpenter & Middlekauff	1944
	Salt wells; ---; 323°	Wilson et al.	1946
	---; coastal and bay areas; 323	Dorer et al.	1944
	---; light traps; 323	Edman & Downe	1964
	---; all year; 323	Carpenter & Chamberlain	1946

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>spencerii</i> (Theobald)	Shallow grassy depressions and overgrown roadside ditches; common in April, Sept.; 62	Rempel	1953
	Irrigated areas; bite all day; 62°	Shemanchuk	1959
	Temporary snow and rain pools; prairie; 62	Twinn	1949
	Shallow, weedy ditches and grassy sloughs; ---, 62. Plains and mountains; ---; 323	Matheson	1944
	Open pools; ---; 62	McLintock	1944
	Water on edge of alfalfa field, temporary pool caused by rains, irrigation water in clover field; bites both day and night, July; 323°	Parker	1916
	Early in the spring in surface pools filled by melting snow or spring rains, frequently alkaline; plains, prairie regions, foothills, April; 323	Rees	1943
	Roadside ditches, hollows by river banks; May-Aug.; 323	Mail	1934
	Shallow waters containing vegetation debris; rare; 323	Irwin	1943
	Marshes; in light trap; 323	Ross	1947
	Shallow canyon with grassy spots surrounded by willows; ---; 323	Dyar	1929
	---; July-Sept.; 323	Dickinson	1944
<i>spencerii</i> <i>idahoensis</i> (Theobald)	---; ---; 62, 323	Stone	1965
	Foothills, open roadside ditches and meadow pools near river; May-Aug.; 323°	Chapman	1966
<i>spencerii</i> <i>spencerii</i> (Theobald)	---; ---; 62, 323	Stone	1965
<i>suzanicus</i> (Coquillett)	Pools and narrow channels filled by the higher monthly tides; common in bushes in ravines near shore; 323	Dyar	1922
	Brackish water; bites during day and before dusk; 323°	Matheson	1944
	Salt water, along wooded stream beds; ---; 323	Freeborn & Bohart	1951
	Salt marsh drainage ditches; ---; 323	Herms	1934

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes sticticus</i> (Meigen)	Common in flooded wooded valleys; May-June; 62°	Rempel	1953
	Floodwater in wooded river valley bottoms; ---; 62	Twinn	1949
	Irrigated areas; ---; 62	Shemanchuk	1959
	---; ---; 62, 323 (Woods and open country, flood pools along streams and rivers, persistent biters in day and evening, May-Sept.)	Steward & McWade	1961
	Open or woodland pools on the flood plains of streams where vernal flooding occurs, low mountain valleys along margins of larger streams; vicious biter, in woods or in the open during the day, more active in the evening; 323°	Rees	1943
	Brushy bottom lands along river, spring floods; capable of transmitting western equine and St. Louis encephalitis virus; 323	Stage et al.	1952
	Early spring pools; under bush; 323	Rozeboom	1942
	Floodwaters, temporary grassy pools in field and thickets, rain pools; rare; 323	King et al.	1960
	Along flood plains of larger rivers in flood pools, shaded pools; common; 323	Ross	1947
	Temporary spring pools in thick woods; ---; 323	Rowe	1942
	Shaded permanent swamp pool; ---; 323	Irwin	1943
	---; all year; 323	Quinby	1941
	Temporary snow pools; June-Aug.; 5	Tulloch	1934
	Semi-permanent pools overgrown with <i>Equisetum fluviatile</i> or <i>Potentilla palustris</i> ; ---; 5	Gjullin et al.	1961
<i>Aedes stimulans</i> (Walker)	---; ---; 5. ---; persistent and most annoying biter near towns and villages; 62° (Snow water and rain pools of every kind, April-June)	Steward & McWade	1961
	---; ---; 5, 62, 323 (Rain-filled woodland pools along rivers, vicious biters and often annoying in woodlands)	Carpenter et al.	1946
	---; ---; 5°	Hopla	1965
	Temporary waters in and near city; persistent biter by day and at dusk, April-July; 62	Twinn	1926
	Pools overflowed by early high water, along streams, early marsh pools; ---; 62	Dyar	1920

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES stimulans</i> (Walker) (cont.)	---; deep wooded area with a small stream; 62 ---; in woods; 62° ---; Aug.; 62 ---; ---; 62, 323 (Woodland and river flood pools, swamps, marshes, rarely enter houses, invades the urban communities. villages and parks, vicious biter and occurs in enormous number rendering life almost unendurable, April-Sept.) Pools formed by the overflow of streams, surface pools filled from snow water and early spring rains; wooded regions of the mountains at lower elevations, readily bites man any time during the day; 323° Shaded woodland pools, temporary rain pools exposed to sunlight, forest pools, semi-permanent pools; bites readily in the woods at all hours; 323	Brown Downe et al. Winn & Beaulieu Matheson Rees Owen	1951 1963 1932 1944 1943 1937
	Beach and mat pools; in wooded areas day and night, in and above houses early morning and evening, abundant; 323	Irwin	1943
	Swamp waters; Sept.; 323	Dickinson	1944
	Temporary waters of spring pools and pond overflows, intermittent stream bed pool; ---; 323	Rowe	1942
	Flood pools of river bottoms, rain filled pools in the woods; ---; 323	Mail	1934
	Open ground pools; ---; 323	Lowry	1929
	Stump holes; ---; 323	Ross	1947
	---; pest in some areas, rare; 323	King et al.	1960
	---; March-Aug.; 323	Telton et al.	1950
<i>subcaeruleus</i> Felt	---; June; 62 (Artificial containers, small pools or marshy spots near dwellings, bites man) Fresh water; ---; 323	Winn & Beaulieu Headlee	1915 1945
<i>syriacus</i> (Theobald)	River flooded open flats and meadows; ---; 62° ---; June, July; 62 (Artificial containers, small pools or marshy spots near dwellings)	Hearle Winn & Beaulieu	1921 a 1915

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Aedes</i> <i>sylvestris</i> (Theobald) (cont.)	Temporary pool near habitation, pool formed by overflow of irrigation water, small permanent pools, waste irrigation water, pool in edge of alfalfa field, temporary rain pools and roadside pool; bites day and night, May-Aug.; 323°	Parker	1916
	Clear woodland pools, open swamp areas; ---; 323	Headlee	1945
<i>sylvicola</i> Grossbeck	Pools in dense woodlands; May, July; 323	Headlee	1945
<i>taeniorhynchus</i> (Wiedemann)	Salt marshes; ---; 62	Hearle	1926
	Coastal marshes with mangrove and pickleweed, pot holes and temporary pools in <i>Batis</i> and <i>Distichlis</i> , fresh water pools; very annoying and fierce biter in shade in mangrove and other forests, in shrubbery about dwellings, in light traps, experimental vector of several strains of encephalitis; 323°	King et al.	1960
	Salt or brackish pools on tidal marshes; bites by day especially late afternoon; 323	Komp	1923
	Salt marshes flooded by rains or tides; common; 323°	King et al.	1939
	Saline pools in oil fields, occasionally in fresh water; ---; 323	Matheson	1944
	Fresh water pool thirty miles from coastal marshes; ---; 323	Carpenter & Middlekauff	1944
	Surface water, ditch; ---; 323	Bick	1946
	---; abundant and annoying pest, near seashore; 323	Reyer	1923
	---; all year; 323	Carpenter & Chamberlain	1946
<i>tahoensis</i> Dyar	Large open pools; May-June; 323	Dyar	1922
<i>thelcticus</i> Dyar	Temporary rain pools in limestone strata depressions, densely shaded pool with much <i>Sesuvium</i> ; in light traps, Oct. and Nov., rare; 323°	King et al.	1960
	Temporary pools, overflow irrigation water; spring and autumn; 323	Matheson	1944

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES thibaulti</i> Dyar & Knab	Holes at the bases of trees and stumps; hollow stumps and trees near breeding places, March-July; 323°	Shields	1938
	Tree and stump holes in swamps; bite fiercely in woodlands at midday, common; 323°	Matheson	1944
	Tree holes preferably of sweet gum and tupelo gum trees; ---; 323	Ross	1947
	---; rest in hollow trees and stumps, rarely about dwellings, daytime biter, rare; 323	King et al.	1960
	---; Dec.-May; 323	Carpenter et al.	1946
<i>tomentor</i> Dyar & Knab	Transient woodland pools; bite late afternoon to dusk in forested areas; 323°	Breeland et al.	1961
	Temporary rain-filled pools during summer months; ---; 323	Carpenter et al.	1946
	---; light traps, Sept.-Oct.; 323	Dow et al.	1964
	---; Mar.-Aug.; 323	Wirth	1947
	---; rare; 323	King et al.	1939
<i>torvus</i> (Theobald)	Temporary rain pool; ---; 323	Thurman et al.	1951
	---; in light trap, Aug., rare; 323	King et al.	1960
<i>trichurus</i> (Dyar)	Small weedy sloughs; ---; 62	Rempel	1953
	---; deep wooded valley with a small stream; 62	Brown	1951
	---; wooded area; 62	Twinn	1949
	---; April-July; 62. ---; ---; 323 (Woodland pools and swamps)	Ste.ard & McWade	1961
	---; in woods; 62°	Downe et al.	1963
	---; ---; 62, 323 (Spring pools, wooded and marshy areas, bites freer; in wooded regions)	Matheson	1944
	---; ---; 62, 323 (Early spring pools, edges of grassy marshes)	Dyar	1928
	---; ---; 62 (Ground pools, ditches)	Dyar	1921
	Pools at edges of grassy swamps, ditches along roads, wood pools; common; 323	Lowry	1929
	more acidic pools of bog mat; wooded regions, enter houses; 323	Irwin	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES</i> <i>t. shurus</i> (Dyar) (cont.)	Melting snow pools at high altitudes: rare in some areas; 323	Stage et al.	1952
	Marshes; bite day and night; 323°	Dyar	1929
	Partially shaded pools in swamp, open bog; ---; 323	Owen	1937
	Early spring snow-water pools; ---; 323	Dickinson	1944
	Ground pools; ---; 323	Dyar	1922
	---; March-Aug.; 323	Bickle	1952
<i>triseratus</i> (Say)	Tree holes, artificial containers; June and Sept., rare; 62	Twinn	1926a
	Pitcher plants; ---; 62	Kempel	1950
	---; ---; 62, 323 (Common in woodlands and around homes, bites man both day and early evening)	Carpenter et al.	1946
	---; ---; 62, 323 (Attracted to lights, July)	Steward & McWade	1961
	Tree holes in woodlands and in <i>Bursera simaruba</i> , pitcher plants, artificial containers; in light traps, fierce daytime biter in or near woods and about houses, potential and capable vector of yellow fever, western and eastern equine encephalitis, abundant; 323°	King et al.	1960
	Swamps; enter houses, experimental transmission of equine encephalomyelitis; 323	Knutson	1943
	Fresh water, semi-permanent water, roadside pool; ---; 323	Darsie et al.	1951
	Pot holes; ---; 323	Olson & Keegan	1944
	---; experimentally infected with <i>Wuchereria bancrofti</i> ; 323	Eyles & Most	1947
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	---; all year; 323	Carpenter & Chamberlain	1946
	---; common; 323	King et al.	1939
	---; rare; 323	Beyer	1923
	---; ---; 351 (Tree holes, pitcher plants and artificial containers, bite is painful)	Kempel	1953

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES trivittatus</i> (Coquillett)	---; ---; 62, 323 (Woodland pools and swamps, semi-open or lightly wooded areas, rarely in forests, persistent biter day and night)	Steward & McWade	1961
	Temporary flooded areas, rain pools and stream bed pools, intermittent marshes, margins of permanent ponds; important pest during summer and fall; 323	Rowe	1961
	Temporary pools, shady woodland pools resulting from spring rains and floods; May-Oct.; 323	Ross	1947
	Temporary pools in open and shallow ditches covered with vegetation; rare; 323	King et al.	1960
	Flood pools of rivers, rain-filled ground pools; ---; 323	Lowry	1929
	Flood pools of river, forest pools; ---; 323	Dyar	1928
	In woods, temporary creek; ---; 323	Lickirson	1944
	Swampy area; ---; 323	Knutson	1943
	Exposed pools; ---; 323	Headlee	1945
	Tree holes; ---; 323	Stearns et al.	1933
	---; early spring, readily bites during the day when their resting places in wooded areas are invaded, persistent bite is the most painful, light traps; 323*	Cate & Gates	1944
	---; bites both in shade and open; 323	Owen	1937
	---; ---; 323 (Associated with floodwater)	Matheson	1944
<i>varipesipue</i> (Coquillett)	Rain-filled tree holes, artificial containers; May-Aug., fairly common; 62°	Hearie	1926
	---; forests; 62	Dyar	1920
	---; ---; 62, 323 (Bite day and night)	Dyar	1928
	---; ---; 62 (Enter houses)	Matheson	1944
	Tree holes, rock holes and wooden receptacles under trees, may be found in mid-winter; experimental vector of western equine encephalomyelitis, vicious biter, abundant; 323*	Stage et al.	1952
	Rain barrels containing decaying leaves; occasionally enters houses; 323	Freeborn & Bonart	1951

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES ventrovittis</i> Dyar	Pools in mountain meadows at high elevations; rare; 323	Stage et al.	1952
	Pools with frozen edges and surrounded by snow banks; ---; 323	Freeborn & Schart	1951
	Early spring pools; ---; 323	Matheson	1944
	---; bites by day in mountain meadows and woods, June-Aug.; 323°	Dyar	1922
<i>vexans</i> (Meigen)	Flood pools in meadows and open places, temporary swamps, roadside ditches, flooded sumac prairies, cottonwood swamps; attracted to lights, very abundant; 62	Hearle	1926
	Shallow pasture depressions of the open prairie, semi-permanent marshy areas; possible vector of western equine encephalomyelitis; 62	Rempel	1953
	Irrigated areas, temporary pools with alkaline water; rest in shelter belts and tall vegetation, May-Sept.; 62	Shemanchuk	1959
	Woods, open pools, ruts; grass, houses; 62	McLintock	1944
	Flooded meadows and open places; ---; 62	Twinn	1949
	---; common, 62. Foul roadside pools, hog wallows, river banks, low-lying depressions; serious pest in towns and cities; 323 (Rain pools in meadows and open marshes, foul road- side puddles, abundant in filthy pools around city dumps, hog wallows, occasionally in clear woodland pools, permanent swamp pools)	Matheson	1944
	---; persistent biter; 62°. ---; ---; 323 (Any small body of standing water, in woods or in the open, enter houses in the evening, attracted to light, troublesome biters)	Steward & McWade	1961
	---; ---; 62, 323 (Rain-filled depressions and flood water, experimental transmission of eastern, western equine encephalitis and St. Louis encephalitis, bites in shady places by day and after dark)	Carpenter et al.	1946
	Contaminated and fresh water, rain pools, flood water seepage and surplus water from irrigation, temporary pools in open pasture; feed in the shade during the day, especially annoying at dusk and early evening, can transmit both St. Louis encephalitis and western equine encephalomyelitis; 323	Tate & Gates	1944

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES vexans</i> (Meigen) (cont.)	Irrigated and flood water areas at sea level and mountain meadows, overflow areas and bottom lands of rivers; enter houses at dark, most important pest, naturally infected with western equine encephalomyelitis and experimentally infected with St. Louis encephalitis virus, very abundant; 323°	Stage et al.	1952
	Surface pools, streams in the mountains and plain regions along the margins of streams in the lower river valleys, in all parts where irrigation is practiced; in wooded regions during the day, attracted to light; 323	Rees	1943
	Temporary rain pools with some decaying vegetation, semi-permanent and permanent ponds, marshes, woodland pools, cold forest pools, foul and stagnant puddles, natural standing water; abundant in May; 323	Gwen	1937
	Flood plains of rivers and streams; in light traps, experimental vector of eastern equine and St. Louis encephalitis; 323	King et al.	1960
	Woodland and open swamp pools and temporary pools in pasture land; seldom enters houses, may be very troublesome; 323	Komp	1923
	Overflow pools along wooded streams, in flooded borrow pits; foothills, plains, irrigated farming regions; 323	Harmston	1949
	Permanent cranberry bogs, swamps and upland pools; experimental transmission of equine encephalomyelitis; 323	Knutson	1943
	Temporary pond situations, many types of rain-pools flooded edges of marshes; common; 323	Ross	1947
	Flood water of woodland water course, open sunny marshes rain-filled road ruts; ---; 323	Freeborn & Bohart	1951
	Temporary ground pools, semi-permanent pools, flood or seepage, open, sunlit pools, roadside ditches, flooded meadows; ---; 323	Mail	1934
	Common in fresh-water, polluted and unpolluted water, margin of salt marsh; ---; 323	Darsie et al.	1951
	Permanent swamp pools, deep shaded pool on mat; ---; 323	Irwin	1943

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AEDES vexans</i> (Meigen) (cont.)	Surface water, pot hole, ditch, marsh; ---; 323 Polluted cat-tail swamps, clean woodland pools; ---; 323 Ditch of flower bed in garden; ---; 323 Foul, stagnant pools contaminated with sewage; ---; Olson & Keegan 323 Septic tanks, ruts, furnace pits; ---; 323 Woodland pool; ---; 323 ---; possible vector of encephalitis; 323 ---; Jan.-Nov.; 323 ---; lake area; 323 ---; light traps; 327 ---; ---; 323	Bick Stearns et al. Beyer Olson & Keegan Shields Breland Edman Wirth Quinby Twings Stone	1946 1933 1923 1944 1938 1947 1964 1947 1941 1944 1965
<i>Anopheles albimanus</i> Wiedemann	Any collection of sunlit fresh or brackish water, pure or stagnant, lakes and canals covered with vegetation; invade houses at night and leave before sunrise, naturally and experimentally infected with <i>Plasmodium vivax</i> and <i>P. falciparum</i> ; 323	Carpenter et al.	1946
<i>Anopheles pseudopunctipennis</i> Dyar & Knab	In seepage water, hoofprints, wheel ruts, ground pools with algae and artificial containers with floating plants; ---; 323 ---; enter buildings at night to bite, in forested areas by day, Sept.-Jan., rare; 323*	Matheson King et al.	1944 1960
<i>Anopheles punctimacula</i> Dyar & Knab	---; possible transmitter of malaria; 323° ---; light traps, May; 323	McGregor & Eads Carpenter	1943 1949
<i>Anopheles pseudopunctipennis</i> Robineau-Desvoidy	---; ---; 323	Root	1922
<i>Anopheles pseudopunctipennis</i> Dyar & Knab	Permanent salt pools, shallow water and alluvial marshes; enter houses, bites man in bright sunlight and by night, experimentally infected with <i>Plasmodium vivax</i> ; 323°	Matheson	19--

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles atropos</i> Dyar & Knab (cont.)	Salt water of coastal marshes; in light traps, experimentally infected with malaria, rare; 323  Soft mud, salt water; coast, suspected vector of malaria; 323  Grass-grown margins of pools on the edge of salt marshes; ---; 323  Shallow, tidal waters of mangrove swamps; ---, 323  Abandoned brackish cistern; ---; 323  ---; Feb.-Dec.; 323	King et al.  Beyer  Bishop  Schard et al.  Fisk  Carpenter & Chamberlain	1960  1923  1933  1947  1939  1946
<i>aztecus</i> Hoffmann	---; ---; 323	Baker & Kitzmiller	1963
<i>barberi</i> Coquillett	Wooden tubs; rest in tree holes, nearby houses and other shelters, attracted to light, proved susceptible to infection with malaria, all year, rare; 323  Rot cavities in trees, stump holes, artificial containers near wooded area, sometimes hibernates frozen in ice; ---; 323  Tree holes, highly polluted sumps in manure pits, artificial containers contaminated with leaves, humus and other organic materials, hibernates frozen in ice of tree holes; ---; 323  ---; experimentally infected with <i>Plasmodium vivax</i> , 323  ---; readily bites man, transmits <i>Plasmodium vivax</i> ; 323 <sup>a</sup>  ---; enter houses, persistent. <sup>a</sup> r. rare. 323 <sup>b</sup>	King et al.  Gerhardt  Boyd  Carpenter et al.  Matheson  King et al.	1960  1966  1949  1946  1944  1975
<i>boydi</i> Vargas	---; ---; 323	Vargas	1939
<i>brasilianus</i> King	Brackish water near coast and waters with less salt, roadside ditches with much <i>Juncus</i> and other plants, salt-marsh pools with flotage, algae and grasses; rare; 323  Saline waters with vegetation; experimentally infected with <i>Plasmodium falciparum</i> ; 323	King et al.  Matheson	1960  1944

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles bradleyi</i> King (cont.)	Surface water, pothole, ditch, artificial container; diurnal; 323	Bick	1946
	---; April-Dec.; 323	Carpenter & Chamberlain	1946
<i>A. crucians</i> Wiedemann	Acid-water, dense cypress swamps and coastal plains, ponds, impoundments, blocked streams and meadow swales, wheel ruts, temporary pools in pine barren and other nonvegetated accumulation of water; probable malaria vector, principal carrier of malaria in some areas; 323	Boyd	1949
	Acid or alkaline waters of ponds, lakes, pools, permanent or temporary swamps with vegetation or debris, wheel ruts, temporary pools in pine barrens; in light traps, susceptible to infection with malaria, infected with eastern equine encephalitis, common; 323	King et al.	1960
	Ponds, lake margins, swamps, and pools, acid water in cypress swamps; experimentally infected with <i>Plasmodium vivax</i> and <i>P. falciparum</i> , naturally infected with malaria, bites man in sunlight and in shade; 323*	Matheson	1944
	Slightly brackish water with very dense vegetation, Stearns fresh water; bites man indoors, considered to be an important carrier of malaria; 323*	et al.	1933
	Salt marsh; domestic; 323	Headlee	1945
	Ground pools near the coast; dangerous malaria carrier; 323	Dyar	1912
	Grassy brackish swampy by springs which contain iron, sulphur, various alkalis, in shade or partly exposed to the sun, in irrigation ditches and large canals with vegetation and a constant level of water; ---; 323	Barber	1939
	Large lily ponds with dirt banks, old borrow pits bordered by vegetation, unshaded ponds containing or bordered by vegetation; ---; 323	Good	1945
	Amongst vegetation and flootage in impoundments, in grassy, semi-permanent rain pools, abundant in artificial reservoirs; ---; ?	Roseboom	1942
	Permanent pools with water hyacinth <i>Eichornia crassipes</i> ; ---; 323	Hirman	1905

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles crucians</i> Wiedemann (cont.)	Cattail marshes; ---; 323	Ross	1947
	Salt water; ---; 323	Beyer	1923
	---; experimentally infected with St. Louis encephalitis; 323	Chamberlain et al.	1964 a
	---; bites outdoors at night, in woods by day; 323	King et al.	1939
	---; seldom transmits malaria in nature; 323	Komp	1923
	---; abundant in the coastal area; 323	Daisie et al.	1951
	---; possibly transmits malaria; 323	McGregor & Eads	1933
	---; well shaded driftwood; 323	Shields	1938
	---; all year; 323	Wirth	1947
<i>crucians bradleyi</i> King	In pools of brackish water, near the coast, in fresh water; experimentally infected with <i>Plasmodium alciparum</i> ; 323	Carpenter et al.	1946
	---; Jr. A Sept.; 323	Carpenter & Chamberlain	1946
<i>crucians</i> <i>crucians</i> Wiedemann	Swamps, ponds and lakes, also in acid waters in cypress swamps; enters houses, experimentally infected with <i>Plasmodium vivax</i> and <i>P. falciparum</i> , attracted to light traps, bites by night outdoors; 323 <sup>c</sup>	Carpenter et al.	1946
	---; all year; 323	Carpenter & Chamberlain	1946
<i>crucians</i> <i>georgicus</i> King	Acid side-hill seepage puddles characteristic of cut over long leaf pine inland; ---; 323	Wirth	1947
	Seepage pools in small streams and at the bases of hills; ---; 323	Carpenter et al.	1946
	---; Jan., April-Sept., Nov.; 323	Carpenter & Chamberlain	1946
<i>strobli</i> Dyar & Knab	---; ---; 323	Root	1922
<i>scripi</i> Vargas	Pools and pools along lake shores that are permanent or dry for only a short time during late summer; active May and June; 5	Gjullin et al.	1961

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles</i> <i>earlei</i> Vargas (co it.)	---; ---; 5, 323. ---; flying in houses in Dec., June-Oct.; 62 (Woodland pools, open bogs, margins of permanent and semi-permanent pools and roadside puddles, females hibernate in buildings and houses, sometimes found as early as March)	Steward & McWale	1961
	Irrigated areas, roadside ditches, field ponds overgrown with vegetation, shaded portions of pools with rich organic matter and algae. sluggish streams with marginal vegetation growth; ---: 62	Shemanchuk	1959
	---; enter houses during winter and early spring, May; 62°	Rempel	1953
	Cold clear water in shallow margins of semi-permanent and permanent ponds overgrown with emergent vegetation, woodland pools, marshes, open bogs, margins of sluggish streams; very aggressive: 323	Gerhardt	1966
	Margins of canal with thick floating and emergent vegetation in clear very cold water of 16°C, low marshy seepage area, small semi-permanent ponds; active at dusk in cold weather, July; 323	Rozeboom	1951
	---; invade houses, bite man in the bright sunlight, feed on man at all hours during the night; 323°	Pratt	1952
	---; Aug.-Sept.; 323	Fellton et al.	1950
<i>eiseni</i> Coquillett	---; ---; 323	Root	1922
<i>fasciatus</i> Lutz	---; ---; 323	Root	1922
<i>maculipennis</i> McFadden	Sunlit pools along the courses of receding streams, common in the mats of green algae; ---; 323	Marneson	1941
	---, July-Sept.; 323	Harmston	1945
<i>freeborni</i> Aitken	---; ---; 62. Permanent and semi-permanent water surfaces exposed to sunlight with some transient shade produced by floatage, emergent vegetation or algae, warm water, slightly alkaline clean water, brackish water, desert pools, seldom in polluted water, up to 7000 feet elevation; shelter in out-buildings, homes, cellars and similar locations, bites avidly at dusk and dawn also by day, carrier of malaria, can transmit malaria in the winter in heated rooms; 323°	Boyd	1949

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles fitchii</i> Aitken (cont.)	Clean sunny water, irrigated areas, river margins, Stage creeks and irrigation ditches, ponds, sloughs and et al. roadside ditches, hibernate in root cellars, barns, cutbuildings and other sheltered locations, naturally infected with western equine encephalomyelitis, Feb., April; 323		1952
	Shallow pools of clear water containing mats of green algae or floating <i>Lemna</i> ; plains and prairie regions, low mountain valleys, abundant, most important vector of malaria, May-Oct.; 323*	Rees	1943
	Irrigated hay fields, rice fields, shaded fresh, clear, cool, seepage water; experimentally infected with <i>Plasmodium vivax</i> and naturally infected with malaria; 323	Matheson	1944
	---; possible vector of malaria; 323	Fratt	1952
<i>georgianus</i> King	Pond, shallow seepage water at head of small stream, small puddles with algae and grassy edges; rare; 323	King et al.	1960
	Shallow, small seepage depressions in boggy side hills or swales, outlets of seepage water, hoofprints, favored by pitcher plant, <i>Sarracenia purpurea</i> ; ---; 323	Boyd	1949
	Fresh water; ---; 323	King et al.	1939
	---; all year; 323	Carpenter & Chamberlain	1946
<i>grahamii</i> Theobald	---; ---; 323	Root	1922
<i>lutzii</i> Cruz	---; ---; 323	Root	1922
<i>maculipennis</i> Meigen	---; ---; 5, 62, 323 (Small, permanent sunny pools with algae, standing irrigation water, considered the principal vector of malaria)	Dyar	1928
	Cottonwood flood-swamps, shallow pools under willow Hearle growth and permanent swamps and pools; nocturnal, fairly rare; 62	Hearle	1926
	Edges of creeks and permanent sloughs; houses, barns; 62	McLintock	1944
	---; carrier of malaria; 62	Twinn	1926a
	---; March-Sept.; 62	Hearle	1927
	---; ---; 62 (Temporary water puddles)	Dyar	1922

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles maculipennis</i> Meigen (cont.)	Shallow sunlit pools of clear water with green algae mats, hoofprints, wayside pools, neglected irrigation and drainage ditches; seepage areas; overwinter in and about dwellings, up to 5,438 feet altitude, experimental vector of tertian, subtertian and quartan malaria, all year, peak Sept.; 323*	Freeborn	1926
	Grassy swamps, open pastures fed by irrigation water, irrigation ditches with vegetation and in constant level of water, in cold mineral springs; enters houses, carrier of malaria, common in summer and early autumn; 323	Barber	1939
	Permanent pools; wooded area where shaded, algae-filled pools are numerous, arid plains; 323	Mail	1934
	Semi-permanent and permanent ponds along shoreline with aquatic plants and algae, temporary rain pools, woodland pools, marshes, open bogs, shoreline of streams; ---; 323	Owen	1937
	Ponded areas bordering streams in wooded and open country, containing some marginal and aquatic floating plants; ---; 323	Rowe	1942
	Natural pools, margins of mud, lake and bog, mat pools, permanent swamp and beach pools; ---; 323	Irwin	1943
<i>maculipennis freeborni</i> Aitken	---; ---; 62*, 323*	Geigy & Herbig	1955
	Small fresh-water pools, partly exposed to sunlight with algae, hoofprints in seepage areas, bays in moving stream margins, cut-off and semi-permanent pools; enters houses, vicious indoor biter; 323°	Freeborn & Brookman	1943
<i>maculipennis occidentalis</i> Dyar & Knab	---; rare; 5	Stage & Chamberlin	1945
	Fresh water among algae mats; ---; 323*	Freeborn & Brookman	1943
<i>neivai</i> Dyar & Knab	---; ---; 34?	Root	1922
<i>occidentalis</i> Dyar & Knab	---; ---; 5, 62. Permanent and semi-permanent water surfaces exposed to sunlight with shade, produced by floatage, emergent vegetation or algae, warm water, slightly alkaline clean water, brackish water, seldom in polluted water; valleys; 323 (Efficient experimental vector of malaria)	Boyd	1949

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles occidentalis</i> Dyar & Knab (cont.)	---; ---; 5, 62, 323 (Grassy margins of lakes, in slow streams with vegetation, fierce biters, attack usually during twilight hours, overwintering females attack in bright sunlight)	Matheson	1944
	Pond filled with refuse, weed, cattails, sedges, and algae; light trap; 6?	Twinn	1944
	Shore of sluggish, overgrown stream; wooded areas; 62	Rempel	1950
	Roadside ditches, alder-swamps; common; 62	Hearie	1921 a
	---; ---; 62 (Puddles, prefers permanent waters)	Dyar	1921
	Rice fields; naturally infected with malaria, March and April; 323	Freeborn	1917
	Open grassy pools; rare; 323	Stage et al.	1952
	River bottom; along creek, in cabin; 323	Parker	1916
	Swamp waters; June-Nov.; 323	Dickinson	1944
	---; seldom bites man; 323°	Pratt	1952
<i>occidentalis freeborni</i> Aitken	---; ---; 323	Bates	1949
<i>occidentalis occidentalis</i> Dyar & Knab	---; ---; 62, 323	Bates	1949
<i>parvus</i> Chagas	---; ---; 323	Root	1922
<i>pertinax</i> Ludlow	Margins of streams from limestone springs; rare; 323	King et al.	1960
<i>plumbeus</i> Stephens	Concealed places, artificial containers, tree holes; ---; 126	Shtakelberg	1925 +
<i>pseudopunctipennis</i> Theobald	Grassy brackish swamps, large canals and irrigation ditches with vegetation and constant level of water, in cold, fresh and bitter mineral springs, exposed or partly shaded in the sun, in seepages, ponds, riverbeds and streams; possible vector of malaria, Sept.; 323	Barber	1939

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Anopheles pseudopunctipennis</i> Theobald (cont.)	Clear sunlit pools with algae, vegetated margins of slow-flowing streams; enter houses, bite readily, experimentally infected with <i>Plasmodium vivax</i> and <i>P. falciparum</i> , rare; 323°	King et al.	1960
	Wayside sunlit pools, foul waters; seldom enters habitations, experimentally infected with sub-tertian malaria; 323	Freeborn	1926
	In sandy river bed with algae; ---; 323	Rozeboom	1942
	River valley; ---; 323	King et al.	1939
	Ricefields; ---; 323	Freeborn	1917
	---; Oct.; 323	Wirth	1947
<i>pseudopunctipennis formviscosus</i> McCracken	---; ---; 62*, 323*	Geigy & Herbig	1955
	Open springs and spring-fed pools and seep areas adjacent to foothills, at 5,495 feet elevation; Oct.-March and May-Aug.; 323°	Chapman	1966
	Shallow pool at the edge of receding stream with abundant growth of algae in fullest sunlight, artificial containers, brackish water; ---; 323	Freeborn & Bohart	1951
	---; rare; 323	Stage et al.	1952
<i>pseudopunctipennis</i> <i>pseudopunctipennis</i> Theobald	Clear sunlit water, rich in algae; enter houses and bites man, naturally and experimentally infected with <i>Plasmodium vivax</i> and <i>falciparum</i> 323*°	Carpenter et al.	1946
<i>punctimacula</i> Dyar & Knab	---; ---; 323	Root	1922
<i>punctipennis</i> (Say)	Roadside ditches, surface pools contained flood swamps, permanent swamps, rain-filled vallis, open depressions in meadows; hibernates in caves, out-houses and caves, fairly rare. 62°	Hearle	1926

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ANOPHELES punctipennis</i> (Suy) (cont.)	Log pools in the backwaters of the river, among wild rice in river margins, in a sedge-grown lily pool, cattail marsh; ---; 62 Ponds; ---; 62 ---; March-Aug.; 62 ---; ---; 62. ---; at 1200 feet elevation or over, grassy areas; 323 (Rain water barrels, roadside puddles, muddy road ruts, grassy bogs, swamps, hog wallows, spring pools, stream margins, lakes and open ponds) ---, ---; 62. ---; 323 (Large pools, small rain puddles, rain barrels and artificial containers, seldom in buildings in summer, hibernates in buildings and hollow trees, bite anytime mostly in early evening) ---; - -; 62, 323 (All sort water puddles, ir permanent water, a dangerous malaria carrier, active after sunset) ---; ---; 62 (Ground pools) Flowing stream margins, wells, deep lime sinks, containers, clay borrow pits, pools without vegetation; bite mostly at night and in dense shade or on cloudy days, in barns, outhouses and in houses, more common in late fall and early spring, rare; 323° Marshes, swamps, ponds and pond holes, mill ponds, Sabrosky lake margins, pigpens, horse and cow tracks in wet ground, overflow or rain water, running waters, creek and streams, drainage ditches; experimentally infected with malaria, highly susceptible to <i>Plasmodium vivax</i> ; 323°	Twinn McLintock Hearie Matheson Steward & McWade Dyar Dyar King et al. Sabrosky Ross Carpenter et al. Lowry	1944 1944 1927 1944 1961 1922 1928 1960 1946 1947 1946 1929
	Running streams, backwaters of lakes, cattail marshes, densely wooded cypress swamps, open and almost barren pools, open salt waters and densely shaded situations; experimentally infected with malaria; 323°		
	Along the margins of streams; seldom enters houses, bites after dusk and during daylight in dense woodlands, experimentally infected with <i>Plasmodium vivax</i> , <i>P. falciparum</i> and <i>P. malariae</i> ; 323°		
	Swampy areas, ground pools of various kinds, transient rain puddles; domestic, common, bite at dusk, in houses during winter; 323°		

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Culex tarsiferinus</i> (Say) (cont.)	Pools and eddies in drying stream in sunlight with mats of green algae, shallow mountain streams; overwinter in caves, houses and other shelters; 323	Gerhardt	1966
	Pools in tangled wooded sections, cool, clear, shaded with limited exposure to sunlight; bite in open, experimental vector of tertian malaria; 323	Freeborn	1926
	Swift streams with fringe vegetation; under rock ledges, bridges, hollow trees; 323	Shields	1938
	Stream pool; suspected vector of malaria; 323	Rozetoom	1942
	Woods, open pools; peak May-Nov.; 323	Horsfall	1936
	Natural and man-made pools, lakeward edges of mat; rare; 323	Irvin	1943
	Almost all types of watered areas including temporary rain pools, pasture potholes, artificial containers and shallow sheet flood water, grass-covered borders of small pasture streams, rocky or sandy pools in the beds of larger creeks; ---; 323	Rowe	1942
	Grassy swamps, large canals and irrigation ditches with overhanging vegetation and in constant level with water, in cooler water, either shaded or fed by cold springs; ---; 323	Barber	1939
	Any standing water except in artificial receptacles, permanent and temporary water, open pools, ditches, meadows, prefer shaded woodland pools; ---; 323	Beadle	1952
	Margins of flowing streams, small clay borrow pits or pools without vegetation, seepage cut-crop; ---; 323	King et al.	1939
	Slow-moving, grass bordered streams, stagnant pools, roadside ditches and pond margins; ---; 323	Darsie et al.	1951
	Foul, stagnant pool contaminated with sewage, potholes; ---; 323	Olson & Keegan	1944
	Fresh water, salt marsh and swampy areas inland; ---; 323	Headlee	1945
	Woodland creek pools; ---; 323	Freeborn & Bohart	1951
	---; experimentally infected with <i>Wuchereria bancrofti</i> ; 323	Eyles & Most	1947

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ANOPHELES punctipennis</i> (Say) (cont.)	---; possibly transmits malaria; 323 ---; only enters empty houses; 323 ---; light traps; 323 ---; all year; 323 ---; ---; 323*	McGregor & Eads Komp Edman & Downe Fellton et al. Knutson	1943 1923 1964 1950 1943
<i>quadrimaculatus</i> Say	---; March-Sept.; 62 ---; ---; 62, 323 (Fresh water in sluggish streams, Carpenter canals, ponds and lakes with surface growths or emergent vegetation or floating debris, naturally and experimentally infected with <i>Plasmodium vivax</i> , <i>P. falciparum</i> and <i>P. malariae</i> , bites man at night, enters houses, in dark corners, in buildings, underneath houses, in hollow trees and other shelters during daylight hours) ---; ---; 62 (Lake margins, swamps, water collections of permanent nature where aquatic vegetation or surface debris is abundant, occurs more extensively in open sunlit waters, cool, clean water, bites man, most common vector of malaria) ---; ---; 62 (Large pools, canals, debris on lake surface, puddles and temporary pools, bite chiefly at dawn and dusk, rest in shade)	Hearle et al. Vargas Steward & McWade	1927 1946 1950 1961
	Ponds, midstreams along leaves of plants with current moving leaves, marshes, swamps, pond holes, mill ponds, lake margins, garden pools, pigpens, hoofprints, overflow or rain waters, river banks, creeks, drainage ditches, springs, standing and running water; naturally and experimentally infected with malaria; 323°	Sabrosky	1946
	Ricefields, ditches, pools, swamps that are more or less permanent with abundant vegetation or surface debris, prefer partly shaded water, cool and clean without debris; in light traps and houses, most common, all year, peak June-Sept.; 323	Horsfall	1942

TABLE 1 - MOSQUITOES (continued):

SPECIES	BREEDING HABITATS, ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	REFERENCE	DATE
<i>A. fitchii</i> <i>mimicula</i> Say (cont.)	Permanent fresh water, sluggish streams, canals, lakes with emergent vegetation; rest by day in dark corners, underneath houses, stables and other shelters, regarded as the most important vector of malaria in some regions; 323	Gerhardt	1966
	Small pools, backwaters, shallow basins of large lakes and marshes with emergent vegetation, Russia; diffuse, cattails, rushes and shrubs, shallow, warm and sluggish waters; crepuscular and nocturnal, most important carrier of malaria; 323	Ross	1947
	Permanent fresh-water pools, ponds and swamps with vegetation and floating debris; in woods; 323	King et al.	1960
	Miscellaneous water collection with vegetation and debris; most important vector of malaria; 323*	Mattheson	1944
	Surface water, artificial container; diurnal; 323	Bick	1946
	Woods, open pools near houses; in grass; 323	Horsfall	1936
	Brackish water of salt marsh; domestic; 323	Headlee	1945
	Fresh water, stagnant bayous or pools and ponds in which filamentous algae develop, floating masses or mats; ---; 323	Beyer	1923
	Permanent ground pools containing algae, backwaters of rivers and sometimes in brackish water of salt marsh pools; ---; 323	Lowry	1929
	Semi-permanent ponds, temporary rain pools containing algae and other aquatic vegetation; ---; 323	Owen	1937
	Mashes with warm water, aquatic vegetation or floating debris; ---; 323	Barnes et al.	1950
	Lily ponds, old borrow pits, quiet, sunlit pools with floating vegetation; ---; 323	Good	1945
	Potholes, temporary pools, streams, springs; ---; 323	Olson & Keegan	1944
<i>strigimacula</i> Dyar & Knab	---; ---; 323	Root	1922
<i>tarsimacula</i> Goeldi	---; ---; 323	Root	1922

TABLE 1 - MOSQUITOES (continued).

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ANOPHELES walkeri</i> Theobald	Swampy, cattail grown lake with muddy bottom, amongst marshes in the woodland; at light traps, bite man at noon; 62°. ---; light traps; 323 ---; abundant in <i>Typha</i> swamps; 62 ---; ---; 62. 31 (Grassy marginated pools and lakes. Matheson swamps and shallow-flooded grassy areas with emergent vegetation, under houses, barns, piggeries. Under overhanging grass and scrubbery enter houses at night, bites at twilight and in bright sunlight when disturbed, experimentally infected with malaria)	Winn Winn & Beaulieu	1944 1932 1944
	---; ---; 62, 323 (Standing water, pools, marshes with grass and rushes at margins and duckweed on surface)	Steward & McWade	1961
	---; ---; 62, 323 (Permanent and semi-permanent water with lush vegetation, marshes, river overflows)	Dyar	1928
	Fresh water marshes with luxuriant growth of emergents, ricefields, sloughs with water hyacinth; rest by day on emergent vegetation, damp barns, spring houses and under bridges, in light traps, bite day and night, naturally and experimentally infected with malaria, rare; 323°	King et al.	1960
	Standing water, marshes, swamps, ponds and pond holes, mill ponds, lake margins, overflow or rain waters, running waters, creeks and streams, ditches; experimentally infected with <i>Plasmodium vivax</i> and <i>P. falciparum</i> ; 323	Sabekky	1946
	Under overhanging marginal grasses, flood pools; possible vector of malaria, peak July-Sept.; 323	Knutson	1943
	Semi-permanent ponds, temporary rain pools, shoreline of small stream; hard wood and coniferous forest region; 323	Owen	1937
	Cattail marshes and bogs; vicious biter, May-Nov.; 323	Ross	1947
	Shallow waters containing debris of vegetation; ---; 323	Irwin	1943
	Permanent and semi-permanent fresh-water pools; ---; 323	Darsie et al.	1951
	---; known to be a good experimental vector of <i>Plasmodium vivax</i> , enter houses, may be important carrier of malaria; 323	Quinby	1941

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ANOPHELES</i> <i>walkeri</i> Theobald (cont.)	---; experimentally infected with <i>Wuchereria bancrofti</i> ; 323	Eyles & Most	1947
	---. April; 323	Wirth	1947
<i>COQUILLETTIA</i> <i>perturbans</i> (Walker)	Swampy places, attached to roots of aquatic plants; Headless fierce biter. June; 323°		1945
<i>CULEX</i> <i>abominator</i> Dyar & Knab	---; ---; 323	Stone	1965
<i>abserratus</i> Felt & Young	Cold mountain stream; June; 323	Felt	1904
<i>absobrinus</i> Felt	Cold mountain pool; July and Aug.; 323	Felt	1904
<i>anis</i> Dyar	Large permanent pool with cattails and <i>Juncus</i> , April, rare; 323	Dyar	1928
	Large pond; May; 323	Dyar	1922
	Stagnant, tule-filled stream pool. ---; 323	Freeborn & Rohart	1951
<i>annulatus</i> Schrank	---; ---; 62, 323	Felt	1904
<i>annulirostris</i> Skuse	---; experimental transmission of Japanese B encephalitis; 323	Hammon et al.	1949
<i>apicalis</i> Adams	---; ---; 5	Tulloch	1934
	Shallow surface pools protected by willow growth, open meadow swales, roadside pools and ditches, permanent swamps and cottonwood flood swamps, prefer clean water; hibernate among crevices in stones over a spring in woods, April, June-Oct., fairly common; 62	Hearle	1926
	Permanent pools and sloughs; woods; 62	McLintock	1944
	Bodies of water polluted with sewage, pond with muddy bottom in sphagnum bog; ---; 62	Twinn	1944
	Cool water shaded by grass; ---; 62	Rempel	1950
	Semi-permanent and permanent pools, in streams and in swamps; enter houses, common amongst vegetation and shelters near their breeding places, all year; 323	Carpenter et al.	1946

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS, ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Culex apicalis</i> Adams (cont.)	Mat, beach and swamp pools, margins of lake; in dark recesses of stumps and logs, abundant; 323	Irwin	1943
	Woods, open pools, streams; peak June; 323	Horsfall	1936
	Grassy pools, swampy places with vegetation; common; 323	King et al.	1939
	Marshy places, margins of semi-permanent and permanent ponds, temporary rain pools, open bogs, shaded woodland pools, cool forest pools, ---; 323	Owen	1937
	Open marshes, moderately shaded pools with clear water; ---; 323	Ross	1947
	Permanent pools with aquatic vegetation, artificial Komp containers; ---; 323	Komp	1923
	Deep, dark woodland pools, grassy pools; ---; 323	Mail	1934
	Algae filled spring branches and ponds; ---; 323	Shields	1938
	Running and pooled streams; ---; 323	Rozeboom	1942
	Marshy areas of the lake; ---; 323	Quinby	1941
	Potholes; ---, 323	Olson & Keegan	1944
	---: diurnal; 323	Bick	1946
	---; rare; 323	Stearns et al.	1933
	---; ---; 351 (Grassy pools, edges of ponds, common in swampy areas, meadows-lands and rarely about dwellings, bites man)	Matheson	1944
<i>arizonensis</i> Bohart	---; ---; 323	Stone	1965
<i>atratulus</i> Theobald	Abandoned fish pools, brackish roadside pool, man-made well in limestone; in light traps, rare; 323	King et al.	1960
	Ground pools; ---; 323	Carpenter et al.	1946
<i>atropalpus</i> Coquillett	Small rock pools beside streams, water-filled pot-holes at rivers edge; ---; 323	Felt	1904

TABLE I - MOSQUITOES (continued)

SPECIES	FREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULEX aurifer</i> Coquillett	Large bodies of water, cranberry bog; April and May; 323	Felt	1904
<i>badgeri</i> Dyar	---; ---; 323	Freeborn	1926
<i>bahamensis</i> Dyar & Knab	Underground cistern with brackish water, abandoned fish pool, brackish pothole c. pool; rare; 323	King et al.	1960
	Temporary rain pools; ---; 323	Fritchard et al.	1947
	---; in light traps; 323	Fisk	1939
<i>boharti</i> Brookman & Reeves	Foothills, areas fed by fresh-water springs, open and shaded pools and streams; May-Oct., rare; 323	Chapman	1966
	Sunlit creek pools with vegetation; lowlands; 323	Freeborn & Bohart	1951
<i>canadensis</i> Theobald	---; abundant in some areas; 62. Low swampy woodlands, woodland springs, pools or ditches carrying spring water; Jan., Feb., March and April; 323	Felt	1904
<i>cantans</i> Meigen	---; common in woods, June and July; 62. Woodland pools and springs; April-Aug.; 323	Felt	1904
<i>cantator</i> Coquillett	Salt marshes; ---; 323	Felt	1904
<i>chidesteri</i> Dyar	Pools with vegetation; ---; 323	Joyce	1948
<i>chrysocotum</i> Dyar & Knab	---; ---; 323	Dohanian	1920
<i>cinereoborealis</i> Felt & Young	Woodland pools; May; 323	Felt	1904
<i>confinis</i> Lynch Aribalzaga	---; Aug.; 62. ---; July; 323	Felt	1904
<i>corniger</i> Theobald	Temporary pools, tree holes, artificial containers; Matheson ---; 323	Matheson	1944
	---; ---; 323 (Dirty ground pools, coconut husk and bamboo joints)	Dyar	1922

<i>reevesi</i> Wirth	Tule filled stream pools; ---; 323	Freeborn & Bohart	1951
<i>restuans</i> Theobald	Dirty pools and artificial containers; rare; 62	Rempel	1953
	---; ---; 62, 323 (Woodland pools, stagnant ditches, all summer, overwinter in sheltered places)	Steward & McWade	1961
	Permanent and semi-permanent ground pools, ditches, rainbarrels, prefer somewhat foul water with decaying grass and leaves, hollow stumps and basal cavities of gum trees; least abundant in summer, common; 323*	King et al.	1960

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULEX restuans</i> Theobald (cont.)	Quiet natural pools, large and small mat pools, marginal waters of lake, drain basin of septic tank rich in organic matter; abundant; 323	Irwin	1943
	Ditches, woodland and stream pools, artificial containers; enter houses, troublesome biters, abundant in late winter and spring months; 323	Carpenter et al.	1946
	Clean water; domestic, troublesome; 323	Headlee	1945
	Hollow stumps, tree holes, septic tanks, old boats, stagnant pools, artificial containers, temporary puddles, old tires; ---; 323	Shield	1938
	Woodland pools with rotting leaves, in watering troughs along roadsides; ---; 323	Matneson	1944
	Unstocked fish ponds, semi-domestic and water holes; ---; 323	Ross	1947
	Foul water in small depressions, hoofprints: ---; 323	Freeborn & Bohart	1951
	Fresh water pond, cranberry bog; ---; 323	Bast	1963
	Springs, seepages and stream pool; ---; 323	Rozeboom	1942
	Swamp waters; ---; 323	Dickinson	1944
	Salt marsh; ---; 323	Darsie et al.	1951
	---; all year; 323	Carpenter & Chamberlain	1946
<i>salinarius</i> Cecquilletti	Small, shallow, dirty streams; at light traps, fields, bites man readily in the evening; 62°	Twinn	194-
	---; ---; 62	Twinn	1949
	Grassy pools, fresh or brackish water, in ditches, ponds and artificial containers; enter houses, bites indoors and outdoors, all year, peak April-Oct.; 323°	Carpenter et al.	1946
	Grassy pools of fresh or brackish water, bilge water of boats and barges; common along coast, enter houses, bite freely outdoors at night, common; 323	King et al.	1939

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Culex pipiens</i> Coquillett (cont.)	Ditches, marshy places, water barrels, fairly clean fresh-water sites; attracted to light traps emitting CO <sub>2</sub> abundant; 323	King et al.	1960
	Pools on salt marshes or adjacent upland; domestic, may prove troublesome; 323	Headlee	1945
	Brackish swamp; common in summer and autumn; 323	Barber	1939
	Surface water, artificial container; diurnal; 323	Bick	1946
	Swampy edges of lakes, oxbow pools, various types marshes, ponds, cattle tracks, cattail bogs, stump holes and polluted ditches; -; 323	Ross	1947
	Fresh water pools near sea a. inland, brackish waters; ---; 323	Kemp	1923
	Stream pools, springs, seepages and temporary rain pools; ---; 323	Rozelboom	1942
	Foul, stagnant pool contaminated with sewage; ---; 323	Olson & Keegan	1944
	Occasionally fresh water pond and cranberry bog; ---; 323	Bast	1963
	Permanent pools, temporary rain pools in the open; ---; 323	Dickinson	1944
	Margins of semi-permanent ponds, marshes; ---; 323	Owen	1937
	Cranberry and leatherleaf bogs, ---; 323	Knutson	1943
	Swamp, salt hole; ---; 323	Stearns et al.	1931
	Woodland pool; ---; 323	Breland	1947
	Beach pool; ---; 323	Irwin	1943
	Gutters; ---; 323	Feyer	1923
	---; enters houses and bites during the evening; 323	Matheson	1944
	---; experimentally infected with <i>Wuchereria bancrofti</i> ; 323	Eyles & Mest	1947

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULEX</i> <i>saxatilis</i> Grossbeck	Surface pools and ditches mainly protected by willow or other growth; ---; 62	Hearle	1921a
	Rock-bottomed pool in mountain; Aug.; 323	Headlee	1945
<i>serratus</i> Theobald	Fresh-water pools in low swampy woodland; July, Sept. and Oct.; 323	Felt	1904
<i>similis</i> Theobald	Permanent pools in swamps and coral rockholes with vegetation, occasionally in clear wells; Mar. and Oct.; 323	Dyar	1922
<i>sollicitans</i> Walker	On or in black mud, base of grass stems, salt marshes, brackish or salt water and fresh water, puddles and ditches; most annoying, July and Sept., abundant; 323°	Felt	1904
<i>spissipes</i> (Theobald)	---; ---; 323	Dohanian	1920
<i>squamiger</i> Coquillett	---; ---; 323	Felt	1904
<i>stigmatosoma</i> Dyar	Streambed pools, fountains and water troughs; May-July; 323	Dyar	1922
	Sewer farms, non-saline water in ground pools and artificial containers; ---; 323	Freeborn & Bohart	1951
	Grassy edges of permanent water; ---; 323	Matheson	1944
	---; naturally infected with western equine encephalomyelitis, common; 323	Stage et al.	1952
<i>sylvestris</i> Theobald	---; July; 62. Fresh-water and open swamps, dark woodland swamps, cattail areas; enter houses, June-fall, common; 323°	Felt	1904
<i>taeniorhynchus</i> Wiedemann	Woodland; ---; 323	Felt	1904
<i>tarsalis</i> Coquillett	Open surface rain pools, flooded fields, roadside ditches, sloughs, permanent swamps and ponds, cottonwood flood swamps. in foul water; in out-houses by day, bite very painful, most active at dusk, fairly common 62	Hearle	1926
	Irrigated areas, pools, seepage pools of main canals, laterals and supply ditches; bite after sunset, incriminated as vector of western equine encephalitis, May-Sept.; 62	Shemanchuk	1959

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULEX</i> <i>tarsalis</i> Coquillett (cont.)	Small temporary weedy roadside ditches; enter houses, bite at dusk and by day; 62° Barrels; ---; 62 Hoofprints by the creek; ---; 62 ---; ---; 62, 323 (Fresh or rather foul water, ground pools, roadside ditches, irrigated water, rain-water barrels, readily enter houses after dark, bite is painful and swells for hours, naturally infected and capable of transmitting St. Louis and western encephalitis)	Rempel McLintock Twinn Carpenter et al.	1953 1944 1944 1946
	Clear, fresh, alkaline or foul, stagnant water containing organic material, open sunlit places, also shade woodland pools, either small or large bodies of water, including vegetated margins of lakes or ponds, marshes, stream pools, irrigation and road ditches, gutters, drainage, cesspools and seepage pools, liquid manure, artificial containers, arid regions, including hot irrigated valleys, plains, prairies up to 9,000 feet; occasionally bite man, bite sometimes causes inflammatory reaction in human beings, attracted to light, enter dwellings readily, naturally infected with western equine encephalomyelitis, suspected vector of St. Louis encephalitis, April-Feb., peak July-Sept.; 323*	Jenkins	1950
	Artificial containers to mountain meadow pools up to 9,500 feet elevation, common adjacent to hot springs, prefer alkaline seep areas, permanent and temporary pools, irrigation drain ditches and tail-end water from irrigation; overwinter in cellars and damp, abandoned mines, night-biting; 323°	Chapman	1966
	Swampy areas, stagnant pools contaminated by refuse from slaughter yards, hoofprints in pastures, seepage, small temporary rain pools on open prairies; occasionally attack man in the open, known to be able to transmit western equine and St. Louis encephalitis viruses; 323	Tate & Gates	1944
	Roadside pool, small permanent pool, cattail pool, tracks in permanent swampy ground, deep water in cattail swamp, alkali pools near swamp, permanent swamp along railroad, rain pools in marshy ground; near habitation; 323	Parker	1916

TABLE I MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Culex tarsalis</i> Coquillett (cont.)	Waters of permanent, intermittent or permanent nature in ponds, streams, bed pools, rain pools, pasture potholes, marshes and flooded areas, slow-flowing streams; bites after dusk; 323	Rowe	1942
	Reservoir margins, cooler water in drainage ditches, pool filled with algal growth, Chira, sewage lagoon, flooded vegetation and pasture-lands, driftwood and debris accumulations in caves; potential vector of encephalitis; 323	Edman	1964
	Parnyard puddles, stream margins; naturally infected with St. Louis encephalitis, experimentally infected with Japanese B and California encephalitis, abundant; 323	Stage et al.	1952
	Ditches, seepage areas, grassy pools and ponds, unshaded swampy places, floodwaters, clay borrow pit, hoofprints, polluted pools, r2. . 323	King et al.	1960
	Permanent or semi-permanent water, water containing Mail algae, cattails and aquatic vegetation; ---; 323		1934
	Gently flowing streams, lakes, swamps, impoundments, springs; attracted to light traps; 323	Rozeboom	1942
	Foul pools about slaughter yards, corrals and similar places; bites man at dusk; 323	Matheson	1944
	Clay borrow pits; rare in the Southeast and common in the west; 323	King et al.	1939
	Hoofprints, backwaters and a drainage backwater with high pollution of sulfuric acid waste; ---; 323	Ross	1947
	Roadside overflow pools with much algae; ---; 323	Aitken	1940
	Open bogs, lakeshores; ---; 323	Owen	1937
	Hot springs; ---; 323	Dyar	1923
	Rice fields; ---; 323*	Freeborn & Bohart	1951
	---; experimental transmission of Japanese B encephalitis; 323	Hammon et al.	1949
	---; only below 7500 feet elevation; 323	Harmston	1949
	---; March; 323	Herms	1934

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULEX territans</i> Walker	Clear water in grassy permanent ponds; May; 5.	Rempel	1953
	Shallow, weedy permanent pool; ---; 62		
	Permanent or almost permanent pools, ponds, lake shores; ---; 5	GjulJin et al.	196*
	---; hibernate below snow in clumps of <i>Calamagrostis</i> grass; 5	Hopla	1965
	---; ---; 5, 323. ---; ---; 62 (Permanent and temporary pools, swamps and bogs, all summer)	Steward & McWade	1961
	Barrels, sloughs, ditches; in houses, June-Sept.; 62	McLintock	1944
	---; common; 62	Twinn	1926
	---; ---; 62, 323 (Dirty pools, artificial containers, woods, semi-domestic, troublesome)	Dyar	1928
	Dirty ground pools, stagnant ditches, artificial receptacles; semi-domestic, enters houses freely, annoying biter; 323°	Lowry	1929
	Grassy pools, ditches, open swampy places with vegetation; in light traps, common; 323	King et al.	1960
	Rainbarrels; seldom enter houses; 323	Komp	1923
	Clean water, occasionally in puddles, rarely in rain barrels; April; 323	Headlee	1945
	Dirty pools, artificial receptacles, permanent and semi-permanent shaded pools with decaying leaves; ---; 323	Mail	1934
	Marshy localities, temporary ground pools semi-permanent and permanent ponds, woodland pools; ---; 323	Owen	1937
	Abandoned quarry with growth of cattail and polluted with garbage, grass-congested roadside ditch; ---; 323	Stearns et al.	1933
	Fresh water pond, occasionally cranberry bog; ---; 323	Bast	1963
	Semi-shaded and open grassy pools; ---; 323	Stage et al.	1952
	Leather leaf bog; ---; 323	Knutson	1943
	---; May-Nov.; 323	Fellten et al.	1950
	---; light traps; 327	Twinn	1944

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULEX testaceus</i> var der Wulp	---; April, June, Oct.; 52. ---; ---; 351 (Grassy marshes, all summer) ---; May, rare; 62 Gutters and pools of rain water; ---; 323	Dyar Twinn Beyer	1921 1926 1923
<i>thriambus</i> Dyar	Shaded fresh-water springs, June and July, rare; 323 Riverbed pools; Aug.; 323 Leaf-filled rock pools along stream; ---; 323	Chapman Dyar Freeborn & Bohart	1966 1922 1951
<i>triseriatus</i> Say	Artificial containers; June and July; 323	Felt	1904
<i>trivittatus</i> Coquillett	Woodland pools; July-Sept.; 323	Felt	1904
<i>CULICELLA alaskaensis</i> (Ludlow)	---; ---; 5, 62, 323 (Stagnant pools in mountainous river valleys, high altitudes)	Dyar	1928
<i>dyari</i> (Coquillett)	---; June, July, rare; 62 Cold woodland spring pools; May, Aug.; 323 Cold spring or bog pools, rare; 323	Dyar Dickinson Lowry	1920 1944 1929
<i>Impatiens</i> (Walker)	---; abundant below Arctic Circle; 5. ---; in forests; 323 (Dark and shaded pools, large, cool, clear springs, bite after sunset) Springs and spring-fed pools in woodlands; April, May, July-Sept.; 323 Permanent forest pools; rare; 323	Dyar Dickinson Lowry	1928 1944 1929
<i>invidens</i> (Thomson)	---; ---; 5, 323 (Ground pools contaminated by vegetable matter, artificial containers, water barrels on railroad trestles, rare)	Dyar	1928
<i>inornata</i> (Williston)	---; ---; 62 (Old stagnant permanent pools, artificial containers) Permanent pools, occasionally artificial containers; Aug.-Nov.; 323 Permanent stagnant ground pools; ---; 323	Dyar Dickinson Lowry	1928 1944 1929

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULEXELLA</i> <i>maccrackenae</i> Dyar & Knab	---; ---; 323 (Old stagnant permanent pools, rare)	Dyar	1928
<i>neivara</i> (Coquillett)	Cold springs or permanent bog pools; rare, Aug., Sept.; 323	Lowry	1929
	Springs and spring-fed pools, cold bogs; May, June; 323	Dickinson	1944
	---; ---; 323*	Beadle	1952
<i>parodites</i> Dyar	---; May, June and July; 323	Dyar	1928
<i>COLISETA</i> <i>alaskaensis</i> (Ludlow)	Common in <i>Carex</i> swamps, edges of pools and ponds, coastal marshes with vegetation usually open and unshaded; bites all day; 5°	Rempel	1953
	Shallow semi-permanent or permanent pools clogged with debris and vegetation; forested lowland, May-June; 5	Gjullin et al.	1961
	Dystrophic ponds within bogs, dense clumps of dead <i>Carex</i> ; ---; 5	Frohne	1956
	Permanent, long standing water, fresh water marsh, bog; ---; 5	Frohne	1954
	---; sheltered and shaded niches and crevices on cliffs and on the underside of boulders; 5	Sommerman	1964
	---; hibernate below snow in clumps of <i>Clavagrostis</i> grass; 5	Hopla	1965
	---; April-Sept.; 5	Stage & Chamberlain	1945
	---; ---; 5, 62, 323 (In late spring and summer in open pools, riverbeds)	Steward & McWade	1961
	Grassy pools along riverbeds; plains; 62	Dyar	1920
	Irrigated areas; ---; 62	Shemanchuk	1959
	---; open rocky country and moist spruce forests up to 1000 feet elevation, day biter; 62	Jenkins & Knight	1950
	---; bites in swampy forest, bite by day and early evening; 62°	Twinn et al.	1948

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULISETA alaskaensis</i> (Ludlow) (cont.)	---; April-July; 62. ---; ---; 323 (Grassy marshes, generally in river valleys, adults pass winter hiding in hollow logs and appear very early in the spring, bite man)	Dyar	1921
	---; very rare; 62	Hearle	1926
	---; May; 323	Dyar	1929
	---; light traps; 327	Twinn	1944
<i>Agarsi Coquillett</i>	---; May-July; 62. ---; ---, 351 (In the spring in cold bogs, males attracted to light)	Dyar	1921
	Spring in cold bogs; readily attracted to lights, May, July-Aug.; 323	Dyar	1922
<i>Impatiens</i> (Walker)	Dystrophic ponds within bogs, dense clumps of dead Carex; will bite at near freezing temperatures in early spring, frisking on the wing and resting on the snow, Jan.-March; 5°	Frohne	1956
	Semi-permanent or permanent pools; ---; 5	Gjullin et al.	1961
	Bog pools; ---; 5	Frohne	1954
	---; sheltered and shaded niches and crevices on the cliff, underside of boulder; 5	Sommerman	1964
	---; Apr.-Sept.; 5	Stage & Chamberlain	1945
	---; ---; 5, 62, 323 (Snow pools, ponds, and roadside puddles, March-early autumn, bite readily all day)	Steward & McWade	1961
	Dark permanent forest pools, shallow pools beside railroad tracks, dirty roadside pools; wooded mountain slopes, fairly common; 62	Hearie	1926
	---; feeds at dusk and vicious biter by day, but not in strong wind, May; 62°. Dark permanent forest pools, muddy water in road ruts; common from coast to coast; 323°	Rempel	1953
	---; in white spruce-lichen and spruce-moss forests up to 700 feet elevation; 62	Jenkins & Knight	1950
	---; May-Aug.; 62	Dyar	1920

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULISETA</i> <i>impatiens</i> (Walker) (cont.)	Shaded spring or snow-fed pools; rare in some areas; 323	Stage et al.	1952
	Dark, clear, woodland pools; fly after sunset; 323	Matheson	1944
	---; May-Aug.; 323	Harmston	1949
	---; Sept.; 323	Bickle	1952
	---; common, 323	Parker	1916
<i>incidentes</i> (Thomson)	---; May-June; 5	Stage & Chamberlain	1945
	---; rare; 5	Frohne	1956
	---; ---; 5, 62, 323 (Dirty, permanent pools, artificial containers, rarely bites man)	Dyar	1921
	---; ---; 5, 323 (Permanent pools, all year, hibernates as adults)	Matheson	1944
	Domestic, rainwater barrels, dirty salt-water pools, filthy ditches, ponds, clean woodland pools, open sloughs, rain-filled depressions in woods, edges of cottonwood flood swamps; hibernate in sheltered places, indoors, March and April, abundant; 62°	Hearle	1926
	Artificial pools or barrels; coastal regions, May-Sept.; 62	Dyar	1920
	Artificial containers; rarely bites man; 62	Rempel	1953
	Permanent and semi-permanent pools, artificial containers; experimentally infected with western equine encephalomyelitis, St. Louis and Japanese B encephalitis, abundant; 323	Stage et al.	1952
	Horse troughs; lower elevations and up to 8,000 feet; 323	Freeborn & Brookman	1943
	Permanent dirty pools; adults hibernate; 323	Dyar	1922
	Brackish water, spring water and snow pools in the mountains; ---; 323°	Freeborn & Bohart	1951
	---; experimental transmission of Japanese B encephalitis; 323	Hammon et al.	1949
	---; May, July-Sept.; 323	Harmston	1949

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>JYLISETA</i> <i>inornata</i> (Williston)	Shallow grassy depressions, amongst slough grass and wild barley, in stagnant highly alkaline water with sedges and bulrush, also in clear water depressions with clay bottom; enter houses in the fall to hibernate, potential vector of western equine encephalomyelitis and St. Louis encephalitis; 62	Rempel	1953
	Irrigated areas, pools, seepage pools of main canal, laterals and supply ditches; in visual-attraction traps, possible vector of western equine encephalitis, May-Sept. and Nov.; 62°	Shemanchuk	1959
	Roadside pools, edges of cottonwood flood swamps, permanent water pools, streambeds, artificial containers; fairly common; 62	Hearle	1926
	Weedy roadside ditches temporarily filled with water, grassy pasture depressions, semi-permanent depressions in bluffs, permanent depressions in partly dried-up streambeds; ---; 62	Rempel	1950
	---; Oct.; 62 (Permanent ground pools)	Dyar	1921
	---; ---; 62. Brackish coastal water; ---; 323 (Rarely bite man)	Steward & McWade	1961
	Poorly drained irrigated areas, shaded pools in forests up to 6000 feet elevation; naturally infected with western equine encephalomyelitis, experimental vector of St. Louis and Japanese B encephalitis, abundant; 323°	Stage et al.	1952
	Open grassy pools, lily ponds and polluted water, swampy areas; bites man occasionally, light trap, July-Sept., experimental transmission of western equine and St. Louis encephalitis; 323	Tate & Gates	1944
	Margins of ponds and permanent pools; numerous at times, very frequently enters houses, rarely bites man; 323	Beyer	1923
	Mashes, sinkholes, stump holes and artificial ponds; overwinter in houses and bite ferociously; 323	Ross	1947
	Open grassy pools, ditches, mashes, artificial containers; bite mostly evening and night, common; 323°	King et al.	1960
	Shaded, semi-permanent roadside pool; ---; 323	Darsie et al.	1951

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULISETA</i> <i>inornata</i> (Williston) (cont.)	Ex inct hot springs; ---; 323 Wet meadow; ---; 323 ---; below 8000 feet elevation; 323 ---; Sept.-June; 323	Dyar Lake Harmstor Carpenter & Chamberlain	1923 1953 1949 1946
<i>maccrackenae</i> Dyar & Knab	---; rare; 5 Pools overgrown with vegetation; rare; 323 Pools in streambeds with vegetation; ---; 323 Cool, clear pools in deep shade; ---; 323°	Frohne Stage et al. Dyar Freeborn & Bohart	1956 1952 1922 1951
<i>zelanura</i> (Coquillett)	Wooded and coastal regions; ---; 323 ---; ---; 62, 323 (Permanent water in swamps, overwinters under the ice) Small permanent water collections with or without vegetation, around bases of trees and stumps, open pools in muck lands, small grassy ponds of dark acid water in wooden swamp, spring water in sphagnum bog; sylvan, attracted to light traps, rare; 323	Matheson King et al.	1944 1960
	Sphagnum bogs and cedar swamps, shady, cool, acid water in permanent fresh-water swamps; possible vector of equine encephalitis; 323	Wallis	1960
	Artificial containers; diurnal; 323	Bick	1946
	Fresh water pond, occasionally cranberry bog; ---; 323	Bast	1963
	Shaded, roadside pool; ---; 323	Darsie et al.	1951
	---; naturally infected with eastern equine encephalitis; 323	Beadle	1952
	---; all year; 323	Carpenter & Chamberlain	1946
<i>minnesotae</i> Barr	---; ---; 62, 323	Stone	1965

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>JULISETA morsitans</i> (Theobald)	Pondlike bog inclusions, mostly in senescent bogs of the <i>Sphagnum-Ledum-Picea</i> class, choked with <i>Myrica gale</i> or <i>Carex</i> ; ---; 5	Frohne	1956
	Semi-permanent and permanent pools overgrown with <i>Carex rostrata</i> ; ---; 5	Gjullin et al.	1961
	---; July-Sept. 5	Sommerman	1964
	Common in habitats containing sedged and in cool shaded pools in a tamarack bog; ---; 62	Rempel	1953
	Common in heath and alder bogs where water is brown and acid; ---; 62. ---; ---; 323 (Marshes, bogs, cold pools, rarely bites man)	Steward & McWade	1961
	Spring-fed forest pools; ---; 62. In holes under old tree stumps, forest pools; ---; 323	Matheson	1944
	Unshaded pools with rank grass and fed by fresh water; rare; 323	Stringer et al.	1952
	Tamarack bog, cool shaded pools around base of tamarack hummocks; ---; 323	Ross	1947
	---; April-Oct.; 323	Fellton et al.	1950
<i>parodites</i> Dyar	---; ---; 323	Stone	1965
<i>particeps</i> (Adams)	Roadside ditches; ---; 5	Gjullin et al.	1961
	---; ---; 323	Stone	1965
<i>DEINOCERITES cancer</i> Theobald	Crabholes in marl soil of coastal marshes or in fresh-water swampy places, mostly in brackish or salt water habitats, cypress and maple swamp; rest on sides of crabholes, bite at night, rare; 323°	King et al.	1960
	---; Feb.-Dec.; 323	Carpenter et al.	1946
<i>exitudens</i> Knab	---; ---; 323	Rueger et al.	1950
<i>mathesonii</i> Belkin & Hogue	Crabholes; in light traps, all year; 323	Peyton et al.	1964

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>DEINOCERITES pseudes</i> Dyar & Knab	In holes of land crabs, along banks of small lake, brackish water, narrow heavily wooded strip along river bank, on beach; in light traps, on oil tankers, bites readily from dusk to midnight, all year; 323°	Peyton et al.	1964
<i>sororius</i> (Dyar & Knab)	Artificial containers; in light traps, enter houses by night; 323°	Fisk	1941
	Holes of the fiddler crab; nocturnal; 323°	Matheson	1944
<i>EUCOPETERA underwoodi</i> Underwood	Predaceous; common; 62, 323	Matheson	1944
<i>HAEMAGOGUS equinus</i> Theobald	---; ---; 323 (Arboreal, experimental vector of yellow fever)	Foote & Cook	1959
<i>JANTHINOSOMA musica</i> Say	---; July, rare; 323°	Felt	1904
<i>MANSONIA indubitans</i> Dyar & Shannon	<i>Pistia stratiotes</i> , pickerelweed, arrowhead and water hyacinth; attracted to light traps, bite readily, all year, peaks Sept. and April, abundant; 323°	King et al.	1960
	Common amongst aquatic vegetation; active and troublesome in the evening, rare; 323	Seabrook	1951
<i>perturbans</i> (Walker)	Attach to stems or roots of aquatic plants; rare; 62	Rempel	1953
	---; persistent in entering houses, vicious biter, July and Aug., fairly rare; 62	Hearle	1926
	---; near swamps, crepuscular, June; 62°	Twinn	1926
	---; in woods; 62	Downe et al.	1963
	---; ---; 62, 323 (On surface of ponds and waters with abundant emergent vegetation, spring and summer, attracted to light)	Steward & McWade	1961
	---; ---; 62 (Bites at twilight, late at night and during dark days)	Matheson	1944

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>MANSONIA perturbans</i> (Walker) (cont.)	Marshes and lakes with much emergent vegetation, <i>Typha</i> , <i>Carex</i> , <i>Pontederia</i> , <i>Sagittaria</i> , lake margins; in light traps, bite readily all day in shady, moist places, more active in early part of night, probable vector of eastern equine encephalitis; 323°	King et al.	1960
	Marshes with cattails and aquatic sedges, pickerelweed and arrowhead; voracious biter, especially on cloudy afternoons and crepuscular periods; 323	Koss	1947
	Permanent grassy swamps or margins of ponds; enter houses freely; 323	Lowry	1929
	Attached to sub-surface vegetation, associated with <i>Limnobium</i> ; ---; 323	Quinby	1941
	Fresh water; ---; 323	Darsie et al.	1951
	Swamp pools; ---; 323	Knutson	1943
	---; may transmit eastern equine encephalomyelitis in nature, vicious biter, rare in some areas; 323	Stage et al.	1952
	---; experimentally infected with <i>Wuchereria bancrofti</i> ; 323	Eyles & Most	1947
	---; naturally infected with eastern equine encephalitis; 323	Beadle	1952
	---; very prevalent and annoying during early spring; 323	Beyer	1923
	---; common, March-Dec., peak April, May and Aug.; 323	King et al.	1939
<i>pseudotitillans</i> Theobald	---; ---; 323	Lane	1953
<i>titillans</i> (Walker)	Sometimes pickerelweed, arrowhead and water-hyacinth, attached to floating grass, <i>Paspalum repens</i> ; bites viciously, rare; 323°	King et al.	1960
	Only on leaves and roots of water lettuce; light traps; 323	King et al.	1939
	---; June-Dec.; 323	Carpenter & Chamberlain	1946
	---; ---; 323 (Bites after dark)	Dyar	1928
<i>MEGARHINUS rutilus</i> (Coquillett)	Tree holes; rare; 323	King et al.	1939
	Bromeliads, predaceous; ---; 323	Seabrook	1951

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>MEGAPHINUS septentrionalis</i> Dyar & Knab	Mud puddle; in buildings, rare; 323	Beyer	1923
	Tree holes, rock holes, wooden receptacles, predaceous; ---; 323	Dyer	1928
	Tree holes in oak-hickory woods; ---; 323	Ross	1947
	Tires, artificial container; ---; 323	Lake	1953
	---; Jan., April-Oct.; 323	Carpenter & Chamberlain	1946
	---; Feb., March; 323	Wirth	1947
<i>OPHRISPODOMYIA alta</i> Baker	Tree holes, overwinter frozen in ice; rare; 323	King et al.	1960
	Artificial containers with organic matter; June-Sept.; 323	Breeland et al.	1961
	Soft maple tree hole; ---; 323	Ross	1947
	Tree holes; ---; 323	Matheson	1944
	---; Aug.-Nov.; 323	Barnes et al.	1950
	---, light traps; 323	Carpenter et al.	1945
<i>californica</i> Bohart	Tree holes, usually cottonwood, water of high pH; ---; 323	Freeborn & Bohart	1951
<i>kerni</i> Edwards	---; ---; 323	Stone	1961
<i>signifera</i> (Coquillett)	Water in decayed tree holes; rare; 323	King et al.	1960
	Tree hole, artificial container, highly polluted water; ---; 323°	Darsie et al.	1951
	Swampy area; ---; 323	Knutson	1943
	---; all year; 323	Carpenter & Chamberlain	1946
	---; coastland; 323	Beyer	1923
	---; arboreal; 323	Matheson	1944
<i>PSOROPHORA albipes</i> (Theobald)	---; ---; 323	Lane	1953
<i>champerico</i> Dyar & Knab	---; ---; 323	Lane	1953

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PSOROPHORA ciliata</i> (Fabricius)	---; ---; 62 (Small cracks in the soil, in rain pools, temporary waters, predaceous, May-Sept.)	Steward & McWade	1961
	Intermittently flooded grassy pools, ditches and depressions in open fields or marginal woodland area, willow swales; rest by day under vegetative cover, attracted to light, bite severe and persistent day and night, peak near dusk, abundant; 323°	Breeland et al.	1961
	Roadside ditches devoid of vegetation; rare; 323	Stearns et al.	1933
	Woods, open pools; grass, June, Sept.; 323	Horsfall	1936
	Rain pools; bite mostly on cloudy days and evenings; 323	Ross	1947
	Temporary rain pools, streambed pools, pasture potholes and flooded areas, margin or marshes and ponds; ---; 323	Rowe	1942
	Depressions and cracks in soil, natural pools, predaceous and cannibalistic; ---; 323	Schwardt	1939
	Grassy ditches, shallow grassy flats, rice-fields, everglades; ---; 323	King et al.	1950
	Roadside ditch adjoining salt marsh, normally in fresh water; ---; 323	Darsie et al.	1951
	Surface water, pothole, marsh; ---; 323	Bick	1946
	Permanent drainage canals; ---; 323	Beyer	1923
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	---; bites at bright daylight; 323	Knutson	1943
	---; March-Oct., Dec.; 323	Carpenter & Chamberlain	1946
	---; in light traps; 323	Edman & Downe	1964
	---; common; 323	King et al.	1939
<i>columbiae</i> (Dyar & Knab)	Ricefields, seepage puddles, natural depressions of soil, drainage and roadside ditches; rest in grass or low vegetation, in cars, most active at night; 323°	Schwardt	1939

TABLE I -- MOSQUITOES (continued)

SPECIES	BREEDING HABITATS: ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PSOROPHORA columiae</i> (Dyar & Knab) (cont.)	Open pools, houses; woods, active June-Nov., peak June-Oct.; 323	Horsfall	1936
	Grassy swales and depressions; common; 323	King et al.	1939
	Temporary rain pools, ruts or low places of a temporary nature; ---; 323	Shields	1938
	---; by the sea and on the streets, abundant and annoying; 323	Aitken	1940
	---; Jan.; 323	Beyer	1923
	---; May; 323	Quinby	1941
<i>confinis</i> (Lynch Arribálzaga)	Damp soil in depressions with vegetation; fierce biters, at night, abundant in the everglades and ricefields, all year, peak May-Oct.; 323°	Carpenter et al.	1946
	Drained and flooded ricefields; serious pest at night and bites all day, especially early morning and on dark days; 323	Horsfall	1942
	Temporary pools, grassy ditches, open grassy swales, ricefields and their ditches; bite in grassy or shady places by day; 323	King et al.	1960
	Artificial containers; common; 323	Rozeboom	1942
	Temporary rain pools of pastures and farm yards and other more or less open situations; ---; 323	Ross	1947
	Shallow ponds, puddles, road ruts; ---; 323	Good	1945
	Surface water, potholes, marsh; ---; 323	Bick	1946
	Irrigation overflow pools; ---; 323	Aitken	1940
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	---; light traps; 323	Chamberlain et al.	1964a
<i>citties</i> Dyar	---; August; 323	Dyar	1918

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PSOROPHORA cyaneescens</i> (Coquillett)	Transient pools, pool with suspended clay nearly free of vegetation; fields, thickets, about dwellings, bite in bright sunshine, rare; 323°	King et al.	1960
	Temporary pools in grassy fields and woodlands; bite day and night, vicious and persistent, also in full sunlight, April-Oct., abundant; 323	Breeland et al.	1961
	Shady flood and rain pools; ---; 323	Schwardt	1939
	Temporary rain puddles; ---; 323	Matheson	1944
	Pothole; ---; 323	Bick	1946
<i>discolor</i> (Coquillett)	Temporary ground pools and grassy ditches; attracted to light, bite day and night, abundant; 323°	Breeland et al.	1961
	Temporary rain puddles, brackish water; fly in sunshine, vicious and persistent biters; 323	Beyer	1923
	Grassy pools, ricefields; rare: 323	King et al.	1960
	Rain pools, weed-choked roadside ditch; ---; 323	Ross	1947
	Grassy and polluted ponds; ---; 323	Shields	1938
	---; April-Oct.; 323	Carpenter & Chamberlain	1946
<i>discrucians</i> (Walker)	---; May; 323	Beyer	1923
<i>ferox</i> (Humboldt)	Transient rain puddles; ---; 62°	Matheson	1944
	---; ---; 62, 323 (Temporary rain-filled pools in thickets and woodlands, occasionally in streambeds, potholes, common in and near thickets or forests, in the south, Mar.-Nov., in the north, May-Sept., persistent and painful biters)	Carpenter et al.	1946
	Temporary pools or depressions in woodlands, grassy pools or ditches on edge of tree growth, puddles from river overflows; bite day or night in or near woods, enter houses, abundant; 323°	King et al.	1960
	Flood pools, stream or river valleys; fierce biters, attack readily in shade during day; 323	Ross	1947
	Temporary rain pools; forests and shady spots, severe biter, common; 323	King et al.	1939

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PSOPHORA</i> <i>ferox</i> (Humboldt) (cont.)	Shaded rain pools; bite readily and attack in the open on cloudy days; 323	Steward & McWade	1961
	Swampy ponds, woodland pools, small marshy creeks; ---; 323	Good	1945
	Shallow pool in area with dense undergrowth; ---; 323	Darsie et al.	1951
	Temporary rain pools in the open; ---; 323	Dickinson	1944
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952
	---; light traps; 323	Chamberlain et al.	1964a
	---; March-Nov.; 323	Wirth	1947
<i>horrida</i> (Dyar & Knab)	Temporary rain pools in wooded areas; in or near woods, bite viciously; 323°	Rowe	1942
	Bottomland pools; bite readily in daytime; 323	Ross	1947
	Shaded temporary pools; rare; 323	King et al.	1960
	Temporary ground pools; ---; 323	Dyar	1922
	Heavily shaded pools; ---; 323	Matheson	1944
	---; Apr.-Sept., attack during day in shade; 323	Carpenter et al.	1946
<i>howardi</i> Coquillett	Shaded temporary pools; bite readily in wood, rare in most areas; 323°	King et al.	1960
	Temporary rainpools, cannibalistic and predaceous; rare; 323	King et al.	1939
	Permanent drainage canals; bite in daytime; 323	Beyer	1923
	Woodland pools, post oak flats of river valley, ruts in pasture; ---; 323	Ross	1947
	Surface water; ---; 323	Bick	1946
	---; experimental transmission of eastern equine encephalitis; 323	Beadle	1952

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PSOROPHORA howardi</i> Coquillett (cont.)	---; May-Oct.; 323	Carpenter & Chamberlain	1946
	---; peak June; 323	Horsfall	1936
	---; April; 323	Wirth	1947
<i>jaxicensis</i> Theobald	---; ---; 323	Dohanian	1920
<i>johnstonii</i> (Graham)	Temporary shady rain pool in limestone depression with <i>Sesuvium portulacastrum</i> near buttonwood zone, partially shaded clear water pools with <i>Bacopa monnieri</i> , sunlit pothole with decaying vegetation; in light traps, bites all day in shade or bright sunlight, April, Oct., Dec., rare; 323°	King et al.	1960
	Potholes, densely shaded, shallow, rain-filled depression, deep, sunlit pools; ---; 323	Thurman et al.	1951
	---; ---; 323	Stone	1965
<i>longipalpus</i> Randolph & O'Neill	Heavily shaded temporary rain pools; ---; 323	Gerhardt	1966
	---; rare; 323	King et al.	1960
	---; April; 323	Wirth	1947
<i>mexicana</i> (Bellardi)	---; ---; 323	Stone	1965
<i>posticata</i> Wiedemann	Shallow pool formed by overflow of small creek with dense undergrowth; bites severely; 323°	Stearns et al.	1933
	Woods, pools; April, June, peak April; 323	Horsfall	1936
<i>pygmaea</i> (Theobald)	Temporary rain pools; ---; 323	Dyar	1928
	---; in light traps, June-Oct., rare; 323	King et al.	1960
<i>saxi</i> Dyar & Knab	---; Aug.; 62 (Temporary rain puddle, rare, bite in daytime in the open)	Dyar	1921
	Puddles and pools of rain water, especially formed in palmetto flats; bites man viciously by day and enters houses; 323°	Beyer	1923
	---; ---; 323	Séguy	1924
<i>signipennis</i> (Coquillett)	Small transient rain pools; rare; 62°	Rempel	1953
	; ---; 62	Stone	1965

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PSOROPHORA signipennis</i> (Coquillett) (cont.)	Temporary rain pools in arid country; bites by day and in the evening; 323	Dyar	1922
	Temporary ground pools, creek pools, in artificial containers; rarely bites man; 323	Rozeboom	1942
	Transient pools and irrigated fields; plains and valleys, in light traps, rare; 323	King et al.	1960
	Flooded areas, intermittent marsh; June-Aug., vicious biter; 323°	Rowe	1942
	River pools; common in summer and autumn; 323	Barber	1939
	Roadside pools, evanescent rain pools in arid plain sections; ---; 323	Mail	1934
	---; May-Oct.; 323	Edman & Downe	1964
<i>texana</i> Dyar & Knab	---; ---; 323	Dohanian	1920
<i>varipes</i> (Coquillett)	Overflow pools of streams and rivers in dense swamps, in floatage; grasslands, bottomland areas, bite day to dusk, peak afternoon, May-Oct., abundant; 323°	Breeland et al.	1961
	Temporary woodland pools and floodwaters in mats of debris; along streams and rivers, wooded swamps; 323	King et al.	1960
	Temporary rainpools; exceedingly annoying in woods, severe biter, common; 323	King et al.	1939
	Overflow pools; dense woods, peak May, July; 323	Horsfall	1936
	Cypress bottoms; vicious biter. April; 323	Ross	1947
	Shaded temporary water; attack any time; 323	Matheson	1944
<i>STEGOMYIA signifer</i> Coquillett	Somewhat foul water; ---; 323	Felt	1904
<i>TAENIORHYNCHUS perturbans</i> Walker	Marsches and reedy edges of ponds; enters houses, persistent and vicious biter, June and July; 62°	Twinin	1926a
	---; woods; 62	McLintock	1944
	Permanent ponds, lake; enter houses; 323°	Owen	1937
	---; April-Oct.; 323	Wirth	1947

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITAT; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>THEOBALDIA</i> <i>alaskaensis</i> Ludlow	---; ---; 5, 62 (Troublesome, bites above snow, in the tundras)	Martini	1930
	Grassy marshes in river valleys; ---; 323	Mail	1934
<i>diari</i> Coquillett	---; May and June; 62	Hearle	1927
	---; forests; 323	Séguy	1924
<i>impatiens</i> Walker	---; ---; 5	Freeborn	1926
	Ponds; ---; 62	McLintock	1944
	---; March-Aug.; 62	Hearle	1927
	Deep snow water pools and springs; in mountains in the timbered areas, feed only in the evening about dusk and at times are very vicious, May-Aug.: 323°	Rees	1943
	Deep woodland pools, shallow and well shaded pools, rarely in the open, in water of pH 6.8 to 7.0; numerous in April and May; 323	Mail	1934
	Large mat pool; rare; 323	Irwin	1943
	---; in high mountain woodlands, bites very viciously just at dusk; 323	Rees	1934
<i>incidentis</i> Thomson	---; ---; 5, 323 (Mountains and coast)	Séguy	1924
	---; Jan., March-Sept.; 62	Hearle	1927
	Deep spring pools, artificial containers in the vicinity of houses, roadside pools and around artesian wells; occasionally attacks man; 323°	Rees	1943
	Domestic, all types of permanent pools; all year; 323	Freeborn	1926
	Clear, cold spring pools; ---; 323	Rees	1934
	Permanent, foul pools; ---; 323	Mail	1934
<i>inornata</i> (Williston)	Cool, shaded pools; woods, houses; 62	McLintock	1944
	---; March, April and July-Aug.; 62	Hearle	1927
	Snow pools; plains areas and in the mountains up to 9,000 feet, timber regions but also in the open, bite man occasionally especially in the evening or in the shade of the wooded areas; 323°	Rees	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>THEOBALDIA</i> <i>inornata</i> (Williston) (cont.)	Spring pools, ponds and streambed pools, permanent ponds and in evanescent rain pools often foul from stagnation or dumpage; April; 323	Rowe	1942
	Permanent pools, partly dried up streams where deeper pool remain; June-Sept., enters houses, occasionally bites man; 323	Mail	1934
	Clear, cool waters of stream pools, seepages and temporary rain pools, abundant in winter; 323	Rozeboom	1942
	Open grassy pools, artificial water containers; common; 323	King et al.	1939
	Swamps; common in summer and autumn; 323	Barber	1939
	Marshes, temporary rain pools, woodland pools, margin of ponds, ---; 323	Owen	1937
	Wet weather pond in an open cow pasture, ditches; ---; 323	Shields	1938
	Large mat pool; ---; 323	Irwin	1943
	---; rare, cooler spring and fall months; 323	Quinby	1941
	---; March-April, peak March; 323	Horsfall	1936
	---; Oct.; 323	Christensen & Harmston	1944
<i>macroura</i> Dyar & Knab	---; wooded parts of valley and along coast; 323	Freeborn	1926
<i>macroura</i> (Coquillett)	Permanent leather leaf bogs and liver pools, in root holes; July-Nov., peak Oct.; 323	Knutson	1943
	Small permanent collections of water; sylvan, rare; 323	King et al.	1939
	Bases of trees and stumps; ---; 323	Shields	1938
	Pools in sphagnum swamps; ---; 323	Stearns et al.	1933
<i>versicolor</i> (Theobald)	---; May; 62	Winn & Beaulieu	1932
	Deeper pools of lake mat and swamp, shaded portion of beach pool; bases of trees and stumps near breeding pools, May and Aug., common; 323	Irwin	1943

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>THEOBALDIA</i> <i>morsitans</i> (Theobald) (cont.)	Seepage, spring-fed pools, root holes with constant level of water; April-July, peak May; 323	Knutson	1943
	Permanent marshy border of lake, intermittent marsh near lake; ---; 323	Rowe	1942
	Cold forest pools, marshes, temporary rain pools; ---; 323	Owen	1937
<i>TOKORHYNCHITES</i> <i>rutilus</i> (Coquillett)	---; ---; 323	Stone et al.	1959
<i>rutilus</i> <i>rutilus</i> (Coquillett)	Tree holes, artificial containers, predaceous and cannibalistic; crepuscular, in woods, rare; 323	King et al.	1960
<i>rutilus</i> <i>septentrionalis</i> (Dyar & Knab)	Tree holes, artificial containers, predaceous and cannibalistic; forests, March, May and Sept., rare, et al. 323	Breeland	1961
	---; active by day and early evening; 323	King et al.	1960
<i>septentrionalis</i> (Dyar & Knab)	Tree holes; ---; 323	Darsie et al.	1951
<i>URANOTAENIA</i> <i>anhydor</i> Dyar	Permanent ponds in spring; rare; 323	Dyar	1922
	Pond filled with cattails; ---; 323	Matheson	1944
	Reedy swamp; ---; 323	Dyar	1907
<i>anhydor</i> <i>anhydor</i> Dyar	---; ---; 323	Stone	1961
<i>anhydor</i> <i>syntheta</i> Dyar & Shannon	---; ---; 323	Stone	1965
<i>coatzacoalcos</i> Dyar & Knab	---; ---; 323	Lane	1953
<i>geometrica</i> Lutz	---; ---; 323	Lane	1953
<i>lowii</i> Theobald	Small ground pools; ---; 5	Dyar	1922
	Ground pools, grassy pond and lake margins, pool with <i>Myriophyllum verticillatum</i> ; in light traps, rare; 323	King et al.	1960
	---; in building; 323	Beyer	1923
	---; all year; 323	Carpenter & Chamberlain	1946

TABLE I - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CRAMPTONIA</i> <i>cophirina</i> (Osten-Sacken)	---; at light; 62 (Permanent pools and ponds with emergent or floating vegetation, bites man)	Steward & McWade	1961
	Permanent pools with water hyacinth, <i>Piaropus crassipes</i> ; dark moist crevices in walls and between bricks, abundant; 323 (Semi-permanent ground pools, below leaves of <i>Lemna</i> warm stagnant pools with <i>Spirogyra</i> , bites man)	Hinman	1935
	Permanent pools, ponds and lakes containing emergent and floating vegetation; in damp situations in culverts, amongst vegetation, rarely bites man; 323°	Carpenter et al.	1946
	Permanent grassy pools, swamps and vegetation at lake margins, in <i>Lemna</i> ; in caves and hollow trees, in light traps, common; 323	King et al.	1960
	Permanent or semi-permanent ponds in weed-choked situations, cattail marshes, dense marginal growth of <i>Jussiaea</i> ; ---; 323	Ross	1947
	Permanent collections of water, in wet hoof prints, depressions in creek beds, damp under-brush and logs in swamps; ---; 323	Rozeboom	1942
	Meadows, open swamp areas well overgrown with floating vegetation; ---; 323	Headlee	1945
	Marshes, temporary rain pools, bog in sphagnum mat; ---; 323	Owen	1937
	Generally associated with other fresh-water mosquitoes; ---; 323	Darsie et al.	1951
	Ornamental pools, among water chestnut; ---; 323	Good	1945
	Temporary rain pools in the open; ---; 323	Dickinson	1944
	---; grasses at tree bases and stumps in swamps; 323	King et al.	1939
	---; in building; 323	Beyer	1923
	---; all year; 323	Carpenter & Chamberlain	1946
	---; rare; 323	Stearns et al.	1933

TABLE 1 - MOSQUITOES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CRANOTAENIA</i>			
<i>socialis</i> Theobald	Permanent pools; ---; 323	Dyar	1922
<i>syncheta</i> Dyar & Shannon	Swamps and riverbeds; common in summer and autumn; 323	Barber	1939
	Ground pools; ---; 323	Dyar	1928
<i>WYFOMIA</i>			
<i>bahama</i> Dyar & Knab	---; ---; 323	Bonne & Bonne-Wepster	1925
<i>lynnei</i> Dodge	Pitcher plant <i>Sarracenia purpurea venosa</i> ; rare; ---; in sandy areas overgrown with scrub oak; 323	King et al.	1960
<i>mitchellii</i> (Theobald)	Only at the base of epiphytic Bromeliaceae leaves; bite readily all day in shady humid woodlands, yards, greenhouses with bromeliads, all year, rare; 323°	King et al.	1960
	---; occasionally bite man; 323	Carpenter et al.	1946
	---; in light traps; 323	Chamberlain et al.	1964 a
<i>smithii</i> (Coquillett)	In leaves of pitcher plants, where they overwinter, growing in bogs and marshes; all year; 62	Steward & McWade	1961
	Ground pools still covered with snow and ice, taller, pitcher-shaped leaves exposed to the sun; ---; 62	Rempel	1953
	New leaves; all year, peak Aug.-Sept.; 323	Knutson	1943
	Only in <i>Sarracenia purpurea</i> ; rare; 323	King et al.	1939
	Tamarack bogs, pitchers of <i>Sarracenia purpurea</i> , overwinter in pitcher plants; ---; 323	Ross	1947
	Leaves of plants, pitcher plants from a sphagnum bog; ---; 323	Dickinson	1944
	---; common in bog area; 323	Irwin	1943
	---; nocturnal 323	Dyar	1928
<i>vanduzeei</i> Dyar & Knab	Leaf bases of epiphytic Bromeliaceae; bite readily, rare, all year; 323°	King et al.	1939

TABLE 1 - MOSQUITOES (con. lusion)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>WYEOMYIA</i> <i>duzeei</i> Dear & Knab (cont.)	---; occasionally bite man; 323 ---; light traps; 323 ---; in woods; 323	Carpenter et al. Dow et al. King et al.	1946 1964 1960

TABLE 2 - SUMMARY OF DISEASES OR DISEASE ORGANISMS TRANSMITTED BY MOSQUITOES

SPECIES	DISEASE ORGANISM					DISTRIBUTION
	: VIRUS &	:	:	:	:	
	: RICKETTSIA	: PROTOZOA	: HELMINTHS	: OTHER	:	
<i>AEDES</i> <i>aegypti</i> (L.) <i>naeus</i>	Dengue & Yellow fever					323
<i>cantator</i> (Coquillett)	Equine encephalomye- litis					323
<i>ANOPHELES</i> <i>albimanus</i> Wiedemann	Malaria					323
<i>barberi</i> Coquillett		<i>Plasmodium</i> <i>vivax</i>				323
<i>crucians</i> Wiedemann	Malaria					323
<i>freeborni</i> Aitken	Malaria					323
<i>maculipennis</i> Meigen	Malaria					323
<i>maculipennis</i> <i>freeborni</i> Aitken	Malaria					62, 323
<i>maculipennis</i> <i>occidentalis</i> Dyar & Knab	Malaria					323
<i>pseudopunctipennis</i> <i>franciscanus</i> McCracken	Malaria					62, 323
<i>pseudopunctipennis</i> <i>pseudopuncti-</i> <i>pennis</i> Theobald	Malaria					323
<i>punctipennis</i> (Say)	Malaria					323
<i>quadrimaculatus</i> Say	Malaria					323

#### B. BLACK FLIES

The black fly entries constitute a large number of species, with documentation of their biology. No disease transmission was recorded. In the table are listed 234 species or subspecies.

TABLE 1 - BLACK FLIES

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CNEPHIA</i> <i>abdita</i> Peterson	Small stream; May-June; 62	Davies et al.	1962
	---; ---; 62, 323 (Temporary rivulet and pools close to a spring source on the undersides of grass blades, in curled-up leaves, or crevices in leaf stems, often in very slow current, April-May)	Stone	1965
<i>borealis</i> (Malloch)	---; Aug.; 5	Jenkins	1948
	---; ---; 62	Hocking & Pickering	1954
<i>lacustris</i> (Dyar & Shannon)	Outlet stream; stones and moss; 62	Wolfe & Peterson	1959
	Mainly in streams and near outlets of lakes; April-June; 62	Davies et al.	1962
	Rivers; rare; 62	Fredeen	1958
	---; active in the morning and evening; 62	Wolfe & Peterson	1960
	---; active July-Aug.; 62	Hocking & Richards	1952
	---; ---; 62, 323 (occurs in enormous numbers, usually in out-flow streams from lakes and ponds, April-May)	Stone	1964
	Warm pond, lake outlets, surface of water; stones and vegetation above water, April-June; 323	Stone & Jammback	1955
<i>devaria</i> Davies, Peterson & Wood	Small shallow, muddy bottomed drainage stream; May; 62	Davies et al.	1962
<i>emergens</i> Stone	Upland, semi-upland and lowland streams, attached to rocks, stones, sticks and vegetations; May-Aug.; 5	Sommerman et al.	1955
	Streams; ---; 62	Peterson & Wolfe	1958
	---; ---; 323	Stone	1965
<i>erectipes</i> Shewell	Lowland streams, among vegetation, on bark and sticks; May-July; 5	Sommerman et al.	1955

TABLE I - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CNEPHIA</i> <i>eremites</i> Shewell (cont.)	Small stream draining the end of a shallow lake with over-hanging banks of carex marsh and a bed of fine gravel, attached to rocks and twigs; among dwarf bushes and other herbage by the stream banks, June-Aug.; 62	Shewell	1952
<i>freytagi</i> DeFoliat & Pete son	---; ---; 323	Stone	1965
<i>invenusta</i> (Walker)	Swift flowing, permanent streams, attached to the trailing moss in stream; May-June; 62	Wolfe & Peterson	1959
	Along the river shores; early spring; 62	Peterson & Wolfe	1958
	---; ---; 62, 323 (Among moss on rocks in swiftly flowing water, unbroken waters of permanent streams at a depth of one to four feet, emerge in the early spring)	Stone	1964
<i>jeanae</i> DeFoliat & Peterson	---; ---; 323	Stone	1965
<i>loisae</i> Stone & Jannback	Streams with sandy bottom and large rocks; March-May; 323	Stone & Jannback	1955
<i>minus</i> (Dyar & Shannon)	Lowland lake-outlet stream, on vegetation and sticks; June; 5	Sommerman et al.	1955
	---; ---; 323	Stone	1965
<i>mutata</i> (Malloch)	---; bog area near sea level, area shaded from direct sunlight, July; 5	Jenkins	1948
	---; ---; 5, 62, 323 (Common in small temporary or permanent forest streams attached to small stones, sticks and occasionally trailing grasses, attracted to man, although it rarely bites, Apr.-May)	Stone	1964
	Small stones and pebbles in shallow waters of forest streams, seepages, small permanent streams; border vegetation, May-Aug.; 62	Wolfe & Peterson	1955
	---; active in the morning and in the evening; 62	Wolfe & Peterson	1960
	Numerous in streams with sandy bottoms with few rocks and pebbles, abundant trailing grass; rocks, grass on stream edges. March, May-June, Nov.-Dec.; 323	Stone & Jannback	1955

TABLE I BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Culicoides</i> <i>cornifrons</i> Davies, Peterson & Wood	---; ---; 62	Stone	1965
<i>osborni</i> (Stains & Knowlton)	---; ---; 323	Stone	1965
<i>gilliipes</i> (Fries)	Mountain and bog drainage streams with rocky bottoms at 3,000 feet elevation; Aug.; 5	Jenkins	1948
<i>guanorum</i> (Riley)	---; ---; 323° (Small streams and in the vicinity of larger rivers, on floating vegetation, on rocks, under water and streambed, attached to sticks or green vegetation)	Stone	1964
<i>scutellifer</i> Stone	---; ---; 323	Stone	1965
	Semi-upland and lowland stream, submerged branches, wood and trailing vegetation; May-Sept.; 5	Sommerman et al.	1955
	Lake outlet; ---; 5, 62, 323	Stone	1952
	Streams and rivers; very rare; 62	Fredeen	1958
	---; June and July; 62	Hocking & Pickering	1954
<i>saskatchewanensis</i> Shewell & Fredeen	Emergent vegetation in swift streams; May and July; Shewell & 62		
<i>cottermanae</i> Stone	Upland, small, cold streams abundant with rocks and trailing vegetation; May-Sept.; 5	Sommerman et al.	1955
	---; ---; 62	Hocking & Pickering	1954
<i>stewarti</i> Coleman	---; ---; 323	Stone	1965
<i>subvarians</i> (Edwards)	---; ---; 62	Davies	1952
<i>coquillettiifrons</i> (Enderlein)	Streams and rivers; rare; 62	Fredeen	1958
	---; June; 62	Hocking & Pickering	1954
	---; ---; 323	Stone	1965
<i>villaea</i> DeFoliat & Peterson	---; ---; 323	Stone	1965

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CNETHA</i>			
<i>taeniatifrons</i> Enderlein	---; ---; 323	Enderlein	1925
<i>EUSIMULIUM</i>			
<i>aureum</i> Fries	Lake outlets, marsh and bog drainage streams with bottoms of sticks, wood and rock, outlet of beaver dam; about 2500 feet elevation, July-Aug.; 5	Jenkins	1948
	Small, shallow permanent streams; ---; 62	Hearle	1932
	---; July-Aug.; 62	Twinn et al.	1948
	---; May, June, Aug.; 323	Stains & Knowlton	1943
<i>aureum</i> <i>bracteatum</i> Coquillett	---; May; 62	Winn & Beaulieu	1932
	---; ---; 323	Dyar & Shannon	1927
<i>baffinensis</i> (Twinn)	Head waters of creeks; locally common, July; 62	Hocking & Pickering	1954
<i>baffinense</i> <i>palea</i> Twinn	Common in small streams and rapids of creeks; July; 62	Twinn et al.	1948
<i>boreale</i> (Malloch)	Small, slow-flowing streams with rocks; ---; 62	Hearle	1932
	---; July; 323	Stains & Knowlton	1943
<i>canonicolum</i> Dyar & Shannon	---; ---; 323	Dyar & Shannon	1927
<i>cuarum</i> Dyar & Shannon	Small to moderate, swift, shallow streams with stony ripples; pupae often attached to submerged trailing grass; 62	Hearle	1932
	---; March, June, July; 323	Stains & Knowlton	1943
<i>congareenarum</i> Dyar & Shannon	---; ---; 323	Dyar & Shannon	1927

<i>nova</i> (Dyar & Shannon)	---; ---; 62, 323	Stone	1965
<i>tibblesi</i> Stone & Jamnback	---; ---; 62, 323	Stone	1965
<i>PARASIMULIUM</i>			
<i>furcatum</i> Malloch	---; ---; 323	Stone	1965
<i>PROSIMULIUM</i>			
<i>alpestre</i> Dorogostajskij, Rubzov & Vlasenko	Upland and semi-upland streams in submerged branches, sticks, poles and those resisting the current, also attached to stones; May- Sept.; 5	Sommerman et al.	1955
	---; ---; 62	Stone	1965
<i>browni</i> (Twinn)	---; June-Aug.; 62	Hocking & Richards	1952
<i>caudatum</i> Shewell	---; ---; 62, 323	Stone	1965
<i>daviesi</i> Peterson & DeFoliatr	---; ---; 323	Stone	1965
<i>decemarticulatum</i> (Twinn)	---; stream; 5	Stone	1952
	---; ---; 5, 62, 323 (Temporary lowland streams, bog seeps, forest-drainage creeks and young streams associated with swampy forest areas, early spring species)	Stone	1964
	Cage trap in the stream; May; 62	Shewell	1952
	Creek; rar. 62	Hocking & Pickering	1954
<i>dicentris</i> Dyar & Shannon	---; May, July; 323	Stains & Knowlton	1943
<i>dicum</i> Dyar & Shannon	---; ---; 5, 62, 323	Dyar & Shannon	1927
<i>doveri</i> Sommerman	---; ---; 5	Stone	1965
<i>esselbaughii</i> Sommerman	Clear, cold permanent spring-fed forest streams, attached to rocks surfaces, under loose stones, flies or to large roots in the talus; attracted to man, active throughout the twilight hours and lasted through the night, May-Sept., peak June; 5°	Sommerman	1964

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PROSIMULIUM</i>			
<i>exigens</i> Dyar & Shannon	---; ---; 62, 323	Scone	1965
<i>erigum</i> Dyar & Shannon	---; May, July; 323	Stains & Knowlton	1943
<i>flavizantenum</i> (Stains & Knowlton)	---; May, June, July; 323	Stains & Knowlton	1943
<i>fontatum</i> Syme & Davies	Cool, small spring-fed and bog-fed streams, on rocks and vegetation and in the sand at the bottom of small pools; Apr.-June; 62° ---; June-Aug.; 62	Davies & Syme	1958
<i>formosum</i> Shewell	---; ---; 62	Stone	1964
<i>frohnei</i> Sommerman	---; ---; 5	Stone	1965
<i>fulvithorax</i> Shewell	-; ---; 62	Stone	1965
<i>fulvum</i> (Coquilletti)	Clear, tumbling upland streams, attached to moss-covered rocks; May-Sept.; 5 ---; common along coast from sea level to altitudes of 3,000 or more feet, active early in the morning and late in the evening, June-Aug.; 5 ---; ---; 5, 62, 323 (Common in mountain regions, bites man)	Sommerman et al.	1955
	Spring-fed streams; early spring; 62°	Jenkins	1948
	---; common at elevations of from 4000 to 5000 feet; 62	Peterson & Wolfe	1958
	---; July, Sept.; 323	Hearle	1932
		Stains & Knowlton	1943
<i>fuscum</i> Syme & Davies	Larger streams of swift current, creeks of moderate flow, on rocks and vegetation; April-Nov.; 62° ---; ---; 62, 323 (Early spring species, prefers rapid streams, bites man)	Davies & Syme	1958
		Stone	1964

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PROSIMULIUM gibsoni</i> (Twinn)	Clear, shallow, often temporary streams, submerged trailing grass and reeds; April-May; 62 ---; common, June; 62 ---; ---; 62, 323 (Clear temporary drainage streams, attached to rocks and trailing grasses, April-May)	Davies et al. Hocking & Pickering Stone	1962 1954 1964
<i>hirutipes</i> (Fries)	Cold, fast mountain streams and cold bog streams from near sea level to elevations of 4,000 feet, lower side of rocks and wood, bites all hours of the day but most numerous in the evening, in buildings and open areas; 5° Deflecting surfaces and underside of loose stones, trailing branches, leaves, vegetation and submerged wood; May-Sept., peak June; 5°	Jenkins Semmerman et al.	1948 1955
	Creek, river drainage basin, lake-cutlet, streams, on stony with low border vegetation and trailing grasses, logs on dams; low shrubs, in caves near stones or ground level, on treetops by night, attracted to light, active in the morning and evening; 62°	Wolfe & Peterson	1960
	Swiftly flowing water close to banks, watercourses, small shallow waterways with cascades, rapids and rock bed; small cascades and waterfalls, May-July; 62	Wolfe & Petersen	1959
	All types of streams, infant spring-fed, young and adolescent streams; common in spring; 62 ---; Aug.; 62	Peterson & Wolfe Hocking & Richards	1958 1952
	Fall in streams, partially exposed fine roots moistened by spray from water flowing over a dam; abundant, warm climate, April-July, Oct.-Dec., peak May; 323°	Stone & Jamnback	1955
	---; March; 323	Dyar & Shannon	1927
<i>longilobum</i> Peterson & DeFoliart	---; ---; 323	Stone	1965

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PROSIMULIUM</i> <i>magnum</i> Dyar & Shannon	On rocks, wood or other objects in the stream; April, May; 62	Davies et al.	1962
	Temporary streams; Mar.; 62°. ---; April-July; 323°	Stone	1964
	On leaf or stone in swift stream; ---; 323	Dyar & Shannon	1927
	Stream; lowlands; 323	Stone & Jamback	1955
<i>mixtum</i> Syme & Davies	Slow, current streams, creeks, on rocks and vegetations; March-Nov.; 62°	Davies & Syme	1958
	---; ---; 62, 323	Stone	1965
	Small streams or creeks with moderate flow; ---; 323°	Stone	1964
<i>multidentatum</i> (Twinn)	Swift flowing waters above falls; June; 62	Wolfe & Peterson	1959
	Cage trap in the stream; ---; 62	Shewell	1952
	Rivers; ---; 62	Petersen & Wolfe	1958
	---; Apr.-May; 62, 323	Stone	1964
<i>mutation</i> Malloch	---; ---; 5, 62, 323	Malloch	1914
<i>novum</i> Dyar & Shannon	Fast cold streams under sides of rocks; at an elevation of 3,000 feet, July-Aug.; 5	enkins	1948
	---; ---; 62°	Hearle	1932
	---; ---; 62, 323	Dyar & Shannon	1927
<i>orychadactylum</i> Dyar & Shannon	Trailing grass stems and submerged sticks, rocks and branches, attached to sandy and pebbly cases to logs or loose stones; May-Sept.; 5	Sommerman et al.	1955
	Clear mountain and bog drainage streams and waterfalls at elevations from near sea level to 1,000 feet, on rocks and gravel; ---; 5	Jenkins	1948
	---; ---; 62	Hocking	1950
	---; ---; 323	Stone	1965

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE

<i>pecuarium</i> Riley	---; ---; 323	Stains & Knowlton	1943
<i>perspicuum</i> Sommerman	---; ---; 5	Stone	1965
<i>pleurale</i> Malloch	Fast, clear mountain streams and bog drainage streams with bottoms composed of rocks and boulders at altitudes of 800 and 2,000 feet; attracted to man; 5  Submerged or trailing branches; May-Sept.; 5	Jenkins	1948
	---; June; 62	Sommerman et al.	1955
	---; April; 323	Wolfe & Peterson	1959
		Stains & Knowlton	1943
<i>rhizophorum</i> Stone & Jamback	Small, temporary, rapid streams in forested areas; April-May; 323	Stone & Jamback	1955
<i>saltus</i> Stone & Jamback	Foot of small temporary cascade falling off shale cliff, small stones in stream; April, May; 323	Stone & Jamback	1955
<i>shewelli</i> Peterson & DeFoliart	---; ---; 323	Stone	1965
<i>tenuical</i> Enderlein	---; ---; 323	Enderlein	1925
<i>travisi</i> Stone	Shallow streams; June-Sept.; 5	Sommerman et al.	1955
	---; ---; 62, 323	Stone	1965
<i>uinta</i> Peterson & DeFoliart	---; ---; 323	Stone	1965
<i>unicum</i> (Twinn)	---; ---; 323	Stone	1965
<i>ursinum</i> (Edwards)	Upland tumbling streams, attached to stones; June-Sept.; 5 ---; ---; 62	Sommerman et al.	1955
		Stone	1965

TABLE I - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PROSIMULIUM</i> <i>vermale</i> Shewell	Small shallow stream draining an extensive swamp and wooded areas, in stream debris; May; 62	Shewell	1952
<i>SCHOENBAUERIA</i> <i>furculata</i> Wolfe & Peterson	---, July; 62	Wolfe & Peterson	1959
<i>SIMULIUM</i> <i>aestivum</i> Davies, Peterson & Wood	Small, clear, cool stenothermal streams, which usually arise from a bog or spring source and pass through moderately dense woods; June; 62	Davies et al.	1962
<i>aldrichianum</i> Enderlein	---; ---; 323	Vargas	1945
<i>arcticum</i> Malloch	Semi-upland and lowland streams, submerged branches, vegetation and the underside of loose stone; May-Sept.; 5	Sommerman et al.	1955
	Streams, lake outlet, bog drainage stream in coastal areas below 500 feet elevation, rocks and on wood; at an elevation of 4,000 feet; 5	Jenkins	1948
	---; lake shore, most active at noon; 5°	Weber	1950
	Vegetation and rocks in large fast-flowing tributaries of the river, rarely in irrigation canals; June-Sept.; 62°	Fredeen & Shemanchuk	1960
	Large rivers at points where rocks and boulders form shallow ripples, small permanent streams; ---; 62	Hearle	1932
	---; April; 62	Fredeen	1964
	---; ---; 126	Smart	1944
	---; abundant by the river. Sept.; 323	Petersen	1960
<i>argus</i> Williston	---; ---; 62	Stone	1965
	Small, spring-fed stream of moderate flow; ---; 323	Stone & Boreham	1965
<i>asakakae</i> Smart	---; ---; 126	Smart	1944
<i>aureum</i> Fries	Lowland streams, in submerged vegetation, bark, sticks and stems; July-Sept.; 5	Sommerman et al.	1955
	Small drainage, supply ditches, among pebbles and grass leaves in slow-flowing water; July-Sept.; 62°	Fredeen & Shemanchuk	1960

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SIMULIUM aureum</i> Fries	Adolescent streams, mature and old rivers; spring and autumn; 62	Peterson & Wolfe	1958
	Emergent vegetation in swift streams; ---; 62	Shewell & Fredeen	1958
	Warm, slow-moving lake outlets; ---; 62. Trailing grass or leaves, warm meadow streams, lake outlets; April-Aug.; 323	Stone & Jamnback	1955
	---; forest, rare, June, 62. ---; ---; 351	Wolfe & Peterson	1959
	Small, spring-fed streams of moderate flow; ---; 323	Stone & Boreham	1965
<i>baffinense</i> Twinn	Slow, lowland streams, among trailing vegetation and leaves; July-Sept.;	Sommerman et al.	1955
	Streams, creeks; June; 62	Davies et al.	1962
	---; ---; 323	Stone	1965
<i>bezmeri</i> Stains & Knowlton	---; July; 323	Stains & Knowlton	1943
<i>bicornis</i> Dorogostajskij, Rubzov & Vlasenko	A wide variety of streams, among stones and trailing grass; June-Sept.;	Sommerman et al.	1955
	---; ---; 62, 323	Stone	1965
<i>bivittatum</i> Malloch	Rivers and large irrigation canals, on shrubs and branches of willows dipping into fast-flowing water, on grasses and other aquatic vegetation; June-Sept.; 62°	Fredeen & Shemanchuk	1960
	---; ---; 62, 323	Stone	1965
<i>boreale</i> (Malloch)	---; ---; 323	Vargas	1945
<i>bracteatum</i> Coquillett	---; July and Aug., 62	Walker	1927
	Small streams; June-Oct.; 323	Jobbins-Pomeroy	1916
	---; house windows; 323	Forbes	1912
<i>brevicerum</i> Knowlton & Rowe	---; ---; 323	Knowlton & Rowe	1934

TABLE I - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SIMULIUM</i> <i>browni</i> Twinn	Stream; ---; 62	Twinn	1936
<i>canadense</i> Hearle	---; ---; 62 ---, April; 323	Vargas	1945
<i>canonicola</i> (Dyar & Shannon)	---, ---; 62, 323	Stains & Knowlton	1943
<i>commiculum</i> (Dyar & Shannon)	Rivers; rare; 62 Emergent vegetation in swift streams; ---; 62	Fredeen	1958
<i>clarum</i> Dyar & Shannon	---; ---; 62, 323	Shewell & Fredeen	1958
<i>congareenense</i> Dyar & Shannon	---; May-July; 62 Attached to vegetation in slow-flowing permanent streams; Mar.-June; 323	Davies et al.	1962
<i>corbis</i> Twinn	Lowland lake-outlets and semi-upland streams, submerged wood and underside of loose stones; May-Sept.; 5°	Sommerman et al.	1955
	Bog and marsh drainage streams in level and mountainous country along coast up to an elevation of 2,000 feet; ---; 5	Jenkins	1948
	Attached to rock faces and stones in and below cascades and waterfalls, backwaters beneath waterfall; border vegetation and water above waterfalls, June; 62°	Wolfe & Peterson	1959
	Fast running river with stony bottom, on submerged stems of dogwood; ---; 62	Twinn	1936
	---; spring; 62	Peterson & Wolfe	1958
	---; July & Aug.; 62	Hocking & Richards	1952
	Stems of dogwood close to the bank of a river in rapids below a waterfall, cold streams; rare, May-June; 323	Stone & Jammback	1955

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SIMULIUM costatum</i> Friedericks	---; active June and July; 62 ---; ---; 323	Davies	1952
<i>croatoni</i> Nicholson & Mickel	Temporary and permanent streams; May-July; 62 Temporary and young streams; June-July; 323	Goulding & Deonier et al.	1956 1962
<i>duoense</i> Dyar & Shannon	---; ---; 323	Stone	1964
<i>dannosum</i> Theobald	---; ---; 323	Wu	1931
<i>decemarticulatum</i> Twinn	Shallow, temporary streams with rock bottom. drainage ditch; ---; 62	Twinn	1936
<i>decorum</i> Walker	Under surfaces of stones exposed to direct sunshine. also in deflecting surfaces and trailing vegetation in partially shaded areas; July-Sept.; 5°	Sommerman et al.	1955
	Lake outlets and bog drainage streams at elevations Jenkins below 1,000 feet, at the base of small waterfalls, at the end of culverts on rocks; June; 5	Jenkins	1948
	---; ---; 5, 62, 323 (Outflows from naturally and artificially impounded waters, occur in immense numbers on dam faces and on the sticks of beaver dams)	Stone	1964
	Irrigation drop structures, head gates, rocks and on vegetation down stream, canals and drainage; peak Sept.; 62°	Fredeen & Shemanchuk	1960
	Lake side faces of sluice-gate boards of dams at lake outlets on dams; ---; 62	Wolfe & Peterson	1959
	Rivers; common, Apr.-Aug.; 62	Fredeen	1964
	On dams, at lake outlets, below large pools; common, May-Oct.; 323°	Stone & Jawaback	1955
<i>decorum</i> <i>karai</i> Dyar & Shannon	---; ---; 5 Small permanent stream with rocky ripples, flowing through well wooded gorge; ---; 62 ---; experimental transmission of <i>Bacterium</i> <i>tularensis</i> ; 323	Hearle Parker	1932 1934

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SIMULIUM</i> <i>taeniatifrons</i> Enderlein	---; ---; 323	Vargas	1945
<i>tenuicalyx</i> Enderlein	---; ---; 323	Vargas	1945
<i>tescorum</i> Stone & Boreham	In small spring-fed streams of moderate flow, attached to rocks, trailing grasses and roots; active in the late afternoon, above the ground over small trees near the streams, anthropophilic and vicious biters, abundant; 323°	Stone & Boreham	1965
<i>transiens</i> Rubzov	Streams and rivers; rare; 62	Fredeen	1958
<i>trivittatum</i> Malloch	---; ---; 323	Stone	1965
<i>tuberosum</i> (Lundstroem)	Lake outlet shallow, streams with loose, rocky bottoms, directly exposed to the sun, surfaces of stones, on logs and trailing vegetation; attracted to humans and their crawling can be annoying, May-Sept.; 5°	Sommerman et al.	1955
	---; ---; 5, 126. ---; May-Sept.; 323 (A wide variety of permanent streams, bites man)	Stone	1964
	Permanent streams and rivers, calm water on lake shore among stones just above lake outlet; June- Sept.; 62°	Wolfe & Peterson	1959
	Irrigation canals, rivers, attached to rocks and vegetation; ---; 62	Fredeen & Shemanchuk	1960
	Permanent streams, anthropophilic; annoying; 323°	Stone & Jamback	1955
	Attached to rocks, banks of small stream and rivers; ---; 323	Peterson	1960
<i>turnale</i> Twinn	---; ---; 323	Twinn	1938
<i>unicum</i> Twinn	---; ---; 323	Vargas	1945
<i>vandalicum</i> Dyar & Shannon	---; ---; 323	Vargas	1945

TABLE 1 - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SIMULIUM</i>			
<i>venator</i> Dyar & Shannon	---; ---; 323	Stone	1965
<i>venustoides</i> Hart	---; ---; 323	Forbes	1912
<i>venustum</i> Say	Semi-upland and lowland streams, submerged sedges, trailing vegetation, grass blades, stones and logs attachment; crawling and biting nuisance, Sept.; 5°  Lake outlets and drains from marshes and bogs with alkalinity at altitudes from sea level to 2,000 feet; abundant, May-Aug.; 5	Sommerman et al.	1955
	---; ---; 5, 126. ---: April-June; 323 (Commonest species in small, permanent, semi-permanent and larger streams, feed on man)	Jenkins	1948
	All types and bodies of running water, permanent and temporary rivers, streams, rills, immature stages on rocks, logs, aquatic plants, drainage ditches; active May-Oct., peak June-July; 62°	Twinn	1936
	Streams, stones and logs at waterline, upper surfaces and borders of trailing vegetation in calm waters above lake outlets, torrents to slow-moving creeks and ditches, rill sections and small rapids at lake outlets and pools, aquatic grasses, floating blade of grass above rill sections; abundant; 62	Wolfe & Peterson	1959
	---; abundant and troublesome at high elevations; 62°	Hearle	1929
	Submerged grass blades in small streams; active from 3:00 p.m. to dusk, worst attack occur in early spring to fall, peak Sept.; 323°	Jobbins-Pomeroy	1916
	On leaves of aquatic plants, stones, logs and other objects in the streams at or near water level; active from 5:00 to 8:00 p.m.; 323	Wu	1931
	Trees and other vegetation along a creek, from pastures, vacant lots, gardens and house windows; April-Oct.; 323	Forbes	1912
	---; ---; 323 (Bites in greatest numbers in or near Metcalf woods and brush, abundant along banks of trout streams, inject venom that causes general physiological reactions and occasionally pronounced illness, bites by day)	Metcalf	1932

TABLE I - BLACK FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SIMULIUM verecundum</i> Stone & Jamback	---; June, Oct.; 5. ---; April-Sept., Nov.; 323 Rivers and streams; common, May-Aug.; 62 Dam; ---; 62	Stone & Jamback Fredeen Wolfe & Peterson	1955 1964 1959
<i>virgatum</i> Coquilletti	---; ---; 62 ---; June, Aug.; 323	Hearle Stains & Knowlton	1929 1943
<i>virgatum canadensis</i> Hearle	Small, permanent and semi-permanent stream, swift running with rocky ripples and boulders; ---; 62	Hearle	1932
<i>vittatum</i> Zetterstedt	Semi-upland and lowland streams with loose rocks on the bottom and attached to all surfaces of the stones, also from logs and trailing vegetation; attracted and annoying to man, May-Sept., peak July and Aug.; 5° Lake outlets with beds composed of rocks, logs, sticks and occasionally vegetation and sand with alkalinity under 1,000 feet elevation; abundant; 5 ---; ---; 5, 126. ---; May, July-Sept., Dec.; 323 (Any type of flowing water, adults swarm about man, entering eyes, ears, nose or mouth) ---; ---; 7	Sommerman et al. Jenkins Stone Stone	1955 1948 1964 1952
	Drainage stream, supply and irrigation canals, permanent flowing streams, among rocks, on aquatic and emergent vegetation, on debris and branches of willows dipping into fast-flowing water and all extremes of environment provided by irrigation; abundant and widely distributed; 62	Fredeen & Shemanchuk	1960
	Streams draining a warm lake or swamp water rich with suspended algae overwinters under the ice in small streams; abundant in summer; 62	Fredeen	1956
	River, submerged rocks in the rapids; in the open by the river and in the woods; 62	Twinn et al.	1948
	On submerged objects in streams of widely varying widths; April-Nov.; 62	Davies et al.	1962
	---; active and most troublesome in the evening; 62°	Hocking & Pickering	1954
	---; ---; 126°	Longstaff	1932

TABLE I - BLACK FLIES (conclusion)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY: DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SIMULIUM</i> <i>vittatum</i> Zetterstedt (cont.)	Below dams, lake outlets, below large pools; Feb., April-Nov.; 323 <sup>a</sup>	Stone & Jammback	1955
	On grass blades on small stones of a small stream and bridge piles in the rivers; ---; 323	Jubbins- Pomeroy	1916
	Shore lines; ---; 323	Forbes	1912
	Warm streams; ---; 323	O'Kane	1926
<i>wyomingense</i> Stone & DeFoliart	---; ---; 323	Stone	1965
<i>THAUMALEA</i> <i>americana</i> Bezzi	---; ---; 62. ---; March; 323 (Wet rocks of cold streams usually in the shade and always where the surface is covered with a thin fil of water not deep enough to submerge them)	Stone	1964
<i>TITANOPTERYX</i> <i>meridionalis</i> (Riley)	---; ---; 323	Enderlein	1935
<i>THINNIA</i> <i>tibblesi</i> Stone & Jammback	Cold, spring-fed streams in birch-maple woods; ---; 52	Davies et al.	1962
	---; June-Sept.; 62. ---; April; 323	Stone & Jammback	1955
	Small permanent brook; ---; 323	Stone	1954
<i>WILHELMIA</i> <i>vittata</i> Zetterstedt	---; ---; 125, 323	Enderlein	1925

#### C. SAND FLIES

The sand fly entries include a few species of Psychodinae which do not bite but may be pests of man, often causing allergic reactions. Little is to be found in the literature on the biologies and disease transmissions of these species. Most of the data are distributional records.

The table includes 13 species or subspecies, most of which are in the large genus *Phlebotomus*.

TABLE I - SAND FLIES

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PHLEBOTOMUS</i> <i>anthophorus</i> Addis	---; ---; 323	Quate	1965
<i>aquilonius</i> Fairchild & Harwood	---; ---; 323	Quate	1965
<i>californicus</i> Fairchild & Hertig	---; ---; 323	Quate	1965
<i>diabolicus</i> Hall	---; ---; 323° ---; ---; 323	Packchanian Quate	1946 1965
<i>limai</i> Fonseca	---; ---; 323 ---; ---; 323°	Packchanian Thurman et al.	1946 1949
<i>oppidans</i> Dampf	---; ---; 323	Quate	1965
<i>shannoni</i> Dyar	---; found in swamp, partially shaded with vegetation, rich in organic matter and brackish water, bites man below the waistline, active at night; 323° ---; ---; 323	Thurman et al.	1949
<i>steekerti</i> Magnabeira & Calindo	---; burrows of ground squirrels; 323	Packchanian	1946
<i>texanus</i> Dampf	—; ant nest; 323	Packchanian	1946
<i>vexator</i> Coquillett	---; burrows of ground squirrels; 323	Packchanian	1946
<i>vexator</i> <i>occidentis</i> Fairchild & Hertig	---; ---; 323	Quate	1965
<i>vexator</i> <i>vexator</i> Coquillett	---; ---; 323	Quate	1965
<i>PSYCHODA</i> <i>alternata</i> Say	Shallow water, highly moist organic solids such as sewage filters, exposed sewage, plumbing traps, water pipes, wash-water overflow, compost, bird's nests, human sputum; weak fliers, rest in shaded areas or on foliage during the day, attracted to lights, enter houses; 323	Scott	1964

#### D. MIDGES

The midges include representatives from the family Ceratopogonidae. In some areas the biting species, especially *Culicoides*, are called "sand flies". Little is known of the biology of individual species; however, the larvae are known to occur either in water or in moist terrestrial environments. Although quite important as pests, these biting midges are vectors for several disease organisms in other countries. No disease transmission is recorded for America North of Mexico.

The table includes 122 species or subspecies, most of which are in the large genus *Culicoides*.

TABLE 1 - MIDGE

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULICOIDES</i>			
<i>alacha</i> Jannback & Wirth	---; ---; 323	Wirth	1965
<i>alaskensis</i> Wirth	---; July-Aug.; 5	Sailer et al.	1956

	---; in light trap; 323	James	1943
<i>bermudensis</i> Williams	Salt marsh sod, saline water, salt water pool margins, salt water well overflow area; April, May, Aug.; 323	Jannback	1965
<i>bickleyi</i> Wirth & Hubert	---; ---; 62. Swamp margin, sphagnum bog, stream margin, soft mud below water, surface in small woodland stream, decaying hay, grass roots and humus at swamp sites and thick sphagnum of margins of swamp; March, May-July; 323°	Jannback	1965
<i>biguttatus</i> Coquillett	Small bog near a stream and area open and unshaded; Jenkins July; 5	Jannback	1948
	---; ---; 62. Lakes, pools, streams, moist leaf depressions, moist sand, mud, decaying leaves, semi-permanent woodland pool, cedar bog, grassy marsh sites, spruce and hemlock with black mud beneath, grass, grass roots, humus and clay soil; light traps, April-Oct.; 323	Jannback	1965

TABLE 1 - MIDGEES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULICOIDES</i> <i>biguttatus</i> Coquillett (cont.)	Pitcher plants, tree holes and rock holes; in houses, attracted to lights, active after dark to dawn, biting peak 9:00 to 11:00 at night; 323°	Metcalf	1932
<i>bilantoni</i> Vargas & Wirth	---; ---; 323	Wirth	1965
<i>boringueni</i> Fox & Hoffman	Tree holes; May, Oct.; 323°	Wirth Buttimer	1956
<i>bottimeri</i> Wirth	Pond margin; March, Oct.; 323	Wirth & Bottimer	1956
<i>brookmani</i> Wirth	---; ---; 323	Wirth	1965
<i>butleri</i> Wirth & Hubert	---; ---; 323	Wirth	1965
<i>cacticola</i> Wirth & Hubert	---; ---; 323	Wirth	1965
<i>canithorax</i> Hoffman	---; in light trap; 323° ---; coastal area; 323	Foote & Pratt	1954
<i>cavaticus</i> Wirth & Jones	---; ---; 323	Wirth	1965
<i>chiopterus</i> (Meigen)	---; ---; 5, 62. Moist straw, moist polluted soil; Jamback light traps, May-Oct.; 323		1965
<i>cockerellii</i> (Coquillett)	---; ---; 5, 62. ---; June-Aug.; 323 ---; light trap; 323	Wirth	1952
<i>cockerellii</i> <i>saltonensis</i> Wirth	---; ---; 323	Foote & Pratt	1954
<i>cockerellii</i> var. <i>tristisculus</i> Hoffman	---; ---; 5° ---; ---; 323	Sailer et al.	1956
		Vargas	1949

TABLE I - MIDGE<sup>3</sup> (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULICCIDES</i> <i>crepuscularis</i> Malloch	---; ---; 62. Messy bank of stream inlet, grassy stream margins, muddy brook, ivy, grassy puddle, cedar bog stream, swamp, grass roots, humus, hoofprints, swamp lagoon margin, creek margin, highly saline to fresh water, muddy, sandy pond margins, puddles at water tank and septic tank; serious pest of man, spring and fall, March, May-Sept.; 323°	Jamnback	1965
	---; Feb., October; 323	Wirth & Bottimer	1965
<i>daedalus</i> Macfie	---; ---; 323	Wirth	1965
<i>debilipalpus</i> Lutz	---; ---; 323	Wirth	1965
<i>denningi</i> Foote & Pratt	---; ---; 62, 323	Wirth	1965
<i>denticulatus</i> Wirth & Hubert	---; ---; 62. River pool margin, mud, decayed leaves, leaf depression, open margin under tree roots, dead sphagnum and soft mud, sand and mud margin, near marsh; May-June; 323	Jamnback	1965
<i>dickeri</i> Jones	---; ---; 62	Wirth	1965
	---; light traps, June-July; 323	Jamnback	1965
<i>dovei</i> Hall	Shaded wet soil, ditches, near barriers, in depressions of salt marshes; ---; 323	Hull et al.	1934
<i>dowlesi</i> Wirth & Hubert	---; ---; 62. Bog; June-Aug.; 323	Jamnback	1965
<i>floridensis</i> Seck	---; ---; 323	Wirth	1965
<i>flukei</i> Jones	Tree hole, pitcher plant; May-July; 323	Jamnback	1965
<i>footei</i> Wirth & Jones	---; ---; 62, 323	Wirth	1965
<i>furens</i> (Paey)	Drainage ditches between high and low tide where soil is covered with soft, wet sediment, low areas saturated with shallow water or frequent tidal flooding. shaded areas, edges of bays and drainage ditches with the plant cover <i>Spartina alterniflora</i> ; June-Aug., peak July; 323	Jamnback	1965
	---; light traps; 323°	Fox	1946

TABLE 1 - MIDGE'S (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ULICOIDES</i> <i>furusoides</i> Williams	Near marsh, sphagnum mat at the edge of pond; June-July; 323	Jamnback	1965
<i>gigas</i> Root & Hoffman	---; ---; 62	Wirth	1965
<i>guttipennis</i> (Coquillett)	Dirty water in tree holes, in stumps of poplar trees, predaceous; enter houses, attracted to light, arrive from dark to dawn, July; 323°	Metcalf	1932
	Moist or wet tree holes; light traps, Jan., April-Oct.; 323	Jamnback	1965
<i>haematopodus</i> Malloch	---; light trap, June-July; 62. Margins of streams, ponds, pools with moist or wet sand or decaying leaf mold, septic tank, stream margins, muddy sand bar in stream, river-side pool, pond margin, swamp; ---; 323	Jamnback	1965
	---; light trap, May-Sept.; 323	James	1943
	---; Feb., Nov.; 323°	Wirth & Bottimer	1956
<i>hieroglyphicus</i> Malloch	---; light trap, May-Sept.; 323	James	1943
	---; March; 323	Wirth & Bottimer	1956
<i>hiranoi</i> Khalaf	---; ---; 5, 323	Wirth	1965
<i>hirtulus</i> Coquillett	---; ---; 5, 323	Wirth	1965
<i>holensis</i> (Melander & Brues)	---; ---; 62, 323 (Salt marsh pest)	Wirth	1965
	Salt marshes with much vegetation, soft mud on top of sod, margins of bays and drainage ditches with vegetation; March-Aug.; 323°	Jamnback	1965
<i>inanollae</i> Fox & Hoffman	---; ---; 323	Foote & Pratt	1954
<i>insignis</i> Lutz	---; ---; 323	Wirth	1965
<i>jamaicensis</i> Edwards	---; Feb., October; 323	Wirth & Bottimer	1956

TABLE 1 - MIDGEES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CULICOIDES</i>			
<i>jamesi</i> Fox	---; ---; 62, 323	Wirth	1965
<i>jamnbacki</i> Wirth & Hubert	---; ---; 62. Woodland sites including seeps, stream margins, temporary pools, swamps, marshes with soft mud either bare or covered by growth of sphagnum or grass, decaying leaves; May-July; 323	Jamnback	1965
<i>jonesi</i> Wirth & Hubert	---; ---; 323	Wirth	1965
<i>khalafi</i> Beck	---; ---; 323 (Salt marsh pest)	Wirth	1965
<i>knowltoni</i> Beck	---; ---; 323	Wirth	1965
<i>loughnani</i> Edwards	---; ---; 323	Wirth	1965
<i>lugdani</i> Jones & Wirth	---; ---; 323	Wirth	1965
<i>luteovenus</i> Root	---; ---; 5, 323	Root & Hoffman	1937
<i>melleus</i> (Coquillett)	Inter-tidal sand in protected bays or inlets; serious pest along coast, March-July; 323°	Jamnback	1965
	---; ---; 323	Wirth	1965
<i>minutissimus</i> Zetterstedt	---; ---; 126	Wirth	1965
<i>mississippiensis</i> Hoffman	---; salt marsh pest; 323°	Wirth	1965
<i>mohave</i> Wirth	---; ---; 323	Wirth	1965
<i>moroensis</i> Wirth	Seepage areas at lake margins; ---; 323	Wirth	1952
<i>mulrennani</i> Beck	---; ---; 323	Wirth	1965
<i>multipunctatus</i> Malloch	Mud at pond margins; Feb., Nov.; 323 ---; at light; 323	Wirth & Bottimer Malloch	1955 1915

TABLE I - MIDGEES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE

#### E. HORSE FLIES

The entries for horse flies (Tabanidae) include very little biology. Most of the literature on this large and important group is concerned with taxonomy, a lesser amount on distribution, and no disease transmission was recorded.

The synonymy, both at the genus and the species level, is very complex. Several specialists are currently striving to straighten out some of these problems.

In the table are listed 554 species or subspecies, but it is certain that many of these are not valid names.

TABLE I - HORSE FLIES

SPECIES	BREEDING HABITS, ADULT ACTIVITY, DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>Atylomyia</i> <i>magicalis</i> (Stone)	---; ---; 323	Philip	1947
<i>psamophila</i> (Osten Sacken)	---; ---; 323	Philip	1947
<i>AGAISTROGERUS</i> <i>finitimus</i> (Stone)	---; ---; 323	Philip	1965
<i>megerlei</i> (Wiedemann)	---; ---; 323	Philip	1965
<i>ANACIMAS</i> <i>doigei</i> (Whitney)	---; April-May; 323	Stone	1938
<i>geropogon</i> Philip	---; ---; 323	Philip	1965
<i>lindellatus</i> Enderlein	---; ---; 323	Philip	1965
<i>AP. COLISTES</i> <i>acutes</i> Philip & Steffan	---; ---; 323	Philip	1965
<i>affinis</i> Philip	---; ---; 323	Philip	1949
<i>aitskeni</i> Philip	---; ---; 323	Philip	1965
<i>albipilosus</i> Brennan	---; ---; 323	Philip	1965
<i>ater</i> Brennan	---; ---; 323	Philip	1965
<i>colei</i> Philip	--; ---; 323	Philip	1965
<i>comastes</i> Williston	---; ---; 62, 323	Philip	1965
<i>comastes</i> <i>comastes</i> Williston	---; April-July; 323	Middlekauff	1950
<i>comastes</i> <i>fulvipes</i> Philip	---; ---; 323	Philip	1965

<i>amazon</i> <i>amazon</i> Daecke	---; ---; 323	Philip	1965
<i>amazon</i> <i>hubbelli</i> Philip	---; ---; 323	Philip	1965

TABLE 1 - HORSE FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CHrysops asbestos</i> Philip	---; ---; 62 ---; June, July; 323	Philip Middlekauff	1949 1950
<i>atlanticus</i> Pechuman	In very wet situations, often under water, in salt marshes and brackish pools; pest in the vicinity of salt marshes, common; 323°	Pechuman	1957
	---; July-Aug.; 323	Bickle	1954
<i>auritimba</i> (Stone)	---; ---; 323	Philip	1947
<i>bassetti</i> Brennan	---; on vegetation, July-August; 3°	MacCready	1940
<i>bishoppi</i> Brennan	---; May-July; 323	Middlekauff	1950
<i>bishoppi</i> <i>gilvus</i> Philip	---; ---; 323	Philip	1965
<i>bistellatus</i> Daecke	---; June; 323	Fattig	1946
<i>brimleyi</i> Hine	---; attracted to man; 323 ---; March-May; 323 ---; June-July; 323	MacCready Fattig Pechuman	1940 1946 1957
<i>brunneus</i> Hine	Marshes along the lakeshore; attacks with a loud buzzing noise; 62° ---; June-Aug.; 62 Marshes; ---; 323 ---; April-July; 323 ---; August; 323°	Pechuman Pechuman et al. Osburn Fattig MacCready	1957 1961 1913 1946 1940
<i>callidula</i> Philip	Temporary ponds, marshes with indefinite shoreline, running water; most abundant in the open woodland, less common in other areas, May-Aug.; 323	Knutson et al.	1954
<i>callidus</i> Osten Sacken	---; June-Aug., 62 ---; ---; 62 (Carnivorous, muddy places, in swamps and along small streams, annoys man in mid-summer, in woods)	Pechuman et al. Winn & Beaulieu	1961 1915

TABLE I - HORSE FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CHrysops</i> <i>callidus</i> Osten Sacken (cont.)	Stagnant mud on the edge of ponds, creeks, on vegetation; active and aggressive and causes annoyance to man, very common, May-Oct., peak June-July; 323	Pechuman	1957
	Wet organic matter at margins of brackish pools, heavy wet clay soil, floating mat of vegetation, sand tidal flat; bites until dark; 323°	MacCreary	1940
	Temporary pond, marshes with indefinite shoreline, running water; ---; 323	Philip	1931
	Emergent aquatic vegetation; March; 323	Schwardt	1936
	---; open pasture and wooded hillside, peak activity May and June; 323	Schwardt & Hall	1930
	---; April; 323	Jones & Bradley	1924
<i>callidus</i> <i>confusus</i> Kröber	---; ---; 62, 323	Philip	1965
<i>carbonarius</i> Walker	---; ---; 5	Brennan	1935
	---; May-July; 62	Pechuman et al.	1961
	---; ---; 62 (Carnivorous, muddy places, in swamps and along small streams, annoys man in woods)	Winn & Beaulieu	1915
	Mud and plant debris on the edges of ponds and streams, often under several inches of water; common, May-July, peak June; 323	Pechuman	1957
	Lakes of well-defined shoreline; Aug.; 323	Philip	1931
	Mud among dead leaves and sticks often under water; ---; 323	Stone	1930
	---; ---; 323°	Bickle	1954
<i>carbonarius</i> <i>nubialex</i> Philip	---; May-July; 62	Pechuman et al.	1961
	---; ---; 323	Philip	1965
<i>oester</i> Osten Sacken	---; June, July; 62 (Carnivorous, muddy places, in swamps and along small streams, annoys man in mid-summer, in woods)	Winn & Beaulieu	1915

TABLE 1 - HORSE FLIES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CHrysops celer</i> Osten Sacken (cont.)	Muddy banks of ponds and streams, on emergent vegetation over about eight inches of water; abundant and most annoying to man, May-Aug., peak June; 323°	Pechuman	1957
	Sluggish woodland streams along decaying vegetation; ---; 323	Stone	1939
	---; April; 323	Prost & Pecnuman	1958
<i>celer</i> <i>nigroptera</i> Fairchild	---; ---; 323	Fairchild	1937
<i>celeris</i> Osten Sacken	---; ---; 62, 323	Philip	1947
<i>celeris</i> <i>nigroptera</i> Fairchild	---; ---; 323	Philip	1947
<i>cincticornis</i> Walker	---; May-Aug.; 62	Pechuman et al.	1961
<i>cincticornis</i> <i>cincticornis</i> Walker	---; ---; 62, 323	Philip	1965
<i>cincticornis</i> <i>nigropterus</i> Fairchild	---; ---; 323	Philip	1965

<i>noeckei</i> Osten Sacken	Temporary pond and lakeshores; in and about woods; 323  Leaves of trees overhanging rivers and streams; June-Aug.; 62  Wet mud, under water along ponds and streams, amongst leaves of trees overhanging streams; bites man late in the afternoon until after dark; 323°	Philip  Pechuman et al.  Pechuman	1931  1961  1957

TABLE 1 - HORSE FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENT)	AUTHOR	DATE
<i>CHrysops</i> <i>moechus</i> Osten Sacken (cont.)	At margin of artificial lake and muddy backwater; ---; 323 Lakes; ---; 323 ---; May-August; 323	Stone Philip McAtee & Walcott	1930 1931 1918
<i>moerens</i> Walker	---; ---; 62° On leaves, aquatic plants oftentimes standing in rather deep waters as much as 20 rods from shore, around edges of grassy areas; common in marshes, June-Sept.; 323	Cameron Hine	1926 1906
<i>montanus</i> Osten Sacken	---; May; 62 ---; June-Aug.; 62 Sand on the edges of ponds and lakes; abundant and aggressive; 323 Lakeshore; woods, June-Sept.; 323 ---; vicinity of lakes and ponds; 323	Winn & Beauvieu Pechuman et al. Pechuman	1932 1961 1957
	---; May; 323 ---; ---; 323°	Philip Fattig Frost & Pechuman	1931 1946 1958
<i>montanus</i> <i>pertinax</i> Philip	---; ---; 323	Philip	1965
<i>niger</i> Macquart	---; May-July; 62 ---; ---; 62 (Carnivorous, muddy places, in swamps and along small streams, annoys man in mid-summer in woods) Wet mud usually at unshaded places, boggy meadow-fed by springs, margin of swamp, creek bank; May-Aug.; 323° Marshes, running water; ---; 323 ---; wooded pasture, peak in June; 323	Pechuman et al. Winn & Beauvieu Stone Philip Schwardz & Hall	1961 1915 1930 1931 1930

TABLE 1 - HORSE FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CHrysops</i> <i>niger</i> <i>taylori</i> Phi'ip	---; ---; 323	Philip	1965
<i>nigra</i> Macquart	---; ---; 62. ---; taken at light; 323	Frost & Pechuman	1958
	Stagnant mud and plant debris on the edge of a pool, banks of small brook, wet soil under trees, margin of brackish water and in sandy areas swept by daily tides; sometimes abundant and annoying to man, May-Sept.; 323°	Pechuman	1957
	Sandy tidal region with much vegetation, margin of slightly brackish pool; occasionally in buildings; 323	MacCreary	1940
	---; April; 323	Fattig	1946
<i>nigribimbo</i> Whitney	---; May-Aug.; 323	Brennan	1935
	---; rare; 323	Pechuman	1957
<i>nigripes</i> Zetterstedt	---; ---; 5, 323	Philip	1965
	---; July-Aug.; 62 (Woodland, bites man freely)	Twinn et al.	1948
<i>noctifer</i> Osten Sacken	---; Apr.-Aug.; 62	Hadwen	1914
	---; experimental transmission of <i>Bacterium tularensis</i> ; 323	Parker	1934
	---; mountain areas; 323	Rowe & Knowlton	1936
<i>noctifex</i> <i>noctifera</i> Osten Sacken	---; May-July; 323	Middlekauff	1950
<i>noctifera</i> <i>peruviana</i> Williston	---; ---; 62. ---; May-July; 323	Middlekauff	1950
<i>obsoletus</i> Wiedemann	---; July; 62 (Carnivorous, muddy places, in swamps and along small streams, annoys man in mid-summer in woods)	Winn & Beaulieu	1915
	Wet organic matter, soft mud in marsh; on vegetations, marshes and inland; 323°	MacCreary	1940
	Mud beside shallow, slowly-flowing brook; May-October, peak in June; 323	Jones & Bradley	1924
	---; wooded pastures and wooded hillside, peak June and July; 323	Schwardt & Hall	1930
	---; greatest abundance in summer months; 323	Jones & Bradley	1923

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CHrysops</i>			
<i>proclivis</i>			
<i>atricornis</i> Bigot	---; ---; 62, 323	Philip	1965
<i>proclivis</i> var. <i>piceus</i> Philip	---; July; 323	Philip	1935
<i>proclivis</i> <i>proclivic</i> Osten Sacken	---; ---; 62. ---; June-Aug.; 323	Middlekauff	1950
<i>proclivus</i> Osten Sacken	---; common in coniferous woods; 62 ---; May-July; 62 ---; June-Aug.; 323	Cameron Hadwen Brennan	1926 1914 1935
<i>proclivus</i> <i>imfurcatus</i> Philip	---; ---; 62. ---; June and July; 323 ---; May and Aug.; 323	Middlekauff Philip	1950 1935
<i>proclivus</i> <i>vara</i> Osten Sacken	---; ---; 62, 323	Philip	1947
<i>pudicus</i> Osten Sacken	---; common along the coast, April-Sept., peak June-July; 323	Pechuman	1957
<i>reicherti</i> Fairchild	---; ---; 323	Fairchild	1937
<i>robusta</i> Brennan	---; ---; 323	Philip	1947
<i>sackeni</i> Hine	---; June-July; 62 ---; ---; 62 (Carnivorous, muddy places in swamps and along small streams, annoys man in mid-summer in woods) In mud on the edges of permanent and temporary ponds and in organic material on the edge of salt marshes; June-Aug.; 323°	Pechuman et al. Winn & Beaulieu	1961 1915 1957
	Temporary pond, marshes with indefinite shore line, pasture; ---; 323	Philip	1931
<i>separatus</i> Hine	---; April; 323	Jones & Bradley	1924

TABLE 1 - HORSE FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CHrysops</i> <i>sequax</i> Williston	---; May; 323 ---; June-Aug.; 323 ---; Sept.; 323	Fattig Schwardt Brennan	1946 1936 1935
<i>sequax</i> <i>tau</i> Philip	---; ---; 323	Philip	1965
<i>shermani</i> Hine	---; June-July; 62 ---; aggressive and bites with a loud buzzing sound, June-Sept., peak June-July; 323°	Pechuman et al.	1961 1957
<i>sordidus</i> Osten Sacken	---; June-July; 62 ---; June-August; 323 ---; ---; 323°	Pechuman et al. Pechuman Blickle	1961 1957 1954
<i>striatus</i> Osten Sacken	---; June-August; 62 Mud on the edge of ponds and in sandy soil swirled by tides, common in the cattail swamps; ---; 323	Winn & Beaulieu Pechuman	1932 1957
	Along reedy shoreline of pond; ---; 323	Philip	1931
	---; June-Sept.; 323	Brennan	1935
	---; ---; 323°	Blickle	1954
<i>sordidus</i> Osten Sacken	---; ---; 62 ---; June-Aug.; 323	Philip Middlekauff	1965 1950
<i>sordidus</i> <i>piceus</i> Philip	---; ---; 323	Philip	1965
<i>tibialis</i> Philip & Jones	---; ---; 323	Philip	1965
<i>vitima</i> Whitney	---; July-Aug.; 323	Brennan	1935
<i>uniannulatus</i> Macquart	---; June-Aug.; 62 Mud and plant debris from the edges of ponds and streams; pest of man during its flight season, peak June-July; 323° ---; May-Sept.; 323	Pechuman et al. Pechuman Blickle	1961 1957 1954

TABLE 1 - HORSE FLIES (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CHrysops</i> <i>upsilon</i> Philip	---; ---; 323	Philip	1965
<i>venus</i> Philip	---; June-Aug.; 62	Pechuman et al.	1961
	---; ---; 323	Philip	1965
<i>virgulatus</i> Bellardi	---; ---; 323	Philip	1965
<i>vitripennis</i> Shannon	---; bogs, grass and vegetation a few inches above water surface; 323	McAttee & Walton	1918
<i>vittatus</i> Wiedemann	---; June-Sept.; 62	Pechuman et al.	1961
	---; ---; 62 (Carnivorous, muddy places, in swamps and along small streams, annoys man in mid-summer in woods)	Winn & Beaulieu	1915
	Wet soil and plant debris from edges of streams, ponds and lakes, also from saturated soil under trees; abundant in low-lying wooded areas, peak July-Aug.; 323°	Pechuman	1957
	Temporary pond, running water; ---; 323	Philip	1931
	---; April-October, peak in June and September; 323	Jones & Bradley	1924
<i>vittata</i> <i>boridana</i> Johnson	---; ---; 323	Fairchild	1937
<i>vittatus</i> <i>floridanus</i> Johnson	---; ---; 323	Philip	1965
<i>wiedemanni</i> Kröber	---; ---; 62. Muddy banks of streams; woodland; 323	Stone	1930
	Wet soil and plant debris on the edges of both sluggish and swift streams, in mud at the edge of ponds and lakes and in marshes; partial to wooded areas, quiet and attack man preferably behind the ear and on the cheeks, May-Sept., peak July-Aug.; 323°	Pechuman	1957
	Banks of stagnant or spring-fed ponds and small slow streams; ---; 323	Schwardt	1936
	Running water, pastures; ---; 323	Philip	1931
	---; strongly attracted to light; 323	Frost & Pechuman	1958

#### F. BITING FLIES

Only 4 species of biting flies are recorded. A report of intestinal myiasis caused by *Stomoxys calcitrans* is included.

TABLE I - BITING FLIES

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>STOMOXYS</i> <i>calcaratus</i> (Linnaeus)	---; ---; 5, 62. ---; active June-Sept., peak Aug.; 323 (Pestiferous to man, vector of acute epidemic poliomyelitis)	Brues	1913
	---; abundant in Gulf beaches, active and persistent biters in the evening, July; 62°	Brues	1947
	---; ---; 323*	Canavan	1936
	---; ---; 323°	Simmons & Dove	1942
<i>SYMPHOROMYIA</i> <i>atrides</i> Bigot	---; ---; 5°	Frohne	1956
	---; inflicts a most painful bite, drawing blood profusely and causing some swelling of the bitten spot, persistent, bites on sunny days and in the open; 62°, 323°	Ross	1940
<i>hirta</i> Bigot	---; occasionally bite man savagely, bite cause irritation, swelling and itching, bites persistently; 323°	Mills	1943
<i>pachyceras</i> Williston	---; ---; 62, 323 (Aggressive biter)	Knab	1915

TABLE 2 - SUMMARY OF DISEASES OR DISEASE ORGANISMS TRANSMITTED BY  
BITING FLIES

SPECIES	DISEASE ORGANISM					DISTRIBUTION
	VIRUS &	RICKETTSIA	PROTOZOA	HELMINTHS	OTHER	
<i>STOMOXYS</i> <i>calcitrans</i> (Linnaeus)					Intestinal myiasis	323

#### G. NON-BITING FLIES

The entries for non-biting flies include representatives of several groups. Of course, the most important species in this category are those that feed as larvae on the tissues of living animals.

The table includes 45 species or subspecies.

TABLE 1 - NON-BITING FLIES

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>APIIOCHAETA</i> <i>feruginea</i> Brunetti	---; ---; 323 (Causes intestinal myiasis)	Spencer	1920
<i>CALLIPHORA</i> <i>vicina</i> Robineau-Desvoidy	---; ---; 323*	Scott	1962
<i>vomitoria</i> (Linnaeus)	---; ---; 5, 62, 323 (Causes gastrointestina' myiasis)	James	1947
<i>CHLITPOGA</i> <i>americana</i> (Cushing & Patton)	---, attacks fresh clean wounds; 323* (Causes traumatic myiasis of nose, mouth and sinuses, eyes, ears, genito-urinary and furuncular)	James	1947
<i>CEPHALOMYIA</i> <i>ovis</i> (Linnaeus)	---; ---; 351*	Hermes	1925
<i>COELIOMYIA</i> <i>americana</i> Cushing & Patton	---; bites late in the spring or early in the summer; 323*	Laake et al.	1936
<i>hominivora</i> Coquillett	---; ---; 323*	Dove	1937
<i>macellaria</i> Fabricius	---; ---; 323*	Laake et al.	1936
<i>CUTEREBRA</i> <i>buccata</i> (Fabricius)	---; ---; 323*	Bequaert	1946
<i>DROSOPHILA</i> <i>fumiferis</i> (Fabricius)	---; ---; 323*	Dove	1937
<i>ERISTALIS</i> <i>tenax</i> (Linnaeus)	---; ---; 323* (Fouï water, decaying vegetable matter and fruits)	Swartzwelder & Cali	1942
	---; ---; 351*	Dove	1937
<i>FANNIA</i> <i>cunicularis</i> Linnaeus	---; ---; 62*	Detwiler	1929
<i>scalaris</i> Fabricius	---; ---; 323*	Dove	1937
<i>GASTROPHILUS</i> <i>haemorrhoidalis</i> (Linnaeus)	---; ---; 62, 323 (Causes creeping myiasis, mostly on face and buttocks)	James	194?
	---; ---; 323*	Dove	1937

TABLE I - NON-BITING FLIES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>GASTROPHILUS intestinalis</i> (De Geer)	---; ---; 62*	Dove	1937
	---; ---; 62, 323 (Causes creeping subcutaneous myiasis and of the eyes)	James	1947
<i>HERMETIA illucens</i> (Linnaeus)	Hives of small bees, decaying fruits or vegetables, decaying animal matter including carcasses of men and dogs, privies, artificial containers; taken from feces of boy; 323	McIneney & Harwood	1935
	---; ---; 323*	Canavan	1936
<i>HIPPELATES ecclisor</i> (Townsend)	---; attracted to faces of children, nuisance, suspected vector of conjunctivitis, Feb.-Nov.; 323°	Womeldorf & Mortenson	1963
<i>dorsalis</i> Loew	---; attracted to man, especially to arms and hands, annoying; May-Nov., peak Oct.; 323°	Womeldorf & Mortenson	1963
<i>pusio</i> Loew	In human excrement; attracted to moist places, worst on warm humid days, from May-frost in autumn, vector of conjunctivitis and trachoma, mostly among young children; 323**	Bengtsson	1953
	---; attracted to men, April-Dec.; 323	Womeldorf & Mortenson	1963
<i>robertsi</i> Sabrosky	---; attracted to men, ubiquitous, Feb.-Oct., peak May; 323	Womeldorf & Mortenson	1963
<i>HYPODERMA bovis</i> (Linnaeus)	---; ---; 62, 323 (Causes creeping, furuncular and myiasis of eyes)	James	1947
<i>lineatum</i> (De Villers)	---; ---; 62. ---; parasitized by seven larvae, almost complete paralysis of the lower extremities resulted; 323* (Causes creeping, furuncular and myiasis of the eyes)	James	1947
<i>LUCILIA illustris</i> (Meigen)	---; myiasis in open wound in leg; 62*. ---; myiasis of ulcer on the side of head; 323*	James	1947
<i>sericata</i> (Meigen)	---; ---; 323 (Causes myiasis)	Knippling & Rainwater	1937
<i>METASELIA sciariae</i> (Loew)	---; ---; 323 (Causes traumatic myiasis of eyes and enteric myiasis)	James	1947
<i>MUSCA domestica</i> Linnaeus	Decaying animal or vegetable matter; common, carrier of typhoid fever; 62	Winn & Beaulieu	1919
	---; ---; 323*	Frison	1925

TABLE 1 - NON-BITING FLIES (continued)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>MUSCA</i> <i>domestica</i> Linnaeus (cont.)	---; ---; 323*	Dove	1937
	---; ---; 323 (Proved to be a carrier of typhoid fever, tuberculosis, dysentery, summer diarrhea of infants, tropical ulcers, Asiatic cholera)	Flint	1922
<i>MUSCA</i> <i>stabulans</i> (Fallén)	---; ---; 5, 62, 323 (Enter houses and may oviposit on foods, can cause enteric myiasis)	James	1947
	---; ---; 323*	Dove	1937
<i>OESTRUS</i> <i>ovis</i> Linnaeus	---; ---; 323*	Dove	1937
<i>PHAENICIA</i> <i>cuprina</i> (Wiedemann)	---; ---; 323*	Scott	1962
<i>sericata</i> (Meigen)	---; ---; 323*	Ryckman & Halstead	1952
<i>PINNOMIA</i> <i>regina</i> (Meigen)	---; ---; 5, 62, 323 (Traumatic, dermal myiasis)	James	1947
	---; ---; 323*	Dove	1937
<i>PIOPHILA</i> <i>cavifrons</i> (Linnaeus)	---; ---; 323*	Scott	1962
	---; ---; 351*	Dove	1937
<i>SARCOPHAGA</i> <i>barbara</i> Thomson	---; ---; 62, 323 (Traumatic myiasis, can cause extensive and deep lesions)	James	1947
<i>bullocki</i> Parker	---; ---; 62, 323* (Causes traumatic enteric myiasis)	James	1947
	---; ---; 323*	Dove	1937
	---; ---; 323*	Watson	1942
<i>cooleyi</i> Parker	---; ---; 62*	Twinn	1935
<i>crassipaialis</i> Macquart	---; ---; 323 (Occurs in traumatic dermal myiasis)	James	1947
<i>haemorrhoidalis</i> (Fallén)	---; ---; 62, 323 (Causes traumatic enteric and genito-urinary myiasis)	James	1947
	---; ---; 323*	Dove	1937

TABLE 1 - NON-BITING FLIES (conclusion)

SPECIES	BREEDING HABITS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>SARCOPHAGA</i> <i>lambens</i> Wiedemann	---; ---; 323 (Causes traumatic myiasis of ears)	James	194?
<i>pallinervis</i> Thomson	---; ---; 323*	Dove	1937
<i>plinthopyga</i> Wiedemann	---; ---; 62, 323 (Causes myiasis in old and festered sores or invade diseased body openings)	James	1947
<i>TITANOGRYPHA</i> <i>alata</i> (Aldrich)	---; ---; 323 (Causes traumatic myiasis of the nose, mouth and sinuses)	James	1947
<i>WOHLFAHRTIA</i> <i>meigeri</i> (Schiner)	---; ---; 323*	Mills et al.	1945
<i>opaca</i> (Coquilletti)	---; ---; 52*, 323*	James	194?
<i>vigil</i> (Walker)	---; ---; 5*, 62*, 323* (Causes furuncular subcutaneous or cutaneous myiasis) ---; May-Sept.; 62*	James	1947
	---; ---; 323*	Ford	1936
	---; ---; 323*	Gertson et al.	1933
	---; ---; 323°	James	1944

## H. FLEAS

The entries for fleas include almost no biology. Very few authors deal with flea biology. A few comment on fleas as vectors, but most of the literature deals with taxonomy and hosts. Only when the flea species is said to bite man is a host recorded here. The tables include 543 species or subspecies.

TABLE 1 - FLEAS

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ACTENOPHTHALMUS</i> <i>heiseri</i> (McCoy)	---; ---; 323	da Costa Lima & Hathaway	1946

## I. BUGS

The bugs or Hemiptera seem to be uncommon as pests of man in North America. The few entries comprise a variety of species, several of which are not obligated blood feeders. Only 30 species or subspecies are listed in this group.

TABLE I - BUGS

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>CIMEX lectularius</i> Linnaeus	---; in houses, July; 62 ---; ---; 62° ---; nocturnal, hiding during day in cracks of beds, behind wallpaper, objects hanging on walls; 323 ---; in houses, summer; 323 ---; ---; 323°	Ross Spencer Flint Harned & Allen Cooley	1916 1935 1922 1925 1915
<i>pilosellus</i> Horvath	---; occasionally in houses; 323°	Stearns	1937
<i>CIMEXOPIS nyctalis</i> List	---; in houses; 323	List	1925
<i>HAEMATOSIPHON iodorus</i> Duges	---; April-June; 323°	Anonymous	1944
<i>MISPEROCIMEX coloradensis</i> List	---; in houses; 323	List	1925
<i>LYCTOCORIS carpestris</i> (Fabricius)	---; ---; 351 (Occasionally in houses where it bites man)	Strong et al.	1926
<i>MELANOESTES abdominalis</i> Herrich-Schaeffer	---; ---; 351°	Strong et al.	1926
<i>pictipes</i> Herrich-Schaeffer	---; ---; 351°	Strong et al.	1926
<i>OECIACUS vicarius</i> Horvath	---; ---; 62° ---; in buildings; 323° ---; ---; 351°	Spencer Mills & Pletsch Strong et al.	1935 1941 1926
<i>PARATRIATOMA hirsuta</i> Barber	---; experimentally infected with <i>Trypanosoma cruzi</i> ; 323 ---; ---; 32,*	Usinger Wood	1944 1949

TABLE 1 - BUGS (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>PLAGIOGNATHUS</i> <i>obscurus</i> Uhler	---; ---; 351°	Strong et al.	1926
<i>RASAHIUS</i> <i>biguttatus</i> (Say)	---; in houses; 323	Strong et al.	1926
<i>thoracicus</i> Stål	---; in houses; 323	Strong et al.	1926
<i>TRIATOMA</i> <i>ambigua</i> Neiva	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Sullivan et al.	1949
<i>gerstaeckeri</i> (Stål)	In wood rat nest; houses; 323* ---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Wood Usinger	1941 1944
<i>heidemanni</i> Neiva	In wood rat nest; ---; 323* ---; bites cause fever and nausea; 323°	Wood Del Pente	1941 1930
	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Packchanian	1940
	---; in houses; 323	Readio	1927
<i>indictiva</i> Neiva	Rat nest; ---; 323*	Wood	1941
<i>lectularius</i> (Stål)	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Usinger	1944
<i>longipes</i> Barber	---; dens of wood rat, under houses, wood piles, in houses, May-June, bites man at night; 32° ---; restricted to rocky, hilly areas, naturally infected with <i>Trypanosoma cruzi</i> ; 323	Wehrle Wood	1939 1943
	---; ---; 323*	Wood	1949
<i>neotomae</i> Neiva	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Sullivan et al.	1949
<i>protracta</i> (Uhler)	Brush-pile wood rat houses; in houses, naturally and experimentally infected with <i>Trypanosoma cruzi</i> ; 323*	Wood	1949

TABLE 1 - BUGS (continued)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>TRIATOMA protracta</i> (Uhler) (cont.)	---; the bite causes pruritis all over, usually most severe on the scalp, palms and soles, or edema throughout the body, especially around eyes, tongue, larynx and trachea which often makes breathing and swallowing difficult, or welts and rashes, welts taking the form of large urticarial erythematous wheals or nausea, or fainting, pain, vomiting, fever, cramps and diarrhea, anywhere in the house, pockets of clothing, in shoes, under rugs, mostly in beds, bite mostly between 2400-0600, April-Nov., peak June-Sept.; 323*	Walsh & Jones	1962
	---; in woodrat dens throughout the year, bites man at night; 323°	Wehrli	1939
<i>protracta woodi</i> Usinger	Wood rat houses; naturally infected with <i>Trypanosoma cruzi</i> ; 323*	Wood	1949
	In cactus nest; in houses, from May-Sept.; 323	Wood	1941
<i>rubida</i> (Uhler)	In wood rat nest; in houses and tents, active in the early evening, May-Sept.; 323	Wood	1941
	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Wood	1943
	---; ---; 323*	Wood	1949
<i>rubida uhleri</i> Neiva	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Sullivan et al.	1949
<i>rubrofasciata</i> (De Geer)	---; ---; 323*	Pemberton	1943
<i>sanguisuga</i> (Le Conte)	---; cracks and insect tunnels in dead wood inside hollow oak trees or stumps, human habitations, in beds, outdoor latrines, naturally infected with <i>Trypanosoma cruzi</i> ; 323	Olsen et al.	1964
	---; nests of woodrat built beneath loose stone along lime outcrops, feed at night; 323°	Grundemann	1947
	---; experimentally infected with <i>Trypanosoma cruzi</i> ; 323	Usinger	1944
	---; all year; 323	Froeschner	1944
	---; ---; 323*	Wood	1941
<i>sanguisuga ambigua</i> Neiva	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Neiva & Lent	1941
	---; experimentally infected with <i>Trypanosoma cruzi</i> ; 323°	Packchanian	1940

TABLE 1 - BUGS (conclusion)

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>TRIATOMA</i> <i>sanguisuga</i> <i>indictiva</i> Neiva	---; experimentally infected with <i>Trypanosoma cruzi</i> ; 323	Usinger	1944
<i>whieri</i> Neiva	---; nymph and adult bites man at night, bite causes swelling, rash and fever, enter houses in May and June; 323 <sup>3</sup>	Wehrle	1939
	---; naturally infected with <i>Trypanosoma cruzi</i> ; 323	Packchanian	1940
<i>TRIPHLEPS</i> <i>insidiosus</i> (Say)	---; ---; 351°	Strong et al.	1926

TABLE 2 - SUMMARY OF DISEASES OR DISEASE ORGANISMS TRANSMITTED BY BUGS

SPECIES	DISEASE ORGANISM				DISTRIBUTION
	VIRUS &	RICKETTSIA	PROTOZOA	HELMINTHS	
	:	:	:	:	
<i>PARATRIATOMA</i>					
<i>hirsuta</i> Barber		Chagas' disease			323
<i>TRIATOMA</i>					
<i>gerstaeckeri</i> (Stål)		Chagas' disease			323
<i>heidemanni</i> Neiva		Chagas' disease			323
<i>indistincta</i> Neiva		Chagas' disease			323
<i>longipes</i> Barber		Chagas' disease			323
<i>protracta</i> (Uhler)			Sensitized reactions		323 (Walsh & Jones, 1962)
		Chagas' disease			323

J. URTICATING AND VESICATING ARTHROPODS

The entries for urticating and vesicating arthropods are surprisingly few.  
Only 9 species are listed.

TABLE 1 - URTICATING AND STIMULATING ARTHROPODS

SPECIES	BREEDING HABITATS; ADULT ACTIVITY; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>APATELA americana</i> Harris	---; ---; 323*	Larson	1927

#### K. TICKS

The tick entries seldom include information on the immature forms separately from the adults. In fact, most of the entries contain only distributional data.

Ticks are important livestock pests in America; also, some serious disease organisms are transmitted by ticks. In the table are listed 110 species or subspecies.

TABLE 1 - TICKS

SPECIES	SPECIFIC NOTES; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>AMBYLOMMA americanum</i> (Linnaeus)	Among grasses; 62. ---; 323*	Gregson	1956
	Suspected vector of Rocky Mountain spotted fever, tularemia and Bullis fever, naturally infected with causative organism of Rocky Mountain spotted fever, American Q fever; 323°	Cooley & Kohls	1944 a
	Vector of spotted fever, potential vector of tularemia, abundant in woodlands, active February-Sept., peak late May or early July; 323	Brennan	1945
	Attached to man in all its active stages, naturally infected with <i>Rickettsia diaphorica</i> ; 323*°	Bishopp & Trembley	1945
	Experimental transmission of <i>Bacterium tularensis</i> , possible vector of spotted fever; 323	Parker	1934
	Experimental transmission of Rocky Mountain spotted fever; 323	Bequaert	1946
	Experimental transmission of tularemia; 323	Parker et al.	1937
	---; 323**	Ransmeier	1949
<i>avecolor</i> Cooley & Kohls	---; 323	Cocley & Kohls	1944 a
<i>caeruleense</i> (Fabricius)	---; 62°	Gregson	1956
	Experimental carrier of Rocky Mountain spotted fever; 323	Philip	1939 a
	Active all year; 323°	Bishopp & Trembley	1945
<i>dissimile</i> Koch	---; 323	Cooley & Kohls	1944 a
<i>inornatum</i> (Banks)	---; 323	Cocley & Kohls	1944 a
<i>maculatum</i> Koch	Naturally infected with Rocky Mountain spotted fever; 323	Bequaert	1945
	Abundant within 100 miles of the coast; 323	Bishopp & Trembley	1945
	Active during summer; 323	Hixson	1939
	---; 323*	Gregson	1956
	---; 323°	Cooley & Kohls	1944 a
<i>ovale</i> Koch	---; 323	Edney & Joyce	1942

L. MITES

The entries for mites include a wide variety of species, most of which seldom bite man. For the most part, there are no biological entries. The Trombiculid entries are, of course, for larval stages. Most of the others will be for various stages, but mostly for adults.

There are 78 species or subspecies recorded in the tables.

TABLE I - MILES

SPECIES	SPECIFIC NOTES; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ACARISCUS brasiliensis</i> (Ewing)	---; 323°	Ewing	1943
<i>braziliensis</i> (Da Fonseca)	---; 323°	Ewing	1943
<i>flui</i> (Van Thiel)	---; 323°	Ewing	1943
<i>lorninis</i> (Ewing)	---; 323°	Ewing	1943
<i>masoni</i> Ewing	---; 323°	Ewing	1943
<i>ALLODERMANYSSUS sanguineus</i> (Hirst)	In houses or in apartments "causing rash"; 323*° Naturally infected with <i>Rickettsia akari</i> , experimental transmission of rickettsia; 323	Pratt et al. Baker et al.	1949 1956
<i>BDELLONYSSUS bacoti</i> (Hirst)	Abundant in houses, bites readily, bite is painful burning or itching, abundant during winter; 323° Experimental vector and natural host of endemic typhus; 323 (Prefers darkness although it moves freely by day, active all year) Experimentally infected with <i>Bacterium tularensis</i> ; 323	Strandtmann & Eben Browning Hopla	1953 1950 1951
<i>sylvianus</i> (Canestrini & Fanzago)	Naturally infected with St. Louis encephalitis and western equine encephalitis; 323	Reeves et al.	1955
<i>DERMANYSSUS americanus</i> Ewing	Western equine encephalomyelitis recovered; 323	Baker et al.	1956
<i>gallinae</i> (De Geer)	Natural and experimentally infected with St. Louis encephalitis, naturally infected with eastern and western equine encephalomyelitis; 323 (Causes painful skin irritations) Experimental transmission of St. Louis encephalitis; 323 ---; 323°	Baker et al. Reeves et al. Miller	1956 1955 1925
<i>DERMATOPHAGOIDES scheremetewskyi</i> Bognow	Infest scalp and other parts of body, July and Aug.; 323*°	Traver	1951

TABLE 1 - MITES (continued)

SPECIES	SPECIFIC NOTES; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>EUTROMBICULA</i> <i>alfredodusgesi</i> (Oudemans)	Field, experimental transmission of scrub typhus; 323 ---; 323°	Jenkins Fuller	1948 1952
<i>batatas</i> (Linnaeus)	---; 323	Fuller	1952
<i>harperi</i> Ewing	---; 323	Radford	1942
<i>masoni</i> Ewing	Field, experimental transmission of scrub typhus; 323	Jenkins	1948
<i>myocis</i> Ewing	---; 323	Radford	1942
<i>tropica</i> (Ewing)	---; 323	MacCreary	1945
<i>GLYCYPHAGUS</i> <i>domesticus</i> De Geer	---; 26°	Zakhvatkin	1941
<i>LIPONYSSUS</i> <i>bacoti</i> (Hirst)	In buildings and stores, active by night and hide in crevices and cracks, by day, bite is irritating, common in winter and spring; 62° In houses nightly, on warm walls near steam pipes; 323° (Vector of endemic typhus)	Spencer Mackie	1937 1937
	Experimental vector of Coxsackie virus; 323	Schwab et al.	1952
	Experimental transmission of endemic typhus; 323	Dove & Shelmire	1931
	Experimental vector of Rickettsialpox; 323	Philip & Hughes	1948
<i>bursa</i> Berlese	In houses, spring; 62	Spencer	1930
<i>ORWITHONYSSUS</i> <i>bacoti</i> (Hirst)	Murine typhus have been recovered, natural and experimental transmission of murine typhus, experimental transmission of <i>Pasteurella pestis</i> , experimentally infected with coxsackie virus and tularemia; 323 (Produce irritation and sometimes painful dermatitis)	Baker et al.	1956
<i>bursa</i> (Berlese)	---; 323 (Cause discomfort)	Baker et al.	1956

TABLE 1 - MITES (continued)

SPECIES	SPECIFIC NOTES; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>ORNITHONYSSUS</i> <i>sylvarium</i> (Canestrini & Fanzago)	Western equine encephalomyelitis and St. Louis encephalitis have been recovered; 323 (Cause itching by its bite and crawling on the skin)	Baker et al.	1956
<i>PEDICULOIDES</i> <i>ventricosus</i> (Newport)	---; 323°	Webster	1910
<i>PYEMOTES</i> <i>ventricosus</i> (Newport)	Cause eruptions, the lesions itch severely, as many as 200-300 bites have been reported, some fever, malaise, vomiting, backache, secondary infections and regional lymphadenopathy has occurred; 323°	Baker et al.	1956
<i>SARCOPTES</i> <i>canis</i> Gerlach	---; 323°	Miller	1925
<i>equi</i> Gerlach	---; 323°	Miller	1925
<i>scabiei</i> De Geer	---; 323°	Miller	1925
<i>TROMbicula</i> <i>alaskensis</i> Brennan	---; 5	Wharton	1952
<i>alfreddugesi</i> (Oudemans)	---; 62, 323 (Pestiferous to men, bites cause severe inflammatory reaction)	Jenkins	1949
	April-November; 323	Wharton	1951
	---; 351°	Jenkins	1949 a
<i>alfreddugesi</i> <i>tropica</i> (Ewing)	---; 323°	Jenkins	1949 a
<i>apiodontiae</i> Brennan	---; 323	Brennan	1946
<i>butatas</i> (Linnaeus)	July-Oct.; 323	Baker et al.	1956
	---; 323°	Jenkins	1949 a
<i>belkini</i> Gould	---; 323°	Wharton	1952
<i>bisignata</i> Ewing	---; 323	Brennan & Wharton	1950

TABLE 1 - MITES (continued)

SPECIES	SPECIFIC NOTES; DISTRIBUTION (GENERAL STATEMENTS)	AUTHOR	DATE
<i>THOMBICULA</i> <i>blarinæ</i> Ewing	---; 323	Ewing	1931
<i>browni</i> Brennan	---; 323	Brennan & Wharton	1950
<i>californica</i> Ewing	Jan.; 62. Jan., April, July; 323	Ewing	1942
<i>carterae</i> Brennan	---; 323	Brennan & Wharton	1950
<i>cavicolæ</i> Ewing	---; 62, 323	Brennan & Wharton	1950
<i>cinnabaris</i> Ewing	---; 323	Ewing	1925
<i>cynos</i> Ewing	---; 323	Ewing	1937
<i>dinehartæ</i> Brennan & Wharton	---; 323	Brennan & Wharton	1950

13. ABSTRACT The occurrence of insects and other arthropods of medical importance in America North of Mexico is summarized on the basis of review of most of the available references in the scientific literature. The report includes, for each major group of arthropods, a listing of species and subspecies with biological and distributional data, tabulations of diseases or disease organisms transmitted, and literature citations.  The groups of arthropods included, with the number of species or subspecies in parentheses, are: Mosquitoes (361), Black flies (234), Sard flies (13), Midges (122), Horse flies (554), Biting flies (4), Non-biting flies (45), Fleas (543), Bugs (30), Urticating and vesicating arthropods (9), Ticks (110), Mites (78), and Miscellaneous arthropods (17).
